Jupyter notebook install package r

You can add R to Jupyter Notebook by typing this command in the Anaconda Prompt: `conda install -c r r-irkernel` But just in case you were wondering, here are the full steps to add R to Jupyter Notebook from scratch.Steps to Add R to Jupyter NotebookStep 1: Open the Anaconda PromptTo start, open the Anaconda Prompt.You'll then see the following screen with your user name:Step 2: Add R to JupyterNext, type/copy the following command in order to add R to Jupyter: `conda install -c r r-irkernel` The command would look like this in the Anaconda Prompt (press ENTER to proceed with the installation):You'll eventually see the following:Type 'y' and then press ENTER to proceed:After a short period of time your installation will be completed:Step 3: Launch Jupyter NotebookTo launch Jupyter Notebook, first open the Anaconda Navigator:Then, click on the button to launch Jupyter:Next, click on 'New' on the top right-hand-side of your screen:Finally, select 'R' from the drop-down list:You'll then see the following screen where you can type your code:Step 4: Run your CodeYou can now run your desired R code.For example, you can create a simple DataFrame in R using this syntax: `df(q)` Save workspace image? [y/n/c]: n It is also possible to install packages directly via a Jupyter Notebook. The drawback compared with the Terminal option above is the lack of interactivity. To be able to install into your local package library in your home directory, you have to make sure such a directory exists and tell the `install.packages` command – it is defined by `Sys.getenv("R_LIBS_USER")`. Otherwise you end up with errors like: Installing package into '/usr/local/lib/R/site-library' (as 'lib' is unspecified) Warning message in `install.packages("")`: "lib = "/usr/local/lib/R/site-library" is not writable" To install packages into your own collection of packages, run this in a notebook cell: `dir.create(path = Sys.getenv("R_LIBS_USER"), showWarnings = FALSE, recursive = TRUE)` `install.packages("", lib = Sys.getenv("R_LIBS_USER"), repos = "")` Credits: stack overflow post Note After installing a package, restart your Jupyter notebook kernel. Click "Kernel" then select "Restart kernel..." from the dropdown menu. Note If your `Sys.getenv("R_LIBS_USER")` already exists, a freshly started kernel will already know about it. You can check this by running `libPaths()`. If the first listed path starts with `/home/user/R/...` you can run `install.packages` without any errors. The above will install R packages for use with Sage worksheets (%r mode) and Jupyter notebooks using default R. The Sage binary may be built with a different release of R. Use R-sage instead of R to install packages for it. © Copyright 2021, Sagemath, Inc., CC BY-4.0 licensed.
