Link to Understanding the IMSR.
Two MAFFS from the $302^{\text {nd }}$ Airlift Wing (Colorado Air Force Reserve), one MAFFS from the $153{ }^{\text {rd }}$ Airlift Wing (Wyoming Air National Guard) and one from the $146{ }^{\text {th }}$ Airlift Wing (California Air National Guard) have been deployed to McClellan, CA to support wildland fire operations nationally.

One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) has been deployed to Sacramento, CA in support of wildland fire operations. Also supporting this aircraft are four ground controllers from multiple U.S. Air National Guard squadrons.

***Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/

Predictive Services Discussion: An upper-level trough over the Intermountain West will weaken with a cut-off low beginning to form over the Southwest. Another upper trough is forecast to arrive in the Northwest in the afternoon and evening. Upper ridging will extend from the Southeast through the western Great Lakes with an upper low near New England and troughing into the Mid-Atlantic. A cold front will slowly move east across the Plains with the front stalling over the Southwest. A Pacific cold front will move into western Washington overnight. Brisk north to northwest winds are expected behind the cold front over the Front Range of the Rockies into eastern Montana, eastern Wyoming, and the adjacent High Plains. Locally gusty northeast winds are also likely in Santa Barbara County in southern California. Scattered to numerous showers and thunderstorms are likely across the Plains to the Mississippi River along and ahead of the cold front. Scattered thunderstorms are forecast over the Four Corners area, most numerous over the Colorado Rockies. Rain will move into western Washington overnight with heavy rain possible for the Olympics.

## ESCAPE ROUTES - Part 3

Operational Engagement Category

A primary objective of every operational fire plan is to keep firefighters out of entrapment situations. However, firefighters must always be prepared to escape quickly to a safety zone or deployment area. Consider the following while discussing escape from possible entrapment.

- Have a plan that includes trigger points.
- Trigger Point: An observable event that triggers a pre-determined action. Example: If the temperature reaches $98^{\circ} \mathrm{F}$ and relative humidity (RH) goes into single digits, the crew will follow the established escape route to the safety zone.
- Reassess escape routes throughout the operational period.
- Does access to escape routes become more difficult as the day progresses?
- Do you have more than one escape route?
- Are all escape routes clearly marked?
- Are all firefighters familiar with the escape routes?
- During an escape, time will be short. Describe considerations in this situation such as:
- Maintain all critical equipment such as personal protective equipment (PPE) and radio. Discard gear that will not aid in your escape.
- Maintain contact with all other crewmembers.

Describe a good safety zone. How is that different from a deployment area?

- You should always know the location of your escape routes leading to safety zones and deployment areas.

[^1]
[^0]:    * Placer, Beaverhead-Deerlodge NF, USFS. Eleven miles east of Butte, MT. Timber and brush. Minimal fire behavior with creeping, smoldering and isolated torching.

    Trail Creek, Beaverhead-Deerlodge NF, USFS. IMT 2 (NR Team 4). IMT is also managing the Alder Creek incident. Twenty miles west of Wisdom, MT. Timber and brush. Minimal fire behavior with creeping and smoldering. Structures threatened. Area, road and trail closures in effect. Precipitation occurred over the fire area yesterday.
