## Mapping the World's Prices 2019

This is the 8th DB annual survey of global prices and living standards from various countries and cities around the world. We've added some new cities this year whilst still trying to keep the analysis to cities and countries relevant to global financial markets. We continue to refine our methodology and while it's impossible to exactly match products and services around the world, we try to ensure as much uniformity as possible and then convert prices back to USD. We mostly use crowd sourcing as our input data.

Over the last 12 months, the dollar has strengthened against all but the Egyptian Pound of the 42 currency pairs used to calculate this report with the biggest losers the Turkish Lira ( $-31 \%$ ) and the Argentine Peso (-55\%). Indeed this is the overall story since we started this report in 2012. Over this full period and also over the last 5 years the dollar has out-performed all these currencies covering both the EM and DM universe. Of the 42 countries, 27 have seen their currency fall by $20 \%$ or more versus the USD over the last 5 years with the Norwegian Krone (-31\%), Swedish Krona (-31\%), Mexican Peso (-31\%), Brazilian Real (-43\%), Russian Rouble (-44\%), Nigerian Naira (-55\%), Egyptian Pound (-59\%), Turkish Lira (-64\%) and the Argentine Peso $(-82 \%)$ at the bottom of the pack. Sterling ( $-23 \%$ ), the Euro ( $-20 \%$ ) and the Swiss Franc (-14\%) have also seen significant drops.

In this year's report we highlight which cities - across products, services and income - have seen the biggest change over the last year and also over the last 5 years.

Indeed, in 2019 the long standing dominance of Zurich as the city with the highest salaries and disposable incomes (after rent) is over. We have a new city to send our CVs to and that's San Francisco. Zurich drops to number 2. San Fran has climbed a stunning 7 and 21 places on these two measures over the last 5 years. It's also climbed 7 places to number 9 over both the last 1 and 5 years in our quality of life index (more later).

Overall, this shows that the rapid growth of the US tech sector is helping San Fran beat traditional capital cities for incomes. Whilst its cost of living is increasing each year and rising up the cost rankings on most measures we cover, it still lags major global capitals. In terms of 2-bed rents however, it is only behind Hong Kong.

Part of the 5-year climb of San Fran is also a US and USD story as New York, Boston and Chicago fill out the rest of the top 5 in terms of salaries and disposable incomes. They have all entered the top 5 recently as the US economy/USD powers ahead

Jim Reid<br>Strategist<br>+44-20-754-72943<br>Craig Nicol<br>Strategist<br>+44-20-754-57601<br>Henry Allen<br>Research Analyst<br>+44-20-754-11149

helping edge out Australian and major European cities. When we started this report back in 2012 the US was a very cheap place internationally and salaries were generally competing to be in the top 10 , not dominating the top 5 as they do today.

If Zurich has lost its top spot on incomes/salaries, it still tops the charts or gets close in many of the most expensive goods and services. It is generally followed by Nordic/Scandinavian countries with other European cities not far behind.

Zurich though has climbed one place to top of our quality of life series edging Wellington back to second place. Copenhagen, Edinburgh, Vienna, Helsinki, Melbourne, Boston, San Fran and Sydney fill out the top ten. Major European cities seem to be falling down this list. Frankfurt has fallen 4 places to 13th this year, having been no. 1 five years ago, as its property price to income ratio has risen compared to other cities while their purchasing power index has fallen. Paris is down 2 and 8 places over one and five years respectively to a lowly 36th with London down 6 and 15 places at 41 st over the same period. Do these cities compensate with higher disposable incomes? Well the jury is still out as Frankfurt has fallen to 12th this year (6 places lower over five years), Paris unchanged at 28th, with London in 25 th place.

In fact seven cities make the top 10 in both after rent disposable income and quality of life. They are Zurich (2nd and 1st), San Fran (1st and 9th), Boston (4th and 8th), Wellington (10th and 2nd), Sydney (6th and 10th), Melbourne (both 7th) and Copenhagen (9th and 3rd).

If we further examine this balance between disposable income and quality of life, mega cities actually come out pretty poorly with New York (5th and 31st) perhaps edging out Tokyo (16th and 14th) depending on which way round you'd prefer the balance to be. Seoul is a respectable 21st and 29th with Paris (28th and 36th) and London (25th and 41st).

There are 21 megacities out of 56 in our quality-of-life sample and all bar Tokyo are in the bottom half on a quality of life basis with the bottom 12 all being developing country megacities which are also generally near the bottom in salaries.

Obviously this exercise looks at average salaries so megacities will have more people on much higher salaries (in EM but particularly DM ones), but the average worker struggles for income after rent and quality of life relative to smaller global cities. Aspiration must keep them going.

This quality of life measure is always the most subjective part of this study as different people have vastly different criteria for this. Our study is not the definitive guide on the matter but a good starting point for debate. Over the last couple of years readers have suggested that mega cities should rank much higher due to their huge cultural, entertainment and social opportunities. We don't score on that basis here.

For those looking for a weekend getaway Milan has replaced Copenhagen as the most expensive city in the world followed by Zurich, Madrid, Vienna and London. Istanbul continues to be the cheapest on the list helped by the large FX fall of late.

Zurich is again the place to find a long-term partner early in life and persuade them to stay at home at night, eat in, watch the telly and save your high disposable income or risk seeing it erode away on your partner. This is because it's by far the costliest place to go out on a date. This is followed by Oslo, Copenhagen, Helsinki and Tokyo. At the other end of the scale, five dates in Cairo cost the same as one in Zurich (and
you get to see the Pyramids and the Nile for free!). There is a similar ratio for the next cheapest namely Bangalore, Buenos Aires, Istanbul and Mumbai.

Our 'bad habits' index of cigarettes and beers is most expensive in Melbourne, swapping places with Oslo this year. Sydney, Auckland and Dubai make up the top 5. EM countries are generally very cheap places to over indulge on this basis. Interestingly this is a rare area where Zurich is 'relatively' cheap ranking 19th out of 54 cities in expensiveness.

Don't lose or damage your iPhone on holiday in Brazil, Turkey, Argentina, India or Greece as iPhones are $25-65 \%$ more expensive than in the US - still the cheapest place to buy outside of Nigeria which we can't quite explain. Japan, Hong Kong, and Australia see similar prices to the US Apple store for phones.

For those living in Singapore, Copenhagen or Oslo you are actively discouraged from buying a new car as policy makes it extraordinarily expensive. So maybe walk or ride a bike more there. However you may want to take a cold drink with you in Singapore and a warm one in the other two cities. Be careful though as sport shoes in Copenhagen and Oslo are only behind Zurich in costs. The good news is that public transport is mid-ranking in terms of expensiveness in these three cities suggesting deliberate policy moves. London has the most expensive public transport in the world and is also the most costly place to hire a car. Petrol is around 5 times as expensive in Hong Kong (no.1) as in Cairo and Riyadh (cheapest).

Moscow and Istanbul have the cheapest internet in the world and if you're Face Timing from these two cities to Dubai it will be 9-12 times cheaper on one end of the call to the other.

If you are a connoisseur of the best coffee (a cappuccino in this case) then no need to stray from the home of coffee in Milan. It costs three times as much in Copenhagen, Dubai, HK and Oslo.

Stockholm has replaced Helsinki in terms of most expensive hourly rate for a cleaner with Oslo third. There must be a snow tax! Even the 4th most costly - namely Boston- has severe snow at times. The sunnier/hotter climes of Cape Town, Buenos Aires, Lagos and Istanbul have the cheapest cleaners.

Grow your hair as long as you like in Copenhagen, Oslo and Zurich as haircuts are 10-15 times as expensive as in Dhaka, Bangalore, Manila and Cairo.

In this year's study the new cities are Buenos Aires, Dhaka, Cairo, Rome, Lagos, Riyadh and Seoul and the new countries are Argentina, Bangladesh, Egypt, Nigeria, Saudi Arabia and South Korea. The new additions in Argentina, Saudi Arabia and South Korea mean that this year we now have all the countries that make up the G20 covered. We also felt that we needed more representation from emerging markets. For instance, the only two African cities we previously had were both from South Africa, but now we have added Cairo and Lagos, the two most populous African cities. The addition of Dhaka, Bangladesh also adds to the emerging market cities, but is an interesting one as it is one of the densest cities on the planet as well. We added Rome in addition to Milan, as Rome's population is twice the size of Milan's.

Acknowledgement: Most of our price data is collected from Expatistan. We would like to give special thanks to the founder Gerardo Robledillo for permitting us to use this data. Our Quality-of-Life indices and salary datasets use data collected from

Numbeo. We would like to thank the founder Mladen Adamovic for permitting us to use the data from his website.

We would also like to acknowledge the work of Apurv Chaudhari in this report.

Notes on data and methodology: Like our 2018 study, we have collected the data by surveying prices posted on the internet as well as from secondary sources. In order to ensure prices are comparable across countries, we have tried our best to use goods and services that are standard across countries or are close substitutes. As a result we have tried to ensure that all price distortions such as taxes, surcharges and discounts are included.

Much of our data is from sources that utilise crowdsourcing techniques to collect and aggregate price data. While this methodology provides them with regular data updates from a large sample, there may be issues with data quality and consistency over time. As a result some data points in our report may also be somewhat inconsistent over time although we tried to adjust for outliers where possible. Do note thus that prices, changes and ranks should be considered representative with considerable room for measurement and sampling error.

In order to further control for the quality and consistency of our data, we have kept previous years' data points referring to the same point in time year to year (i.e. the month of April in every year) to control from potential seasonality within and across regions and thus improve both intra- and inter- period comparability. We have also updated our 2018 data to take into account revisions for that year since last year's report was published. This provides for a more fair comparison. Changes from 2018 ranks are also noted, along with the change vs 2014 as a 5-year comparison

## Quality-of-Life Indices (ranks)

Note on methodology: The Numbeo Quality-of-Life index is an empirical measure of the living standards across various cities. The index is calculated by aggregating various sub-indices that measure certain broad factors that affect overall quality of life in a given location. These underlying sub-indices measure (1) consumer purchasing power (purchasing power index); (2) regional crime and safety (safety index); (3) overall quality of health care availability (healthcare index); (4) general cost of consumer goods (cost of living index); (5) housing affordability (property price to income ratio); (6) traffic congestion and commute times (traffic commute time index); (7) overall pollution (pollution index); (8) regional climate likeability (climate index). Further details on methodology around data collection and aggregation can be found at the source website here.

Note: Inflation is year on year change of CPI levels for every calendar year. For Argentina, comparable data only covers 2017 and 2018.

## Appendix 1

## Important Disclosures

## *Other information available upon request

*Prices are current as of the end of the previous trading session unless otherwise indicated and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Other information is sourced from Deutsche Bank, subject companies, and other sources. For disclosures pertaining to recommendations or estimates made on securities other than the primary subject of this research, please see the most recently published company report or visit our global disclosure look-up page on our website at https://research.db.com/Research/Disclosures/CompanySearch. Aside from within this report, important risk and conflict disclosures can also be found at https://research.db.com/Research/Topics/Equities?topicld=RB0002. Investors are strongly encouraged to review this information before investing.

## Analyst Certification

The views expressed in this report accurately reflect the personal views of the undersigned lead analyst(s). In addition, the undersigned lead analyst(s) has not and will not receive any compensation for providing a specific recommendation or view in this report. Jim Reid, Craig Nicol, Henry Allen.

## Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively 'Deutsche Bank'). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (https://research.db.com/Research/), and can be found on the general coverage list and also on the covered company's page. ACatalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a nearterm or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (https://research.db.com/Research/) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates - these are common in emerging markets. The index fixings may - by construction - lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness
of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited - up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the 'Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/ about/publications/character-risks.jsp. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https:// research.db.com/Research/ on each company's research page. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, "You" or "Your") with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls ("CC") from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been made consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA, NFA and SIPC. Analysts located outside of the United States are employed by non-US affiliates that are not subject to FINRA regulations.

Germany: Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

United Kingdom: Approved and/or distributed by Deutsche Bank AG acting through its London Branch at Winchester House, 1 Great Winchester Street, London EC2N 2DB. Deutsche Bank AG in the United Kingdom is authorised by the Prudential Regulation Authority and is subject to limited regulation by the Prudential Regulation Authority and Financial Conduct Authority. Details about the extent of our authorisation and regulation are available on request.

Hong Kong: Distributed by Deutsche Bank AG, Hong Kong Branch or Deutsche Securities Asia Limited (save that any research relating to futures contracts within the meaning of the Hong Kong Securities and Futures Ordinance Cap. 571 shall be distributed solely by Deutsche Securities Asia Limited). The provisions set out above in the 'Additional Information' section shall apply to the fullest extent permissible by local laws and regulations, including without limitation the Code of Conduct for Persons Licensed or Registered with the Securities and Futures Commission.

India: Prepared by Deutsche Equities India Private Limited (DEIPL) having CIN: U65990MH2002PTC137431 and registered office at 14th Floor, The Capital, C-70, G Block, Bandra Kurla Complex Mumbai (India) 400051. Tel: + 91227180 4444. It is registered by the Securities and Exchange Board of India (SEBI) as a Stock broker bearing registration no.: INZ000252437; Merchant Banker bearing SEBI Registration no.: INM000010833 and Research Analyst bearing SEBI Registration no.: INH000001741. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations. Deutsche Bank and/or its affiliate(s) may have debt holdings or positions in the subject company. With regard to information on associates, please refer to the "Shareholdings" section in the Annual Report at: https://www.db.com/ir/en/annualreports.htm.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. 'Moody's', 'Standard Poor's', and 'Fitch' mentioned in this report are not registered credit rating agencies in Japan unless Japan or 'Nippon' is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period..

Korea: Distributed by Deutsche Securities Korea Co.
South Africa: Deutsche Bank AG Johannesburg is incorporated in the Federal Republic of Germany (Branch Register Number in South Africa: 1998/003298/10).

Singapore: This report is issued by Deutsche Bank AG, Singapore Branch or Deutsche Securities Asia Limited, Singapore Branch (One Raffles Quay \#18-00 South Tower Singapore 048583, +6564238001), which may be contacted in respect of any matters arising from, or in connection with, this report. Where this report is issued or promulgated by Deutsche Bank in Singapore to a person who is not an accredited investor, expert investor or institutional investor (as defined in the applicable Singapore laws and regulations), they accept legal responsibility to such person for its contents.

Taiwan: Information on securities/investments that trade in Taiwan is for your reference only. Readers should independently evaluate investment risks and are solely responsible for their investment decisions. Deutsche Bank research may not be distributed to the Taiwan public media or quoted or used by the Taiwan public media without written consent. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation to trade in such securities/instruments. Deutsche Securities Asia Limited, Taipei Branch may not execute transactions for clients in these securities/instruments.
