# Florida Building Code, Seventh Edition (2020) - Energy Conservation C401.2 (1) ASHRAE 90.1 2016 Appendix G

Applications for	compliance with the Florida Building Code, Energy Conservation shall include:
	This Checklist
	The full compliance report generated by the software that contain the project summary, compliance summary, certifications and detailed component compliance reports.
	Boxes appropriately checked in the Mandatory Section of the compliance report
	Input Report *
0 1	t file (aka ECB Checklist) not generated. Append ECB Checklist to Florida Compliance Report.

		Project Summary	
Description:			
Owner:	Owner		
Address 1:	123 Main Street	City:	Miami
Address 2:		State:	Florida
		Zip:	
		Class:	
Jurisdiction:			
Conditioned Area:	22500.0	Conditioned & Unconditioned Area	22500.0
No of Stories:	0.0	Area Entered from Plans:	0.0
Permit No:	123456789		

Building Rotation: 0.0 Degrees Anticlockwise from North

Certifications					
I hereby certify that the plans and specifications covered by this calculation are in compli	ance with the Florida Energy Code				
Prepared By:	Building Official:				
Date:	Date:				
I certify that this building is in compliance with the Florida Energy Efficiency Code					
Owner Agent:	Date:				
If required by Florida law, I hereby certify (*) that the system design is in compliance with	the Florida Energy Efficiency Code				
Architect:	Reg No:				
Electrical Designer:	Reg No:				
Lighting Designer:	Reg No:				
Mechanical Designer:	Reg No:				
Plumbing Designer:	Reg No:				
(*) Signature is required where Florida Law requires design to be performed by registere	d design professionals.				
Typed names and registration numbers may be used where all relevant information is co	ntained on signed/sealed plans.

# Energy and Cost Summary by Fuel Type\*

		Propose	d Building	Baseline Building	
	Energy Type	Energy (kBtu/yr)	Energy Cost (£/yr)	Energy (kBtu/yr)	Energy Cost (£/yr)
Regulated Energy				(	
Lighting	Electricity	19,270.6		19,077.9	
Space heating	Gas	359.1		0	
Space heating	Electricity	0		104.4	
Space cooling	Electricity	24,462.9		84,825.6	
Fans	Electricity	5,733.3		14,357.6	
Heat rejection	Electricity	1,561.5		5,414.4	
Total Regulated Electric Energy		51,028.3	16,118.3	123,779.9	38,933.8
Total Regulated Gas Energy		359.1	45.6	0	0
Total Regulated Energy		51,387.4	16,163.9	123,779.9	38,933.8
Unregulated Energy	]				
Office equipment	Electricity	28,905.9		27,488.0	
Total Unregulated Electric Energy		28,905.9	9,385.3	27,488.0	9,096.4
Total Unregulated Gas Energy		0	0	0	0
Total Unregulated Energy		28,905.9	9,385.3	27,488.0	9,096.4
Total Energy		80,293.3	25,549.2	151,267.9	48,030.3

#### Performance Cost Index Target

Variable	Description	Value	Source
BBUEC	Baseline Building Unregulated Energy Cost (£)	9,096.4	Energy and Cost Summary by Fuel Type Table
BBREC	Baseline Building Regulated Energy Cost (£)	38,933.8	Energy and Cost Summary by Fuel Type Table
BBP	Baseline Building Performance (Energy Cost) (£)	48,030.3	Energy and Cost Summary by Fuel Type Table
BPF	Total Area Weighted Building Performance Factor	0.62	Space Summary Table
PCI <sub>t</sub>	Performance Cost Index Target	0.69	[BBUEC + (BBREC × BPF)]/BBP

#### Energy Summary by End Use\*

	Proposed Building		Budget	Performance Cost Index (PCI)		
	Energy Use	Energy Cost	Energy Use	Energy Cost	Proposed Cost /	
	(kBtu/yr)	(£/yr)	(kBtu/yr)	(£/yr)	Baseline Cost	
Electricity	79,934.2	25,503.6	151,267.9	48,030.3	0.53	
Gas	359.1	45.6	0	0	0	
Total ex Onsite Generation	80,293.3	25,549.2	151,267.9	47,966.79	0.53	
Total inc Onsite Generation	80,293.3	25,549.2	151,267.9	47,966.79	0.53	
	'Total inc Onsite Generation' PCI less than or equal to PCI <sub>t</sub> ? (Yes/No)					

\* These results use assumptions for showing compliance during a typical year; actual energy costs may be substantially different.

#### Notes

The results are based on 8760 simulated hours

5 Rooms included in the unmet load hours check

#### **Lighting Controls**

Room	Thermal Template	Area	Result
Room 008	SPACE: Office - Open plan	188.1	FAILED
Room 017	SPACE: Office - Open plan	188.1	FAILED
Room 016	SPACE: Office - Open plan	188.1	FAILED
Room 010	SPACE: Office - Open plan	1337.8	FAILED
Room 015	SPACE: Office - Open plan	188.1	FAILED

#### **HVAC System Compliance**

Торіс	Section	Component	Description	Yes	N/A	Exempt
			ecked by Designer or Engineer			-
Insulation	C303.2	Envelope	Below-grade wall insulation per manufacturer's instructions.			
Insulation	C303.2	Envelope	Slab edge insulation installed per manufacturer's instructions.			
Insulation	C303.2	Envelope	Above-grade wall insulation installed per manufacturer's instructions.			
Insulation	C402.3	Envelope	High-albedo roofs satisfy one of the following: 3-year-aged solar reflectance $>=0.55$ and thermal emittance $>=0.75$ or 3-year-aged solar reflectance index $>=0.64$			
Fenestration	C402.4.4	Envelope	U-factor of opaque doors associated with the building thermal envelope meets requirements.			
SYSTEM_SPECIFIC	C403.2.12.1	Mechanical	HVAC fan systems at design conditions do not exceed allowable fan system motor nameplate hp or fan system bhp.			
SYSTEM_SPECIFIC	C403.2.12.2	Mechanical	HVAC fan motors not oversized beyond allowable limits.			
SYSTEM_SPECIFIC	C403.2.3(8) Table	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement meet those listed in Table C403.2.3(8)			
HVAC	C403.2.7	Mechanical	Exhaust air energy recovery on systems meeting Table C403.2.7(1) and C403.2.7(2).			
SYSTEM_SPECIFIC	C403.3	Mechanical	Air economizers provided where required, meet the requirements for design capacity, control signal, ventilation controls, high-limit shut-off, integrated economizer control, and provide a means to relieve excess outside air during operation.			
SYSTEM_SPECIFIC	C403.3.2	Mechanical	Economizer operation will not increase heating energy use during normal operation.			
SYSTEM_SPECIFIC	C403.3.4, C403.3.4.1, C403.3.4.2, C403.3.1	Mechanical	Water economizers provided where required, meet the requirements for design capacity, maximum pressure drop and integrated economizer control.			
SYSTEM_SPECIFIC	C403.4.2.1	Mechanical	Three-pipe hydronic systems using a common return for hot and chilled water are not used.			
SYSTEM_SPECIFIC	C403.4.2.3.1	Mechanical	Hydronic heat pump systems connected to a common water loop meet heat rejection and heat addition requirements.			
SYSTEM_SPECIFIC	C403.4.3.4	Mechanical	Open-circuit cooling towers having water cooled chiller systems and multiple or variable speed condenser pumps, are designed so that tower cells can run in parallel with larger of flow criteria.			
SYSTEM_SPECIFIC	C404.2	Mechanical	Service water heating equipment meets efficiency requirements.			
Wattage	C405.3	Interior Lighting	Exit signs do not exceed 5 watts per face.			

Торіс	Section	Component 2. To be	Description checked by Plan Reviewer	Yes	N/A	Exempt
Plan Review	C103.2	Envelope	Plans and/or specifications provide all information with which compliance can be determined for the building envelope and document where exceptions to the standard are claimed.			
Plan Review	C103.2	Mechanical	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the mechanical systems and equipment and document where exception to the standard are claimed. Load calculations per acceptable engineering standards and handbooks.	ns		
Plan Review	C103.2	Mechanical	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the service water heating systems and equipment and document where exceptions to the standard are claimed. Hot water system sized per manufacturer's sizing guide.	, 🗌		
Plan Review	C103.2	Interior Lighting	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the interior lighting and electrical systems and equipment and document where exceptions to the standard are claimed. Information provided should include interior lighting power calculations, wattage of bulbs and ballasts, transformers and control devices.			
Plan Review	C103.2	Exterior Lighting	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the interior lighting and electrical systems and equipment and document where exceptions to the standard are claimed. Information provided should include exterior lighting power calculations, wattage of bulbs and ballasts, transformers and control devices.			
Insulation	C402.2.5	Envelope	Slab edge insulation depth/length. Slab insulation extending away from building is covered by pavement or >= 10 inches of soil.			
Insulation	C402.2.6	Project	Radiant heating systems panels insulated to >=R-3.5 on face opposite space being heated.			
HVAC	C402.2.6	Mechanical	Thermally ineffective panel surfaces of sensible heating panels have insulation $\geq$ R-3.5.			
Insulation	C402.2.6	Envelope	Radiant panels and associated components, designed for heat transfer from the panel surfaces to the occupants or indoor space are insulated with a minimum of R-3.5.			
Air Leakage	C402.5.7	Envelope	Vestibules are installed on all building entrances . Doors have self-closing devices.			
SYSTEM_SPECIFIC	C403.2.12.3	Mechanical	Fans have efficiency grade (FEG) >= 67. The total efficiency of the fan at the design point of operation <= $15\%$ of maximum total efficiency of the fan.			
HVAC	C403.2.13	Mechanical	Unenclosed spaces that are heated use only radiant heat.			
HVAC	C403.2.4.2	Mechanical	Each zone equipped with setback controls using automatic time clock or programmable control system.			
SYSTEM_SPECIFIC	C403.2.4.4	Mechanical	Zone isolation devices and controls installed where applicable.			

# Compliance Forms | Florida Compliance Report

SYSTEM_SPECIFIC	C403.2.4.7	Mechanical	Fault detection and diagnostics installed with air-cooled unitary DX units having economizers.		
SYSTEM_SPECIFIC	C403.2.5	Mechanical	Hot water boilers supplying heat via one- or two-pipe systems include outdoor setback control.		
HVAC	C403.2.6.1	Mechanical	Demand control ventilation provided for spaces >500 ft2 and >25 people/1000 ft2 occupant density and served by systems with air side economizer, auto modulating outside air damper control, or design airflow >3,000 cfm.		
SYSTEM_SPECIFIC	C403.4.1.1	Mechanical	Hydronic and multizone HVAC system controls areVAV fans driven by mechanical or electrical variable speed drive per Table C403.4.1.1.		
SYSTEM_SPECIFIC	C403.4.1.3	Mechanical	Reset static pressure setpoint for DDC controlled VAV boxes reporting to central controller based on the zones requiring the most pressure.		
SYSTEM_SPECIFIC	C403.4.2	Mechanical	Temperature reset by representative building loads in pumping systems for chiller and boiler systems >500,000 Btu/h.		
SYSTEM_SPECIFIC	C403.4.2.3.2.1	Mechanical	Closed-circuit cooling tower within heat pump loop have either automatic bypass valve or lower leakage positive closure dampers. Open-circuit tower within heat pump loop have automatic valve to bypass all heat pump water flow around the tower.		
SYSTEM_SPECIFIC	C403.4.2.4	Mechanical	Hydronic systems greater than 500,000 Btu/h designed for variable fluid flow.		
SYSTEM_SPECIFIC	C403.4.2.5	Mechanical	System turndown requirement met through multiple single-input boilers, one or more modulating boilers, or a combination of single-input and modulating boilers. Boiler input between 1.0 MBtu/h and 5 MBtu/h has 3:1 turndown ratio, boiler input between 5.0		
SYSTEM_SPECIFIC	C403.4.2.6	Mechanical	Chilled water plants with multiple chillers have capability to reduce flow automatically through the chiller plant when a chiller is shut down. Boiler plants with multiple boilers have the capability to reduce flow automatically through the boiler plant.		
SYSTEM_SPECIFIC	C403.4.3 C403.4.3.2	Mechanical	Fan systems with motors >=7.5 hp associated with heat rejection equipment to have capability to operate at 2/3 of full-speed and auto speed controls to control the leaving fluid temperature or condensing temp/pressure of heat rejection device.		
SYSTEM_SPECIFIC	C403.4.4.5	Mechanical	Multiple zone HVAC systems have supply air temperature reset controls.		
SYSTEM_SPECIFIC	C403.4.4.6	Mechanical	Multiple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.		

# Compliance Forms | Florida Compliance Report

SYSTEM_SPECIFIC	C404.2.1	Mechanical	Gas-fired water-heating equipment installed in new buildings: where a singular piece of water-heating equipment >= 1,000 kBtu/h serves the entire building, thermal efficiency >= 90 Et. Where multiple pieces of water-heating equipment serve the building with combined rating is >= 1,000 kBtu/h, the combined input-capacity-weighted-average thermal efficiency , thermal efficiency must be >= 90 Et. Exclude input rating of equipment in individual dwelling units and equipment <= 100 kBtu/h.		
SYSTEM_SPECIFIC	C404.4	Mechanical	All piping insulated in accordance with section details and Table C403.2.10.		
SYSTEM_SPECIFIC	C404.5 C404.5.1 C404.5.2	Mechanical	Heated water supply piping conforms to pipe length and volume requirements. Refer to section details.		
SYSTEM_SPECIFIC	C404.6.3	Mechanical	Pumps that circulate water between a heater and storage tank have controls that limit operation from startup to <= 5 minutes after end of heating cycle.		
SYSTEM_SPECIFIC	C404.7	Mechanical	A water distribution system having one or more recirculation pumps that pump water from a heated-water supply pipe back to the heated-water source through a cold-water supply pipe shall be a demand recirculation water system. Pumps shall have controls that comply with both of the following: The control shall start the pump upon receiving a signal from the action of a user of a fixture or appliance, sensing the presence of a user of a fixture or sensing the flow of hot or tempered water to a fixture fitting or appliance. The control shall limit the temperature of the water entering the cold-water piping to 104F (40C)		
Wattage	C405.5.1	Exterior Lighting	Exterior lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are less than or equal to allowed watts.		
Plan Review	C405.6	Project	Group R-2 dwelling units have separate electrical meters.		
Plan Review	C406	Project	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the additional energy efficiency package options.		
SYSTEM_SPECIFIC	C408.2.2.2	Mechanical	HVAC hydronic heating and cooling coils have means to balance and have pressure test connections.		
SYSTEM_SPECIFIC	C408.2.2.2	Mechanical	HVAC hydronic heating and cooling coils have means to balance and have pressure test connections.

			3. To be checked by Inspector			
Inculation	C202.4	Favalana	Roof insulation installed per manufacturer's instructions.			
Insulation	C303.1	Envelope	Blown or poured loose-fill insulation is installed only where the roof slope is <=3 in 12.	$\Box$		
			Building envelope insulation is labeled with R-value or			
Insulation	C303.1	Envelope	insulation certificate providing R-value and other relevant			
			data.			
Fenistration	C303.1.3	Envelope	Fenestration products rated in accordance with NFRC.			
Fenistration	C303.1.3	Envelope	Fenestration products are certified as to performance labels or			$\square$
			certificates provided.			
	C303.2,		Floor insulation installed per manufacturer's instructions.			
Insulation	C402.2.4	Envelope	Cavity or structural slab insulation installed in permanent			
			contact with underside of decking or structural slabs.			
			Exterior insulation protected against damage, sunlight,			
Insulation	C303.2.1	Envelope	moisture, wind, landscaping and equipment maintenance			
			activities.			
			Exterior insulation is protected from damage with a protective			
Insulation	C303.2.1	Envelope	material. Verification for exposed foundation insulation may			
			need to occur during Foundation Inspection.			
Insulation	C402.1.3	Envelope	Non-swinging opaque doors have R-4.75 insulation.			
Insulation	C402.2.2	Envelope	Skylight curbs are insulated to the level of roofs with	$\square$	$\Box$	$\square$
			insulation above deck or R-5.	$\Box$	$\cup$	$\Box$
			Insulation intended to meet the roof insulation requirements			
Insulation	C402.2.2	Envelope	cannot be installed on top of a suspended ceiling. Mark this			
			requirement compliant if insulation is installed accordingly.	_	_	_
			Building envelope contains a continuous air barrier that has	_		_
Air Leakage	C402.5	Envelope	been tested and deemed to limit air leakage <= 0.40 cfm/ft2.	$\cup$	$\cup$	$\Box$
			The building envelope contains a continuous air barrier that is			
	0400 5 4	Freedow	sealed in an approved manner and either constructed or tested in			
Air Leakage	C402.5.1	Envelope	an approved manner. Air barrier penetrations are sealed in an	$\Box$	$\cup$	$\Box$
			approved manner.			
			All sources of air leakage in the building thermal envelope are			
Air Leakage	C402.5.1.1	Envelope	sealed, caulked, gasketed, weather stripped or wrapped with	$\square$	$\Box$	
			moisture vapor-permeable wrapping material to minimize air	$\cup$	$\cup$	$\cup$
			leakage.			
			The building envelope contains a continuous air barrier that is			
Air Leakage	C402.5.1.2.1	Envelope	sealed in an approved manner and material permeability <=	$\square$	$\Box$	$\square$
			0.004 cfm/ft2. Air barrier penetrations are sealed in an approved manner.			
			The building envelope contains a continuous air barrier that is	~-		
Air Leakage	C402.5.1.2.2	Envelope	sealed in an approved manner and average assembly air leakage - 0.04 cfm/ft2. Air barrier penetrations are sealed in an			
			approved manner.			
	C402.5.2,		Factory-built fenestration and doors are labeled as meeting air			
Air Leakage	C402.5.2, C402.5.4	Envelope	leakage requirements.			

Air Leakage	C402.5.3	Envelope	In Climate Zones 3 through 8, where open combustion air ducts provide combustion air to open combustion space conditioning fuel-burning appliances, the appliances and combustion air openings shall be located outside of the building thermal envelope or enclosed in a room isolated from inside the thermal envelope.		
Air Leakage	C402.5.5, C403.2.4.3	Envelope	Stair and elevator shaft vents have motorized dampers that automatically close.		
Air Leakage	C402.5.5, C403.2.4.3	Envelope	Outdoor air and exhaust systems have motorized dampers that automatically shut when not in use and meet maximum leakage rates. Check gravity dampers where allowed.		
Air Leakage	C402.5.6	Envelope	Weatherseals installed on all loading dock cargo doors.		
Air Leakage	C402.5.8	Envelope	Recessed luminaires in thermal envelope to limit infiltration and be IC rated and labeled. Seal between interior finish and luminaire housing.		
HVAC	C403.2.1	Mechanical	HVAC systems and equipment design loads calculated in accordance with ANSI/ASHRAE/ACCA Standard 183 or by an approved equivalent computational procedure.		
SYSTEM_SPECIFIC	C403.2.10	Mechanical	HVAC piping insulation thickness. Where piping is installed in or under a slab, verification may need to occur during Foundation Inspection.		
HVAC	C403.2.3	Mechanical	HVAC equipment efficiency verified.		
SYSTEM_SPECIFIC	C403.2.3	Mechanical	PTAC and PTHP with sleeves 16 in. by 42 in. labeled for replacement only as per Footnote b to Table C403.2.3(3).		
SYSTEM_SPECIFIC	C403.2.4.1	Mechanical	Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.		
SYSTEM_SPECIFIC	C403.2.4.1.1	Mechanical	Heat pump controls prevent supplemental electric resistance heat from coming on when not needed.		
HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5°F deadband.		
HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5°F deadband.		
HVAC	C403.2.4.1.3	Mechanical	Temperature controls have setpoint overlap restrictions.		
HVAC	C403.2.4.2.1, C403.2.4.2.2	Mechanical	Automatic Controls: Setback to 55°F (heat) and 85°F (cool); 7-day clock, 2-hour occupant override, 10-hour backup.		
SYSTEM_SPECIFIC	C403.2.4.2.3	Mechanical	Systems include optimum start controls.		
HVAC	C403.2.4.5, C403.2.4.6	Mechanical	Snow/ice melting system sensors for future connection to controls. Freeze protection systems have automatic controls installed.		
HVAC	C403.2.6.2	Mechanical	Enclosed parking garage ventilation has automatic contaminant detection and capacity to stage or modulate fans to 50% or less of design capacity.		

HVAC	C403.2.9	Mechanical	HVAC ducts and plenums insulated. Where ducts or plenums are installed in or under a slab, verification may need to occur during Foundation Inspection.		
SYSTEM_SPECIFIC	C403.2.9.1.3	Mechanical	Ductwork operating >3 in. water column requires air leakage testing.		
SYSTEM_SPECIFIC	C403.4.1.2	Mechanical	VAV fans have static pressure sensors located so controller setpoint <=1.2 w.c.		
SYSTEM_SPECIFIC	C403.4.2.2	Mechanical	Two-pipe hydronic systems using a common distribution system have controls to allow a deadband >=15°F, allow operation in one mode for at least 4 hrs before changeover, and have rest controls to limit heating and cooling supply temperature to <=30 °F.		
SYSTEM_SPECIFIC	C403.4.2.3.3	Mechanical	Two-position automatic valve interlocked to shut off water flow when hydronic heat pump with pumping system >10 hp is off.		
SYSTEM_SPECIFIC	C403.4.4.5, C403.4.4.5.1-4	Mechanical	Zone controls can limit simultaneous heating and cooling and sequence heating and cooling to each zone.		
SYSTEM_SPECIFIC	C403.4.5	Mechanical	Condenser heat recovery system that can heat water to 85°F or provide 60% of peak heat rejection is installed for preheating of service hot water.		
SYSTEM_SPECIFIC	C403.4.6	Mechanical	Hot gas bypass limited to: <=240 kBtu/h - 50% capacity, >240 kBtu/h - 25% capacity		
SYSTEM_SPECIFIC	C404.3	Mechanical	Heat traps installed on non-circulating storage water tanks.		
SYSTEM_SPECIFIC	C404.3	Mechanical	Heat traps installed on supply and discharge piping of non-circulating systems.		
SYSTEM_SPECIFIC	C404.3	Mechanical	Heat traps installed on supply and discharge piping of non-circulating systems.		
SYSTEM_SPECIFIC	C404.6.1	Mechanical	Controls are installed that limit the operation of a recirculation pump installed to maintain temperature of a storage tank. System return pipe is a dedicated return pipe or a cold water supply pipe.		
SYSTEM_SPECIFIC	C404.6.1, C404.6.2	Mechanical	Automatic time switches installed to automatically switch off the recirculating hot-water system or heat trace.		
SYSTEM_SPECIFIC	C404.9.1	Mechanical	Pool heaters are equipped with on/off switch and no continuously burning pilot light.		
SYSTEM_SPECIFIC	C404.9.2	Mechanical	Time switches are installed on all pool heaters and pumps.		
SYSTEM_SPECIFIC	C404.9.2	Mechanical	Time switches are installed on all pool heaters and pumps.		
SYSTEM_SPECIFIC	C404.9.3	Mechanical	Vapor retardant pool covers are provided for heated pools and permanently installed spas.		
Controls	C405.2.1	Interior Lighting	Lighting controls installed to uniformly reduce the lighting load by at least 50%.		
Controls	C405.2.1	Interior Lighting	Occupancy sensors installed in required spaces.		

# Compliance Forms | Florida Compliance Report

Controls	C405.2.1 C405.2.2.3	Interior Lighting	Independent lighting controls installed per approved lighting plans and all manual controls readily accessible and visible to occupants.		
Controls	C405.2.2.1	Interior Lighting	Automatic controls to shut off all building lighting installed in all buildings.		
Controls	C405.2.3	Interior Lighting	Daylight zones provided with individual controls that control the lights independent of general area lighting.		
Controls	C405.2.3, C405.2.3.1, C405.2.3.2	Interior Lighting	Primary sidelighted areas are equipped with required lighting controls.		
Controls	C405.2.3, C405.2.3.1, C405.2.3.3	Interior Lighting	Enclosed spaces with daylight area under skylights and rooftop monitors are equipped with required lighting controls.		
Controls	C405.2.4	Interior Lighting	Separate lighting control devices for specific uses installed per approved lighting plans.		
Wattage	C405.2.4	Interior Lighting	Additional interior lighting power allowed for special functions per the approved lighting plans and is automatically controlled and separated from general lighting.		
Controls	C405.2.5	Exterior Lighting	Automatic lighting controls for exterior lighting installed. Controls will be daylight controlled, set based on business operation time-of-day, or reduce connected lighting > 30%.		
Wattage	C405.4.1	Interior Lighting	Interior installed lamp and fixture lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are less than or equal to allowed watts.		
Mandatory Additinal Eff	C406.4	Project	Interior lighting in the building shall have the following enhanced lighting controls that shall be located, scheduled and operated in accordance with Section C405.2.2. Luminaires shall be capable of continuous dimming. Luminaires shall be capable of being addressed individually. Where individual addressability is not available for the luminaire class type, a controlled group of not more than four luminaries shall be allowed. Not more than eight luminaires shall be controlled together in a daylight zone. Fixtures shall be controlled through a digital control system that includes the following function: 4.1. Control reconfiguration based on digital addressability. 4.2. Load shedding. 4.3. Individual user control of overhead general illumination in open offices. 4.4. Occupancy sensors shall be capable of being reconfigured through the digital control system. Dedicate outdoor air system efficiency package: Buildings with		
Mandatory Additinal Eff	C406.6	Project	hydronic and/or multiple-zone HVAC systems are equipped with an independent ventilation system designed to provide >= 100-percent outdoor air to each individual occupied space, as specified by		

			Buildings shall be of the following types to use this			
			compliance method: Group R-1: Boarding houses, hotels or			
			motels. Group I-2: Hospitals, psychiatric hospitals and			
			nursing homes. Group A-2: Restaurants and banquet halls or			
			buildings containing food preparation areas. Group F:			
			Laundries. Group R-2: Buildings with residential occupancies.			
			Group A-3: Health clubs and spas. Buildings showing a service
