Tool Hawk™
Barcode Tool
Tracking Solution

Automate the tracking of tools and equipment with barcode technology using Tool Hawk. Save time and money on costly equipment replacements with this easy-to-use system. With a few simple barcode scans, tools and equipment are quickly checked out to users and jobs. Eliminate the need for paper based tracking systems that are both time consuming and often inaccurate. Every check in/check out transaction is automatically date and time stamped giving management an accurate audit trail as to the usage of each tool.

Why Tool Hawk?

◊ **Reduce the Cost of Replacing Equipment**
Tool Hawk provides the ability to track down the movement of tools and equipment, eliminating the question of whether it is lost or stolen. The simple check in/check out system allows for immediate audits of inventory.

◊ **Make Workers Responsible for Equipment**
Checking out equipment is performed by scanning the barcode on each asset and scanning the barcode ID for the worker. This allows the system to know who has equipment, at any time. Workers now know that this is being tracked and tend to be diligent in returning the equipment that is issued to them.

◊ **Know the Location of Equipment at all Times**
As equipment moves from one location to another in Tool Hawk, the equipment and location barcodes are scanned, allowing management to have a clear picture of the equipment inventory and location. This is critical in productivity, allowing management to decide where best to deploy equipment.

◊ **Keep Accurate Maintenance Records on Equipment**
Tool Hawk includes the ability to record any maintenance on equipment and plan for the next scheduled service. Repair personnel is able to record the cost and write any associated notes.

◊ **Accurate Insurance Records**
No one wants to think about an insurance loss, but unfortunately, it does happen. Tool Hawk provides the business owner an accurate list of equipment assets that can be presented to an insurance company at the time of a loss, allowing for much quicker claim settlement.

Tracking System Specifications

Installation Options
Internal Windows Server
Single PC Workstation
Web Hosting Server

Reports
Tool Hawk includes 15 standard reports that can be sorted in unlimited ways. Reports are available as either a PDF or Excel spreadsheet. Reports include:
- Inventory Report by Item or Location
- Inventory Report by User
- Equipment Quantity on Hand
- Equipment Transaction History
- And Many More...

Web Hosting Option
Host the Tool Hawk barcode tracking system on General Data's web server. Make the system available over the internet to any user whom you give rights.
