#### National Interagency Coordination Center Incident Management Situation Report Friday, December 10, 2021 – 0730 MDT National Preparedness Level 1

# National Fire Activity (December 3, 2021 – December 9, 2021): Initial attack activity: Light (543 fires)

initial attack activity:	Light (543 fire
New large incidents:	25
Large fires contained:	28
Uncontained large fires: ***	8
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

**Link** to Geographic Area daily reports.

**Link** to Understanding the IMSR.

This report will post every Friday at 0730 Mountain time unless significant activity occurs.

	Active Incident Resource Summary

<u>Predictive Services Discussion:</u> Elevated and critical fire weather conditions will develop today across portions of the southern and central Plains, with the strongest winds overlapping the lowest relative humidity across northeast New Mexico and the Texas Panhandle. Dry and breezy conditions are likely to continue across portions of the southern and central Plains, especially the southern High Plains, through early next week, with Sunday favored for strongest winds and lowest relative humidity. Critical fire weather conditions are likely to develop on portions of the central Plains mid-next week, but the timing and extent remain somewhat uncertain. Dry conditions, including potentially critically low relative humidity, are also possible across portions of the Southeast into the Mid-Atlantic early to mid-next week.

Showers and thunderstorms are expected along and ahead of a cold front, with mixed precipitation behind the cold front and severe weather ahead of it, especially from the Mississippi Valley through the Ohio and Tennessee Valleys, Appalachians, and to the Atlantic and Gulf Coasts today through Saturday. Widespread heavy precipitation is expected across much of the West Coast, especially over the higher terrain, with the highest amounts likely in the Coast Ranges, Cascades, and Sierra falling mostly as snow. Overall, cooler and wetter than normal conditions are expected across the West this weekend and next week, with warmer and drier than normal conditions in much of the central and eastern US into mid-next week.

## **Taking A Nap Near The Fireline**

Operational Engagement Category

Firefighting is often exhausting work and firefighters can find themselves needing to sleep while on the fireline. Before pausing to rest, firefighters must weigh the following:

- Are lookouts posted? Discuss who that lookout can be. Can the lookout on the knob across the draw watch over you, or does it need to be your partner on the fireline alternating rest times?
- Is the area free of hazards (falling snags or rolling materials, etc.)? Discuss what you need to do to create a safe resting area.
- Are you still within agency work and rest guidelines? Review these guidelines.
- Does your crew need a break? Have they been pushed too hard? Talk about situations where you need to simply take yourself and/or your crew off the fireline for uninterrupted rest.
- To reduce risks:
  - Keep lookouts posted and rotate them.
  - Communicate crew conditions and status to supervisor or chain-of-command contact.

Discuss ways t to rest on the fireline and suggestions for methods to alternate shifts for more effective firefighting.
