Vending machines are not just for snacks and sodas anymore. Sure, when we think of a vending machine, we may picture hungry people feeding a dollar or quarters into a machine in order to grab some quick satisfaction from a candy bar or bag of chips, but the self-service market has grown into a widely varied industry. Now, consumers can find everything from high-end electronics to fashion accessories in vending machines.

And it isn't just us saying that. According to research on future trends in the unattended retail market from [Forbes](#), vending machines are moving away from unhealthy snack foods and toward new types of offerings. Vending machines that provide alternatives to snack foods, such as healthy items or non-food items altogether, are emerging as a popular new fixture in the market.

Evidence of that trend can be seen in the major news from the unattended retail space in recent months. Several companies rolled out new types of vending machines, designed to bring a wide array of products to the hands of consumers.

Here's a quick snapshot of some notable news items from the last two months:

BooksActually, an independent bookstore located in Singapore, is [bringing literature to vending machines](#). Two new machines placed at the National Museum of Singapore allow visitors to pick up a new book. Each of the machines offers stock of 20 to 22 new books, for a total of 120 to 150 copies. The machines were inspired in part by an early incarnation from Penguin Books, known as the "Peguincubator."

Meanwhile, for those who are looking for a snack, HealthyYOU, a provider of vending machines stocked with healthful food, [is growing](#). The company, which was founded over a decade ago and does away with the typical franchisee model of vending machines, announced it would expand to 800 vending machine operators and thousands of vending machines.

Those looking for a totally redesigned vending machine experience need look no further than U-Select-It's new line of vending machines, known as the [Evoke series](#). The company announced the launch of the "next-generation vending machine," and showed off the new tech at the National Automatic Merchandising Association OneShow 2016 in Illinois in April. The new machines sport a redesigned look, and include a touchscreen, larger product showcasing and merchandising flexibility.

This month, PYMNTS talked to online auto retailer [Carvana](#) to discuss how their recently released Car Vending Machine is helping to fuel their efforts to revolutionize the car buying experience as we know it.

Unattended Retail June Tracker Updates

This month's Unattended Retail Tracker includes a player directory with 10 new entries: 365 Retail Markets, Hemisphere West Europe Ltd., Klever Logic, MSC Payment Solutions, Parlevel Systems, PayTec AG, Payter, SIX Payment Services Ltd., Terminal Technologies Ltd. and UNICUM.

The Unattended Retail Tracker will serve as a bimonthly framework for the space, providing coverage of the most recent news and trends, as well as a provider directory to highlight the players contributing to the activities and movements taking place across the segments that comprise the now expansive unattended retail ecosystem.

The included companies will also be thoroughly evaluated and assigned scores based on the following characteristics: *markets served, technology solutions offered, acceptance of various payment methods and the security standards achieved.*

We hope you enjoy this tracker and we welcome your feedback. Please keep us informed on what you liked, who we may be missing and how we can make this bimonthly report better by emailing us at unattendedretail@pymnts.com.

Happy reading!

The (Unattended) Car Buying Alternative

Today's tech-savvy consumers are looking for convenience wherever their shopping journeys may take them.

Meaning the traditional buying models for many industries just aren't cutting it anymore – and now you can add the long-standing car dealership model to the list.

Ernie Garcia, founder and CEO of [Carvana](#), put it simply: Consumers today are looking for a better way to buy a car. Unfortunately, the traditional process of dealing with a car dealership can come with inefficiencies and lack of transparency that Garcia said shoppers are ready to trade in for something new.

“When you look back at how consumer buying has changed to favor online, on-demand purchases, while still mandating quality and good customer service, we feel confident that now is the time for car buying to undergo a similar revolution,” Garcia explained.

Carvana, an online car-selling startup focused on bringing digital disruption to the auto retailer market, recently opened up a fully automated, coin-operated car [Vending Machine](#) in Nashville, Tennessee.

It's one thing to take car buying online, but to integrate the vending machine concept into the pickup process is something Garcia said is sure to be a “one-of-a-kind experience that mirrors just how simple and easy we've made it to buy a car online.”

Purchasing a vehicle via Carvana typically takes just 30 minutes.

After submitting the necessary paperwork and down payment information, reviewing the contracts and then electronically signing everything online, a consumer is done with the process.

For those who opt to retrieve their newly purchased vehicle via the Vending Machine, they simply go to the multi-story structure, which is a glass tower storing up to 20 cars, and select their name from a kiosk inside the machine.

From there they insert a Carvana-branded 3-inch coin into the custom coin slot to kickstart the vending process. Then, their car is automatically retrieved using robotic platforms and moved through the machine using automated parking technology until it reaches a delivery bay where it can be picked up.

“We are delighted to launch the world’s first, fully automated, coin-operated car Vending Machine,” Garcia said in a [press release](#) announcing the Vending Machine launch.

“Carvana created the original car Vending Machine concept in Atlanta in 2013, and we’ve spent the last two years taking this experience to a whole new level,” he added.

By positioning itself as a true alternative to the traditional dealerships consumers have come to expect dealing with during the car buying experience, Garcia said Carvana is looking to give consumers everything needed to purchase a vehicle on their own terms and at their convenience.

Though Carvana has confirmed plans to bring its Car Vending Machines to as many markets as possible in the coming years, it’s still unable to say exactly where the next tower may pop up.

“People are already looking for alternatives to dealerships and will continue to do so, and that’s what Carvana is,” Garcia added.

Methodology

Unattended Retail Tracker™

The PYMNTS.com Unattended Retail Tracker™ is a bimonthly report designed to give an overview of the trends and activities across the unattended retail/vending market and the players who are delivering on those services.

The tracker will also include the latest news and highlights and will be organized into a framework that showcases a directory of the key players and information about their capabilities and unattended retail solution offerings.

Scoring

We evaluate companies based on the markets they serve, the technologies they offer, the type of payments accepted and the security standards they have accomplished.

The companies included in the scoring support unattended retail and payments for the following segments within the self-service industries:

Food
& Beverage

Service Vending

Remote Retail

Parking

Restaurant
& Hospitality

Regarding the technologies evaluated, we assess the depth of solutions supported. For example:

- NFC (Near Field Communication)
- EMV
- Magnetic Stripe
- QR Code
- BLE (Bluetooth Low Energy)
- Smart Cards

Payments accepted include a depth and breadth of payment types. For example:

- Credit/Debit Cards
- Private Label or Closed Loop Solutions
- Digital Wallets (Apple Pay, Android Pay, Samsung Pay, PayPal, and more)

We also give credit to solutions for security compliance such as PCI.

Vending

Parlevel announces a trio of launches

Parlevel had a busy month, as it rolled out three new solutions, including a [micro market solution](#) that will provide operators with tools to help implement a micro market business. The company also announced the launch of a [cashless payment platform](#), which will allow merchants to accept credit and debit cards, campus and loyalty cards and mobile wallets like Apple Pay and Android Pay, as well as a new [flexible financing solution](#) that will allow businesses to invest in equipment and technology without large upfront costs, known as Parlevel Capital.

Payment Technologies unveils new contactless communication method

Italian payment system provider [Payment Technologies unveiled OPTO](#), its newest contactless communication technology, at VendItalia, a Milan vending sector trade fair. The tech allows merchants to accept contactless payments from a customer's smartphone without NFC. Instead, OPTO utilizes a contactless technology that transmits protected data by projecting a color-encoded light to an optical reader.

OTI, Microtronic, partner for e-vending, closed-loop payment solution

NFC and cashless system provider On Track Innovations and Microtronic, a Swiss closed-loop payment system provider, announced they had [partnered for a new solution](#). The solution will integrate Microtronic's closed-loop e-vending solution into the connect 3000, manufactured by OTI. The solution will allow merchants to accept both open loop payments such as credit and debit cards, and closed loop payments like those from NFC payment cards and wearables.

Crane Merchandising Systems launches dual mobile apps

[Crane Merchandising Systems](#) launched two different mobile apps designed to support vending operators, known as Crane Cashless and VendMAX. The Crane Cashless app provides tools such as real-time access to device status, alerts, configuration data, troubleshooting tools and training materials to Crane Cashless and telemetry customers. Meanwhile, the VendMAX app can help operators reduce costs by synchronizing data in real-time via a cellular or Wi-Fi connection. Both apps are available for smartphones and tablets running either iOS or Android.

Looking for a good book? Find a vending machine

[BooksActually rolled out](#) a new type of bookstore at the National Museum of Singapore, one that allows customers to purchase a new book instead of a soda or a snack. Each of the vending machines carry a total of 120 to 150 books, including 20 to 22 different titles. The machines were inspired by Penguin Book's "PenguinCubator," which was unveiled in the 1930s in London, England.

NAMA VDI Task Force publishes new standards

The NAMA Vending Data Interchange Task Force [recently published a new standard](#) that would allow vending management and micromarket systems to work side by side. The standard promotes compatibility between the two systems, streamlining and reporting for operators of both channels. 365 Retail Markets, Cantaloupe Systems, Canteen and Cane/Streamware were announced as early adopters and users of the new standard.

HealthyYOU to expand

HealthyYOU vending, which offers healthful snack and beverage options at vending machines around the country [announced it would expand](#). The company, founded 16 years ago, manufactures their machines in Freeport, Illinois, and offers them without a franchising, royalty or training fee.

U-Select-It announces new line of vending machines

Vending machine equipment manufacturer U-Select-It [announced the launch](#) of the Evoke series, a “next-generation vending machine.” The new machines were unveiled at the National Automatic Merchandising Association OneShow 2016 in Illinois in April. The Evoke series includes retail tools such a new touchscreen to drive sales for new operators, along with larger product showcasing and merchandising flexibility, and a new look.

Restaurants and Hospitality

McDonald’s tests self-serve coffee service

According to reports, a McDonald’s location in Chicago has been testing a [self-serve McCafe coffee station](#). The station is separate from the ordering counter, includes a touchpad that customers can use to order and pay, and a system to dispense coffee and cups. Customers can choose between several coffee options, including lattes, mochas and cappuccinos.

Jack Astor’s debuts coin-operated beer taps

Jack Astor’s rolled out a new way to get customers beer more quickly. The Canadian pub chain debuted a [coin-operated beer tap](#) that accepts coins of any denomination (Canadian coins range in value from 5 cents to \$2). According to executives, the taps will meet customers’ desires for on-demand service, and will come loaded with ale from local craft brewers.

Wendy’s tries out self-service kiosks

According to a report from The Columbus Dispatch, Wendy’s is testing out [self-serve kiosks](#) in several locations throughout central Ohio. The kiosks allow diners to order and pay for their meals without ever interacting with a cashier. The company has plans to roll out the self-ordering installations to 6,000 locations by the end of the year. The kiosks also fit into a larger push Wendy’s and other fast food chains have made recently toward mobile order and checkout.

Pizza Hut Asia meets “Pepper”

SoftBank Robotics Holdings Corp. is partnering with MasterCard and Pizza Huts in the Asia-Pacific region to bring a new kind of QSR experience to consumers. SoftBank’s robot, known as Pepper, [will take orders and payments](#) from customers at select Pizza Hut restaurants via MasterCard’s service MasterPass service as part of a pilot program. Pepper will also help guide customers through the payment process and provide special recommendations, offers and rewards to customers.

Parking

Apriva widens unattended retail EMV certification

Apriva recently said [it would widen EMV](#) certification to include unattended retail offerings at businesses such as parking garages and car washes. The certification allows merchants to accept EMV payments from major credit card brands such as Visa, MasterCard, American Express and Discover.

CPI, Klever Logic team up for cash payment option

[Klever Logic and Crane Payment Innovations](#) announced a partnership to implement a cash payment option for Klever's PARCS solution, known as FlashPARCS. Under the terms of the partnership, CPI will add its BNR bank note recycler to FlashPARCS mobile kiosks, which will allow the kiosks to accept cash. Cash payments have experienced a revival at parking lots in recent years, executives said, as many parkers would rather pay with cash than their credit or debit cards.

Service Vending

OTI PetroSmart and FTS partner for mobile fleet payments tool

So far, mobile payments for fleet drivers are sparse- compared to the consumer payments space, but a new collaboration aims to change that. On Track Innovations subsidiary OTI PetroSmart, which provides fuel payment solutions, and Fuel Telematics Solutions are teaming up to develop [a mobile payments solution](#) for the fleet sector. According to reports, the pair will use Bluetooth Low Energy beacons and NFC technology to authenticate vehicles and identify fuel stations and pumps. Specifically, OTI PetroSmart will provide its EasyFuelPlus tool, which automates vehicle identification at the pump and uses OTI's existing contactless card technology, while FTS will develop a cloud-based mobile payment platform for the solution.

Samsung unveils the "reinvented refrigerator"

Samsung is hoping to change the way you think about your refrigerator. The company unveiled the [newest incarnation](#) of the essential home appliance, complete with new features, including a 21.5-inch touchscreen that serves as refrigerator's "command center." From the screen, users can share family calendar events and notes, view the inside of the fridge while grocery shopping or enjoy music or television content while they unpack their dishes or cook a meal.

General Unattended

Unattended retail payments reach a turning point

Cashless and mobile transactions provider USA Technologies CEO Stephen P. Herbert, [said recently](#) that the company is experiencing "an inflection point in the unattended retail payments market," thanks in part to cashless payment solutions, record revenue and a new integration. The company also announced its third-quarter earnings, showing another strong quarter revenue wise, but with an overall loss. The company reported a revenue increase of 33 percent YOY, to a total Q3 revenue of \$20.4 million. Overall, the company saw a quarterly loss of \$5.4 million.

IKEA tests QR code-based mobile checkout

Furniture retailer IKEA is working on a way to use mobile technology to improve the buying process. The company is [currently running a pilot program](#) in France that will allow shoppers to scan their items via their phone camera as they shop and load items into their cart. At checkout, the app combines the total purchase and creates a QR code that is scanned at checkout instead of the individual items.

Avanti announces Cantaloupe System integration

Micromarket provider Avanti Markets Inc. [unveiled a new integration](#) with Seed Markets, a cloud and mobile solutions company for vending and OCS from Cantaloupe Systems. The integration will combine reporting and logistics from both systems to allow for faster training and easier servicing, better market scheduling, and more. The pair will also partner on an onboarding process.

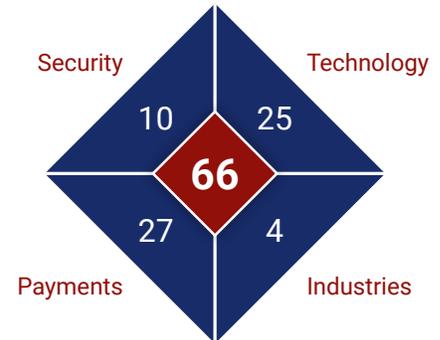

Parlevel infographic sheds light on VMS benefits

Vending management system (VMS) provider [Parlevel published a new infographic](#) that helps shed light on some of the benefits of having a VMS. According to the graphic, a VMS can increase cash collected up to 100 percent, save time on deliveries and stocking, and help boost sales.

Scorecard

Company: 365 Retail Markets
Founded in: 2008
Headquarters: U.S.

365 Retail Markets is a global provider of unattended and highly automated MicroMarket self-checkout solutions. The company offers platforms for vending, food service and hospitality, and provides hardware and software. 365's kiosks offer capabilities such as a dual-sided credit card reader, NFC and mobile wallets acceptance, a newly recessed fingerprint scanner, and a barcode scanner with the ability to scan coupons from mobile phones.

Company: Advam
Founded in: 2014
Headquarters: Australia
