NOTHING AS CHANGEABLE AS THE WEATHER

Preliminary round assignment for the 26th Mathematics Alympiad

November 14, 2014

Colophon

TEXAS INSTRUMENTS

The Mathematics Alympiad (Wiskunde Alympiade) is an initiative of the Freudenthal Institute, Utrecht University

The Alympiad committee is responsible for organising the Alympiad and producing the assignment.

The committee consists of:

Sarah Abdellahi House of Mathematics, Isfahan, Iran

Marcel Daems Montaigne Lyceum, Den Haag

Tom Goris Fontys Lerarenopleiding, Tilburg

Dédé de Haan Freudenthal Instituut, Utrecht & NHL Hogeschool, Leeuwarden

Kim Kaspers Murmellius Gymnasium, Alkmaar

Johan Klijs Instituut voor Lerarenopleidingen, Hogeschool Rotterdam

Johan van de Leur, Mathematisch Instituut, Universiteit Utrecht

Matthias Lippert Röntgen Gymnasium, Remscheid-Lennep, Duitsland

Ruud Stolwijk CITO, Arnhem & Vrijeschool Zutphen VO

Martin Traas Zernike College, Haren

Monica Wijers Freudenthal Instituut, Utrecht

Secretariaat:

Liesbeth Walther en Mariozee Wintermans Freudenthal Instituut, Utrecht

The Alympiade has been made possible partly by grants from

Ministry of Education, Culture and Science (OCW) CASIO, Amstelveen Texas Instruments, Utrecht

Guide for the preliminary round assignment for the 2014/2015 Mathematics Alympiad

This Mathematics Alympiad assignment consists of five assignments and the final assignments. The first five assignments are a run-up to the final assignment: all knowledge and insights gained in these assignments can be applied in the final assignment.

General advice for working on this assignment:

- First read the full text of the assignment so you will know what you have to do.
- Keep an eye on the time you spend on the first five assignments; take plenty of time for the final assignment, at least two hours.
 If you divide up tasks within your team, discuss the results with each other after every assignment.

- Research questions:

A number of questions say: 'Investigate how ...' or 'investigate aspects of ...' Always state precisely what you investigated, if necessary investigate simpler problems, go beyond just answering the question, look into alternatives. These are the criteria on which the quality of your result will be judged.

Handing in:

- Assignments 1 to 5
- The final assignment

The jury will receive a digital copy of your work. If you have any appendices with your work, hand in everything in a zipped folder. Include the name of your school *and* your own names in the file name(s).

Judging:

These are some of the points that will be considered:

- Legibility and clarity of the final assignment;
- How complete the work is;
- The use of maths;
- The argumentation used and justifying choices that have been made;
- The depth to which the various assignments have been answered;
- Presentation: shape, coherence, legibility, illustrations, etcetera;
- (Mathematical) creativity in your elaboration of the assignments.

Have fun and good luck!

Nothing is as changeable as the weather

Introduction

In the past the weather already was a much-used topic of conversation. Therefore there are many sayings that arose throughout history in which the weather plays a part. Now, too, the weather still plays an important part in our daily lives.

"Shall we go to the beach? First check on the rain radar." How often have you had or heard such conversations in the past few years? Where the weather forecast used to be mainly of great importance to farmers and market gardeners, now everybody's planning their activities with an eye on the weather forecast. How sensible is that actually? In this Alympiad assignment you will take a closer look at a number of weather forecasts.

The annual project week for fifth grade students in Amberhavn is about to start. An abundance of activities will take place during this project week; not all activities have been confirmed yet, but the program will be varied, that is certain: a badminton tournament, a useless knowledge quiz, a football match, a GPS walk, a barbeque and a final ball. Since some of the activities in the project week will take place outside, the organisation wants to know which forecasts are best to follow, and for what activities the weather will be right. Your task is to advice the organisation in choosing the best weather forecast.

Part 1 Weeronline

Of course the organisation wants to know as far in advance as possible what activities can be organised during the project week. However, long term (two weeks) forecasts differ rather a lot. Therefore the organisation kept track of the long term forecasts over two weeks. Below you see two examples of such a forecast, both from *Weeronline*¹.

(neersl.= rain/precipitation, weercijfer: weather number)

As you can see, there is quite a bit of difference in the forecasts for Tuesday October 7 ('di 07 okt' in the chart) ...

Assignment 1

Describe in no more than a 100 words the weather pattern for Tuesday October 7 that can be deduced from the two forecasts above.

Appendix 1 contains the long term forecasts that have been made by *Weeronline* over the period between September 26 and October 9 2014. For October 7 you can see that over the period various amounts of rain were forecast.

Assignment 2a

Investigate whether there's a large variation in the amount of rain forecast for October 7. Use a numerical basis.

Assignment 2b

Investigate whether the forecasts for the amount of rain that have been made in the period between September 26 and October 9 2014 have a large amount of variation. Do not limit yourselves to the forecast for October 7. Use a numerical basis for your conclusion.

Assignment 3

Weeronline does not just do forecasts for maximum temperature and rainfall, but also for example for wind. The forecasts for some of the aspects of the weather used by *Weeronline* vary more than other. Investigate for which aspects of the weather the forecasts made by *Weeronline* vary least and most.

Part 2 Multiple forecasters weersvoorspellers

Now that we have taken a closer look at the forecasts by Weeronline, we will widen our scope and look at three other forecasters: *Buienradar²*, *Zoover³* and *Weersvoorspelling⁴*. Below you can see for all for of them the long term forecast they showed on their website on September 28:

(Weerbeeld = weather, hitte index = heat index, zonnekans = chance of sun, neerslag = rain/precipitation) Weersvoorspelling

As we already saw in the first assignment on the *Weeronline* forecast for Tuesday October 7, the forecasts are not always uniform. By a **uniform** forecast we mean one that remained more or less the same over the whole period.

Appendices 2, 3 and 4 contain the long term forecasts by respectively *Buienradar*, *Zoover* and *Weersverwachting* over the period between September 26 and October 9 2014.

Assignment 4

Investigate which of the four forecasters made the most uniform forecast for October 7 2014. Give supporting arguments for your method of working and elaborate on your result; do not limit yourself to a single number and a conclusion.

Part 3 In search of a reliable weather forecaster

We will now look even deeper: how reliable are the forecasts really? Is a forecast 'good' if the maximum temperature is 28,3 degrees while 29 degrees was forecast? Or if the forecast rain deviates by 1 mm from the actual amount of rain? Which is the better forecast: one that is close to the actual temperature seven days in advance, while the actual temperature is one degree higher than forecast, or one that varies wildly over the week before, but does forecast the temperature correctly one day in advance? To be able to judge this, we do of course need the actual weather data. You can find them in appendix 5.

Assignment 5

Investigate, judge and compare the reliability of the four weather forecasters used, based on the actual data in appendix 5.

Make your own choices for the criteria and representations you use. For example, use the criteria mentioned above and supplement them with similar criteria. Support the choices you make and the way you apply the criteria to judge the reliability of the weather sites.

Final assignment

Based on your findings from the previous assignments, write an advice for the organisers of the project week. Your advice can be one A4-page long. Indicate which forecaster can be best used in which way in the future to forecast the weather, and so help make the project week a success. Include the results from the previous assignments as appendices you're your advice. Where necessary, support your advice with calculations, tables, etc.

Appendix 5: Weather data

Source:

KONINKLIJK NEDERLANDS METEOROLOGISCH INSTITUUT (KNMI) – Dutch Royal Meteorological Institute

YYYYMMDD = Date (YYYY=year MM=month DD=day)

DDVEC = Vector average wind direction in degrees (360=north, 90=east, 180=south, 270=west, 0= no wind/variable wind)

FHVEC = Vector average wind speed (in 0,1 m/s)

FG = 24-hour average wind speed (in 0,1 m/s). See appendix 6 for the Beaufort scale

TG = 24-hour average temperatuur (in 0,1 degrees Celsius)

TN = Minimum temperature (in 0,1 degrees Celsius)

TX = Maximum temperature (in 0,1 degrees Celsius)

SQ = Amount of sunshine (in 0,1 hr) calculated from global radiation (-1 for <0,05 hr)

SP = Percentage of the longest possible sunshine duration

DR = Duration of precipitation (in 0,1 uur)

RH = 24-hour total precipitation (in 0,1 mm) (-1 for <0,05 mm)

NG = 24-hour average cloud cover (amount of cover of the upper atmosphere in eights, 9= upper atmosphere invisible)

Appendix 6: 1	Beaufort s	cale									

Wind force (Beaufort)	KNMI terminology (based on English Wikipedia page for Beaufort)	Wind speed in m/s
0	Calm	0-0,2
1	Light air	0,3-1,5
2	Light breeze	1,6-3,3
3	Gentle breeze	3,4-5,4
4	Moderate breeze	5,5-7,9
5	Fresh breeze	8,0-10,7
6	Strong breeze	10,8-13,8
7	High wind, moderate gale	13,9-17,1
8	Gale	17,2-20,7
9	Strong gale	20,8-24,4
10	Storm	24,5-28,4
11	Violent storm	28,5-32,6
12	Hurricane	>32,7
