Most Interesting

I have a side by side GE refrigerator. The compressor doesn't always come on. This is noticeable as the ice cubes starts to melt in the freezer section. To get the compressor running, i tap on the temperature control located in the fresh food section and the compressor will come on. This happens repeatedly. Therefore, my guess is that i have an intermittent temperature control problem. However, given that the temperature control, part # WR9X599 is discontinued, is there something else that can be causing this problem ?

Sal for Model Number [GE Model TFX25PPBE WW](#)

ANSWER Sal, Unfortunately with the temp control [WR9X599](#) having been discontinued there would be no suitable replacement available.

The top shelf of my refrigerator freezes liquids. The rest of the refrigerator/freezer works fine. Since it's only the top shelf that freezes, is the problem the thermostat or possibly something else? If it's the thermostat only, the part is WR9X599, which I can't locate. If it is the thermostat, is there a generic part for my G.E. refrigerator? Someone said because its an isolated incident on the top shelf only, it may be the air flow fan or something else. Thank you

John for Model Number [TFX22PPBGAA](#)

ANSWER Hello John, This is going to be an air circulation issue, most likely caused by the way the refrigerator is loaded. I'm sorry about the way this sounds since I am not trying to blame you, but... [show more](#)

The cold temperature thermostat is not working. I can not measure power out of the thermostat. The part number say WR09X0599. That part number has been cancelled by the manufacturer. What part should I purchase to replace the bad thermostat part number WR09X0599? Thank you,

Koch for Model Number [TFX25PPBEWW](#)

ANSWER Hello Koch. The part you need [WR9X599](#) has been permanently discontinued by the manufacturer and we don't know of any source or replacement for the part.

Latest Questions

My freezer is very cold about 14 degrees. The fresh food section is very warm about 55 degrees. The evap fan is working. The adjustment wheel is stuck on D and wont turn. The fresh food adjustment knob is set to 9 the coldest setting. What should I check to lower the temperature in the fresh food section. This is a side by side refrigerator. Thank you.

Gino for Model Number [Tfx26ppdww](#)

ANSWER Hello Gino. It sounds like you may have a defrost problem with the unit. Check and see if there is any frost build up on the evaporator coils in the freezer. If so, you will need to test the defrost... [show more](#)

My freezer is very cold about 14degrees. My fresh food is about 55 on the coldest setting. The evap fan is always on and the control wheel for the freezer is stuck on d.

Gino for Model Number [Tfx26ppdww](#)

ANSWER Geno, With the freezer temp running 14 degrees and the fresh food section at 55 then both sections are too warm. The freezer should run at about 0 degrees. It sounds like you may have a defrost... [show more](#)
