ADVANCED FACIAL AESTHETIC MASTERCLASS

Even though facial aesthetics is a fast-paced changing field with cultural and ethnical specificities, in-depth knowledge of **clinical facial anatomy** combined with **advanced injection techniques** will always be the pillars to ensure **safe and optimal results** in aesthetic medicine all over the world.

The Monaco Advanced Facial Aesthetic Masterclass is aimed at high level discerning doctors in aesthetic medicine interested in deepening their knowledge and improving their technique, as well as getting acquainted with the latest in facial aesthetics. Each year, we focus on two modules of the **top ten clinically relevant anatomic zones**. This year, we will cover **nose & nasolabial fold** enhancing techniques in the morning program, and cheek and zygoma in the afternoon.

The world's most prominent Plastic Surgeons, who operate and see the **live anatomy** of facial tissues on a weekly basis, will lecture and demonstrate on clinically relevant anatomy. The talks will be followed by an equally eminent faculty of Specialists, selected to inject these focus zones and share the most relevant pearls and pitfalls aiming to grow and safeguard your aesthetic practice.

We will **carefully select models** with challenging features within the focus zones in order to perform the most demanding and sophisticated live treatments. We will also emphasize cultural, ethnic and gender variations so you have the adequate tools should such treatment be required from you.

The lecture topics will be put into practice in the live show where paired injectors will have ample time to discuss surface anatomy, choice of filler and toxin, mode of injection, precautions and after care.
