Hey everyone I decided I wanted to make egglocke on Pokemon xAnd I need a few eggs to do it since I get those eggs... I hope from you people. Don't worry, there will be no trade involved (Thankfully) all you really need in order to send me an egg gmail account (you can make a new one for that) and pkhex (PC required) Rules can't be legendary or mythical Pokemon Must be Level 1 Should be a legitimate Pokemon in x and y Don't put any illegal items on pokemon will give a step-by-step process about that how you can make and send me an egg (if you know how to make a legitimate egg in pokemon x and u skip step 7)Step 1 get pkhex and open itPkhex link (PC only) Download pkhex via link, then open the file. The file that you will be looking to open should look like thisStep 2 choose Pokemon to put in eggWhen you open pkhex up it should look like something like thisThe first thing you want to do is rekaroll Burton change PID (required) Then you want to click on the views and choose any base of 1 Pokemon, which is not legendary for this example I will be collecting Eevee (make sure also that too check the egg box Step 3 StatsPick any nature you want and any of the available abilities, and if you want, you can give it an item (just keep the item legit)Now click on the stats table and you have to see itWhat you want to do here, it's just to click randomize IV until you see the IV set you like and if you want to So you can change what the hidden power it gets (just don't click Randomize IV don't have evSteps 4 a few side thingsNow click on the met tab and change everything to look like thisAlso make sure to go back to the mainstream and change the country south of the region and 3ds regionStep 5 attacksNow here's a good part. that moves you want on Pokemon (make sure it's legal) and the one you chose moves click on the text that says: Relearn moves and the box will pop up what looks like thisClick yesStep 6 saving Pokemon FileRight click here and click save as you can save it anywhere you want on your computer, but make sure you want to call the egglocke file on) so you can find it betterStep 7 sending eggGo to you Gmail on any of your preferred browsers on your PCHit to make up the button now the email will look like something like thisNext click the paperclip at the bottom of the email and put the egg file in (you can send ME UP TO 3 EGGS) After the files are in hit sendOnce I have enough eggs I will start egglocke. I hope you help me with this and have a good day. (Also, if you want to see me doing egglocke to follow me). Applied to: New Nintendo 3DS, New Nintendo 3DS XL, New Nintendo 2DS XL, Nintendo 3DS, Nintendo 3DS XL, Nintendo 2DS Info in this article can help you when controls won't react after downloading a save point in Pokemon Pokemon And Pokemon Y. Thank you so much for playing and enjoying the Pokemon series. A problem with Pokemon X and Pokemon Y games released for Nintendo 3DS on October 12, 2013 was found. Once a player saves a game in certain areas and then reboots a save file, the controls can become unresponsive. The update was done that will prevent this, and will solve the problem for players who have already experienced it. The problem is in some rare cases, if a player saves a game in certain areas of Lumiose City (see map below), then the game ends, the controls will not react when the saved game restarts. To avoid this Please download the update available through Nintendo eShop. The update will prevent this and will solve the problem for players who have already experienced it. If you don't have internet access and you can't download the update, please make sure you don't save the game while you're in the areas marked on the map below (blue area). You can still save the game elsewhere in Lumiose City, including inside buildings such as Pokemon Centers. A solution for players already experiencing this upgrade problem has been available, which will solve this problem for players who have already experienced it. 2014-5-17 I downloaded Pokemon Sacred Gold ROM, and I also downloaded pokemon sacred golden egglocke batteries to keep the file from the Internet. Rum boots up perfectly however the battery save file (which is exactly the same name as the ROM and ends with .dsv) doesn't seem to work. But we are also encouraged by the stories of our readers to find help through our website. In these difficult times, we guarantee that we will work tirelessly to support you. We will continue to provide you with accurate and timely information throughout the crisis, and we will fulfill our mission to help everyone in the world learn how to do anything - no matter what. Thank you to our community and all our readers who are working to help others in this time of crisis, and to all those who make personal sacrifices for the benefit of their communities. We're going to get through this together. Sincerely, Elizabeth Douglas, WikiKa. Download and install the Nintendo DS emulator. Because Sacred Gold and Storm Silver are Fan Mods of HeartGold and SoulSilver, they can only be played through the Nintendo DS emulator. You can install an emulator on your computer, or you can install it on your Android or jailbroken iOS device. There are several emulators available depending on the operating system and the device you are using. No matter what you're installing the emulator on, you'll still have to use your Windows computer to create a game file. Windows and Mac - The two most popular Nintendo DS emulators are DeSmuME (Windows and Mac) and NOSGBA (Windows only). You can download DeSmuME from and NOSGBA by problemkaputt.de/gba.htm.Android - There are several DS emulators available for Android, including DraStic, nds4roid, and NDS Outdoor Emulator. All of them are available on the Google Play Store. iOS - You'll need to download and install nds4ios, which is the port of DeSmuME. Jailbreaking your device will void your warranty and can cause stability problems. If your device is jailbroken, you can get nds4ios from cydia.myrrepospace.com/Gamer6401/ storage in Cydia.
