OVERVIEW OF PHOTOSYNTHESIS

4.2 Study Guide

KEY CONCEPT

The overall process of photosynthesis produces sugars that store chemical energy.

VOCABULARY	
photosynthesis	light-dependent reactions
chlorophyll	light-independent reactions
thylakoid	

MAIN IDEA: Photosynthetic organisms are producers.

- **1.** Why are some organisms called producers?
- **2.** What is the function of photosynthesis?
- **3.** What is chlorophyll?

MAIN IDEA: Photosynthesis in plants occurs in chloroplasts.

- **4.** What are chloroplasts?
- **5.** In which two parts of a chloroplast does photosynthesis take place?
- **6.** What are thylakoids?
- **7.** Write the chemical equation for the overall process of photosynthesis. Then explain what the equation means and identify the reactants, products, and the meaning of the several arrows.
- **8.** What are the differences between the light-dependent reactions and the light-independent reactions?

STUDY GUIDE, CONTINUED

Use the space below to sketch and label a chloroplast. On the sketch, write the four steps of the photosynthesis process.

Photosynthesis

Vocabulary Check

- **9.** The prefix *photo-* means "light," and *synthesis* means "to put together." How do those meanings tell you what happens during photosynthesis?
- **10.** The prefix *chloro* means "green," and the suffix *-phyll* means "leaf." How are these meanings related to chlorophyll?
- **11.** The prefix *in-* means "not." How does this meaning tell you which reactions in photosynthesis require light, and which reactions do not?
