How to use starbucks verismo milk frother

This post does contain affiliate links, but I'm always honest in my opinions and recommendations! I got the Starbucks Verismo single-serve coffee/espresso machine & milk frother for Christmas (score!! Thanks mom!). I'm using the frother to make kids drinks as well as lattes and au laits. I have discovered a cool shortcut for the milk frother that I wanted to share, too. Down at the bottom I have a little video showing it in action. shown with the coil attachment for frothing remove coil to steam milk (will still produce a little foam) I've never used a similar appliance so I can't compare the Verismo frother to other brands, but to all the people out there thinking can't you just microwave the milk, or heat it on the stove? I must point out that you will not get the same coffee shop feel of frothy, slightly foamy steamed milk from the microwave or stovetop. For the honest part of my review (the cons), i wish it held a little more milk so I could do 2 drinks at a time, and it would be nice if the milk got just a tad hotter for espresso drinks (although its perfect temp, on the hotter side, for kids drinks). It does seem a little pricey at almost \$60 but I do believe you get what you pay for, and you can get the milk frother discounted or free with Verismo systems, like this one that comes with 24 pods too: Here is the shortcut I like to make my kids cocoa and vanilla steamers, or as my 3-year-old calls them, "manilla steefers". (I have been making cocoa from scratch for years -- you just dissolve the sugar and cocoa powder in a little hot water and then add some milk and warm. It's so much tastier than the mixes made with milk powder!) Anyway the shortcut is to put the sugar and cocoa powder directly in the frother with the milk. Or, if you're making a Vanilla Steamer, add the sugar and vanilla to the cold milk. The sugar dissolves beautifully and I haven't noticed any residue left behind in the container. It is a huge convenience to not constantly watch the stove to make sure you don't burn the sugar or scald the milk. I checked the packaging and couldn't find any warnings about putting anything other than milk in the frother, and I'm always careful to rinse it right away... but you should proceed at your own risk! If you want a "recipe" I usually use 1:1 or 2:1 tsp sugar-cocoa ratio per cup of cocoa. For a vanilla steamer I'll use 1-2 tsp sugar and maybe 1/4 tsp. of vanilla extract per cup. Add a shot of espresso if you want a mocha or vanilla latte! If you're an Amazon shopper, check out these links for the frother, or a deal on the Verismo system with a frother! Hope you have as much fun with it as I am. Verismo milk frother affiliate link: Starbucks Verismo Milk Frother. The Starbucks Verismo Milk Frother whisks drain into a velvety foam for more refreshment options Enables you to create your most loved mark Starbucks Cafe refreshments at home with the Verismo Home Coffee and Espresso Brewer Heats and froths your decision of drain or non-dairy elective in only two minutes to make bistro lattes and cappuccinos, in addition to chilly froths drain for frosted beverages Easy to utilize and simple to wipe with auto stop, non-stick covering and dishwasher-safe parts Description Additional information Reviews (0) Do you need to accomplish an ideal rich foam to make bistro style lattes and cappuccinos? Jenny McGrath / Digital Trends Jenny McGrath / Digital Trends Jenny McGrath / Digital Trends Jenny McGrath / Digital Trends In 2013, Starbucks came it out with its answer to Keurig coffee makers, the Verismo 580. Like other single-cup brewers, it uses disposable pods to make coffee, but it can also whip up an espresso. Starbucks is launching the latest version, the Verismo V, which is available for pre-order today and officially goes on sale October 21. Some of the improvements over the original version include an adjustable drip tray for larger mugs, the ability to make a 10-ounce cup of coffee, and a hot water button for Americanos. There's an optional, separate milk frother that can be used for making lattes and cappuccinos. In addition to the hot water button, there are five other buttons on the top of the Verismo: one for power, rinse, milk capsules, espresso, and coffee. There are preset amounts the coffee, espresso, hot water, and milk dispense, but you can change them by holding the button down for three seconds, then pressing it again when you want it to stop. The machine will remember this input until you reset it. To make a drink, you open the top, slide a capsule into the slot, push the top down, and hit your desired button. It's fairly easy, although we did have one misfire, where the pod didn't align correctly and the machine spit out hot water. Since the capsule wasn't damaged, we fished it out of the reservoir, which holds about 12 used pods. The preset for coffee for is 10 ounces, and when we tried it out, it took about two minutes to brew. The coffee came out at an average of 168 degrees Fahrenheit (75.55 degrees Celsius). Espresso was ready in about 21 seconds at an average of 175 degrees Fahrenheit (79.44 degrees Celsius). While the hot water for an Americano is preset to 5 ounces, you can hit the hot water (which averaged around 184 degrees Celsius, or 84.44 degrees Celsius) button to stop it whenever you want. The optional Verismo Milk Frother, \$59, quietly froths up milk in about a minute and a half. It's designed so that you can separate it from the base for easier pouring and cleaning. It works really well, and can either froth your milk cold or simultaneously heat it to around 138 degrees Fahrenheit (59 degrees Celsius). You could also use the milk pods instead, which transform powder into froth via the coffee maker. The Starbucks pods really do manage to deliver authentic Starbucks flavor at home, and the machine does a nice job with espresso. The shots end up with a nice little crema on top. It's a quick and easy coffee or espresso delivery system, but there's a pretty big catch: The \$149 Verismo only works with Starbucks pods. Unless you buy in bulk, the pods are about \$1 a piece. That's not that different from Starbucks K-Cups, but with a Keurig you're not locked in to all Starbucks, all the time. [amz_nsa_keyword keyword="Starbucks Verismo pods"] Updated 10/21/2016: Updated to clarify how the Verismo frother works, as it does have the option to heat up milk as it froths. how to use verismo milk frother
