(Page - 2)

Q.2 A and B complete a work in 30 days. B and C complete the same work in 24 days whereas C and A complete the same work in 28 days. Based on these statements which of the following conclusions is correct?

Options 1.

C is the most efficient and B is the least efficient.

2.

B is the most efficient but, the least efficient one cannot be determined.

3.

C is the most efficient but, the least efficient one cannot be determined.

4

C is the most efficient and A is the least efficient.

Chosen Option: 1

Q.16 For any two metric spaces $(X, d_X), (Y, d_Y)$ a map $f: X \to Y$ is said to be a closed map if whenever F is closed in X, then f(F) is closed in Y. For any subset B of a metric space, B is given the induced metric. The metric on $X \times Y$ is given by $d((x,y),(x',y')) = \max\{d_X(x,x'),d_Y(y,y')\}$. Which of the following are true?

Options 1.

For any subset $A \subseteq X$ the inclusion map $i: A \to X$ is closed

The projection map $p_1: X \times Y \to X$ given by $p_1(x, y) = x$ is closed

Suppose that $f: X \to Y$, $g: Y \to Z$ are continuous maps. If $g \circ f: X \to Z$ is a closed map then $g|_{f(X)}: f(X) \to Z$ is closed. Here $g|_{f(X)}$ means the map g restricted to f(X)

If $f: X \to Y$ takes closed balls into closed sets then f is closed

Q.5 Let n be a positive integer and F be a non-empty proper subset of $\{1,2,...,n\}$. Define

 $(x, y)_F = \sum_{k \in F} x_k y_k, \ x = (x_1, ..., x_n), \ y = (y_1, ..., y_n) \in \mathbb{R}^n.$

Let $T = \{x \in \mathbb{R}^n : \langle x, x \rangle_F = 0\}$. Which of the following statements are true?

For $y \in \mathbb{R}^n$, $y \neq 0$

Options

1.
$$\inf_{x \in T} \langle x + y, x + y \rangle_F = \langle y, y \rangle_F$$

s
1.
$$\inf_{x \in T} \langle x + y, x + y \rangle_F = \langle y, y \rangle_F$$
2. $\sup_{x \in T} \langle x + y, x + y \rangle_F = \langle y, y \rangle_F$

$$\inf_{x \in T} \langle x + y, x + y \rangle_F < \langle y, y \rangle_F$$

4.
$$\sup_{x \in T} \langle x + y, x + y \rangle_F > \langle y, y \rangle_F$$

For the Fredholm integral equation

$$y(s) = \lambda \int_0^1 e^s e^t y(t) dt$$

Which of the following statements are true?

Options 1.

It has a non-trivial solution satisfying $\int_0^1 e^t y(t) dt = 0$

2.

Only the trivial solution satisfies $\int_0^1 e^t y(t) dt = 0$

- 3. It has non-trivial solution for all $\lambda \neq 0$
- 4.

It has non-trivial solutions only if $\lambda = \frac{2}{e^2 - 1}$ and $\int_0^1 e^t y(t) dt \neq 0$

Q.38 Fix a $\alpha \in (0,1)$. Consider the iteration defined by

(*)
$$x_{k+1} = \frac{1}{2}(x_k^2 + \alpha), \qquad k = 0, 1, 2, \dots$$

The above iteration has two distinct fixed points ζ_1 and ζ_2 such that

$$0<\zeta_1<1<\zeta_2.$$

Which of the following statements are true?

Options 1.

The iteration (*) is equivalent to the recurrence relation

$$x_{k+1} - \zeta_1 = \frac{1}{2}(x_k + \zeta_1)(x_k - \zeta_1), \quad k = 0, 1, 2, \dots$$

2

The iteration (*) is equivalent to the recurrence relation

$$x_{k+1} - \zeta_1 = \frac{1}{2}(x_k + \zeta_2)(x_k - \zeta_1), \quad k = 0, 1, 2, \dots$$

3. If
$$0 \le x_0 < \zeta_2$$
 then $\lim_{k \to \infty} x_k = \zeta_1$

4. If
$$-\zeta_2 < x_0 \le 0$$
 then $\lim_{k \to \infty} x_k = \zeta_1$

Consider the function $f:[0,1] \to \mathbb{R}$ defined by

$$f(x) := \begin{cases} 2^{-\left\{1 + \left(\log_2\left(\frac{1}{x}\right)\right)^{\frac{1}{\beta}}\right\}^{\beta}} & \text{for } x \in (0, 1] \\ 0 & \text{for } x = 0 \end{cases}$$

where $\beta \in (0, \infty)$ is a parameter. Consider the iterations

$$x_{k+1} = f(x_k)$$
 , $k = 0, 1, \dots; x_0 > 0$.

Which of the following statements are true about the iteration?

Options 1.

For $\beta=1,$ the sequence $\{x_k\}$ converges to 0 linearly with asymptotic rate of convergence $\log_{10}2$

2.

For $\beta > 1$, the sequence $\{x_k\}$ does not converge to 0

3.

For $\beta \in (0,1)$, the sequence $\{x_k\}$ converges to 0 sublinearly

4.

For $\beta \in (0,1)$, the sequence $\{x_k\}$ converges to 0 superlinearly
