A minimum surrender value is guaranteed when the contract is terminated due to full surrender, death, or annuitization. This amount is calculated by:

- Taking 100% of aggregate purchase payments accumulated at the contract's non-forfeiture rate, which cannot be less than 1% or more than 3%, and
- Subtracting any prior aggregate withdrawals (including withdrawal charges) accumulated at the non-forfeiture rate, and
- Subtracting any withdrawal charges that apply at termination.

<sup>1</sup> Amounts allocated to any of the following strategies earn interest in arrears based, in part, on the performance of the S&P 500® Index (without dividends). Interest, if any, is credited at the end of each index term.

<sup>2</sup> This strategy credits interest when index performance is positive—up to a maximum of the interest rate cap in effect for that year. When index performance is flat or negative, no interest is credited for that year.

<sup>3</sup> This strategy credits a predetermined trigger interest rate when index performance is flat or positive. When index performance is negative, no interest is credited for that year.

<sup>4</sup> Amounts allocated to this strategy earn interest in arrears, based in part on the performance of the Citi Flexible Allocation 6 Excess Return Index. The index term is two years. This strategy credits interest by multiplying the index performance by the participation rate and then subtracting the spread. A positive result is the interest rate for that term. If the result of that calculation is 0% or negative, no indexed interest will be credited for that term. This strategy has a participation rate declared in advance, subject to the minimum participation rate, and is guaranteed for each two-year index term with a spread that is guaranteed to remain 0% for the life of the contract. The crediting strategy will not reduce the contract value, even if the index performance is flat or negative.
