INNOVATION

MANUSPOT

Use the right tool for the right job

Using the GYS Manuspot the tool change is so quick and easy you will never need to struggle using an incorrect tool, providing ultimate efficiency at your fingertips.

Using the GYS easy tool connection system simply clamp on and off each tool offering to ensure you always have the correct option to hand – the only thing you need to do is choose the correct pre-set parameter on your GYS dent pulling machine which is provided in a picture format.

The Manuspot includes the following tool attachments: -

1. **Manuliner**
2. **Single key**
3. **Wavy wire**
4. **Mini slide hammer**
5. **Spot shrinking**

Using GYS Dent pulling machines along with innovative products like the Manuspot and crucially having the benefit of the effortless GYS easy tool connection system to change tools ensures the right tool is being used every time – this in turn will also show a considerable saving in consumable products such as body fillers and abrasives.

RINGMATIC

The Ringmatic is an incredibly efficient method of applying dent pulling keys, simply follow the 5 quick steps below and be shocked at how quickly 50 keys can be attached!

1. **Load up the Ringmatic with up to 50 dent pulling keys**
2. **Connect the Ringmatic to your GYS dent pulling machine using the GYS easy tool connection**
3. **Set your machine to pre-set parameter Number 2**
4. **With earth attached – weld your key**
5. **Using a slide and push technique amazingly your next Key is ready to go!!**

The Ringmatic also has the huge benefit of a contact plate which offers incredible accuracy of key placement and also allows for reduced key proximity for the toughest of outer panel damage. Using the Ringmatic hugely reduces operative's application time which in turn improves the repair quality and crucially introduces a speedier repair process.

GYS have continued with investment in the UK providing local pre sales and after sales support across the full carbody range

in DENT PULLING

At GYS we invest heavily in our **R&D department** to ensure our customers have access to highly innovative products to ultimately improve ease of use, quality of repair and crucially end user productivity.

COMMISSIONING & SUPPORT

Once you have purchased a major item of equipment a GYS Technical Sales Engineer will provide a full commissioning service.

- Set up equipment and test operation
- Show nominated technicians how to correctly use the equipment
- Explain maintenance requirements
- Issue formal commissioning certificate (suitable for BS10125)
- Issue calibration certificate (Spot Welder)

SPIRAL INDUCTOR KIT

ref: 054783

- 1.2 KW Spiral inductor
- 18/24/30mm Bolt coils
- 1 x 800mm Flexible wire
- 1 x 80mm Rigid wire
- Carry case

GYSDUCTION AUTO

A powerful instantaneous induction heater.

Designed specifically for car body repair.

Gysduction is supplied as a powerful generator and accessories of your choice (see table below)

Modular system

Body Inductor - removes adhesives, logos, side mouldings.

Glass Inductor - removes direct glazed windows

Bolt Inductor - releases mechanical part

Hail Dent Reduction Inductor - can remove

soft hail type dents

Power: 2400W

Instant heating, no flame.

Only heats metal parts with accuracy whilst protecting the adjacent parts (no need to remove engine parts).

Remove parts without using solvent.

**BUY ANY

BATTERY CHARGERS

THE 1-2-3 TEST

Whether it's for Charging or Starting- GYS believe that the ideal tools must meet 3 simple criteria, encompassed with the GYS 1-2-3 Test.

1. Safety - The product must be safe to use with the battery in situ, chargers must include protection to ensure that no damage can be done to the vehicle's electronic system. This can include overvoltage protection, polarity reversal and the prevention of sparks.

2. All Battery Types - Equipment must have the ability to charge or work with the latest battery types. We now see new battery materials - AGM, EFB, Stop Start, Silver/ Calcium - a traditional constant current charger cannot be recommended for the latest battery types.

3. Universal Mode - The ability to safely charge when the battery type is not known, this is a very important 'real world' problem. Technicians will have experienced the difficulty in locating and identifying the battery type in many vehicles. GYS products offer a solution simply to connect and go, giving the assurance that the charge will be conducted safely without requiring the technician to identify the battery type.

1 Safety
 ✓ Provides protection for the vehicles' electronics
 ✓ Safe to charge in situ - no need to disconnect from the battery
 ✓ Polarity reversal protection
 ✓ Incorrect voltage protection.

2 All Battery Types
 ✓ Smart: advanced charging curves to suit the battery type e.g AGM, EFB, Stop Start, Silver/Calcium.

3 Universal Mode
 ✓ A function allowing the user to charge the battery safely when the type is not known.
