1. DEMOGRAPHIA WORLD URBAN AREAS

Demographia World Urban Areas (Built-up Urban Areas or Urban Agglomerations) is the only annually published inventory of population, corresponding land area and population density for urban areas with more than 500,000 population. Unlike some other regularly produced lists, *Demographia World Urban Areas* applies a generally consistent definition to built-up urban areas.[1] Urban footprint data is reported without regard to political boundaries that are generally associated with metropolitan areas or sub-national jurisdictions. A useful definition was supplied by Alex Blei, of the NYU (New York University) Stern Marron Institute Urban Expansion Project, who described urban areas as contiguous or mostly contiguous built-up areas that "function as an integrated economic unit, linked together by commuting flows, social and economic interactions."[2]

Demographia World Urban Areas contains population, land area and population density for the nearly 1,000 identified built-up urban areas in the world with 500,000 or more population. The total population of these urban areas is estimated at 2.27 billion, representing 51.4 percent of the world urban population in 2021.[3]

---

[1] Some other urban agglomeration lists mix metropolitan areas, municipalities (parts of metropolitan areas) and urban areas (built up urban areas or agglomerations). None of these lists include urban land area data. The United Nations list is unique in providing notes that clarify the nature of its each of its listings (core cities, metropolitan areas, urban areas and others).

2. BUILT-UP URBAN AREAS: DEFINITIONAL ISSUES

There is considerable confusion about urban definitions, as is discussed below

2.1. What is a Built-Up Urban Area?

Built-up urban areas *are not* metropolitan areas.

An urban area ("built-up urban area,"[4] urbanized area or urban agglomeration)[5] is a continuously built up land mass of urban development that is *within* a labor market (metropolitan area or metropolitan region). An urban area contains *no* rural land (all land in the world is either urban or rural). In some nations, the term "urban area" is used, but does not denote a built-up urban area.[6]

An urban area is best thought of as the "urban footprint" --- the lighted area ("city lights") that can be observed from an airplane (or satellite) on a clear night.

By necessity, average population density data masks significant variations within urban areas. Within urban areas, urban population densities can range from below 400 per square kilometer (1,000 per square mile), particularly in North American urban areas, to over 1,000,000 per square kilometer (2,500,000 per square mile) in informal neighborhoods[7] of some Asian urban areas, such as Dhaka (See: *The Evolving Urban Form: Dhaka*).[8]

Varying densities within urban areas are illustrated by comparing by the Phoenix urban area which is at least 60 percent denser than the Boston-Providence urban area. Yet, the highest small area population densities within Boston-Providence are at least five times that of the highest density areas in Phoenix. Moreover, Boston-Providence has a far larger commercial core ("central business district" or "downtown"). The difference is that the Phoenix suburbs are denser than the Boston-Providence suburbs.

Higher density suburbs are also responsible for making Los Angeles the most densely populated large urban area in the United States, despite its much lower urban core densities relative to New York (See: *California's Dense Suburbs and Urbanization*[9]). This creates an irony that the city most associated with urban dispersion ("urban sprawl") in the United States is, in reality, the least dispersed (least "sprawling"). At the same time, no urban area in the world sprawls over a larger area than New York, as is indicated in Schedule 3.

---

[4] "Built up urban area" is the new urban area term now used by National Statistics in the United Kingdom. It may be the most descriptive short term for urban areas.

[5] Called a "population centre" in Canada and an "urban centre" in Australia.

[6] For example, in China, sub-city or sub-regional districts called "shixiaqu" (市辖区) are sometimes referred to as urban areas. Shixiaqu resemble metropolitan areas, containing both urban and rural land. Districts designated as urban often have large tracts of rural land on which urban development is anticipated.

[7] Called slums, shantytowns or favelas in various geographical areas.

[8] Wendell Cox, (2012), "The Evolving Urban Form: Dhaka," *The New Geography*, http://www.newgeography.com/content/003004-evolving-urban-form-dhaka.
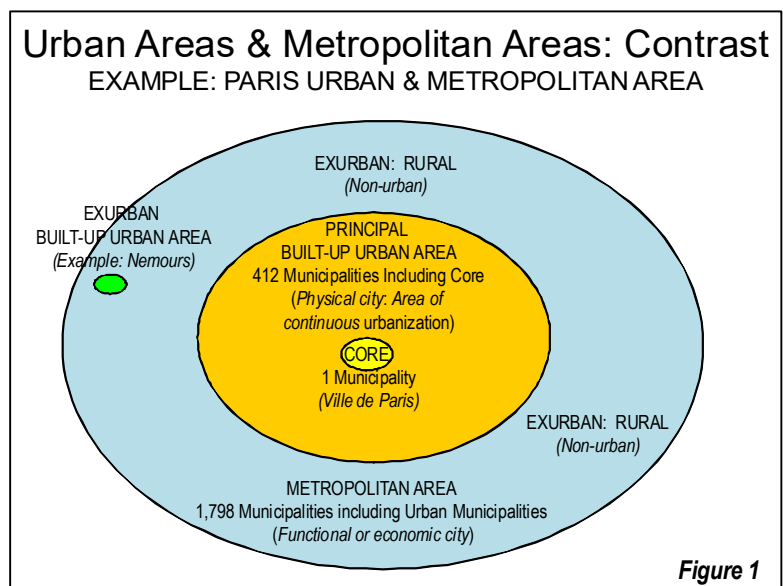

[9] See: Wendell Cox (2018), "California's Dense Suburbs and Urbanization," *The New Geography,* http://www.newgeography.com/content/005908-californias-dense-suburbs-and-urbanization.

Similarly, London and Athens have similar population densities. Yet, the core densities in Athens are considerably higher than in London. The Athens suburbs, however, are among the least dense in the high-income world. The Essen-Dusseldorf and Milan urban areas have almost identical densities, yet core densities are considerably higher in Milan. *Demographia World Urban Areas* reports the estimated population and density of *entire* urban footprints, regardless of their internal density profiles.

2.2: Urban Areas Contrasted with Metropolitan Areas

An urban area (built-up urban area or urban agglomeration) is fundamentally different from a metropolitan area. A metropolitan area is a labor market (and a housing market). It includes a principal built-up urban area (the largest built-up urban area in the metropolitan area) as well as economically connected rural areas (and smaller urban areas) to the outside. (Figure 1).[10]

Urban areas draw employees from a labor market area larger than the area of continuous development. For example, INSEE, the census authority of France defines the Paris urban area ("unité urbaine") as 2,845 square kilometers and the Paris metropolitan area (aire urbaine) as 17,100 square kilometers, indicating that more than 80 percent of the land area is outside the Paris urban area (See: *The Evolving Urban Form: Paris*[11]). Similarly, in the United States, 52 metropolitan areas with more than 1,000,000 population in 2010 had only 19 percent of land in urban use, with the remainder of 81 percent being rural (See: *Rural Character in America's Metropolitan Areas*[12]).

Figure 1

Because of the fundamental differences between urban areas (or urban agglomerations) and metropolitan areas, population comparisons should be made only within the two categories, not between. To mix the two is akin to comparing "apples and oranges."

2.3: Metropolitan Area Densities are not Urban Densities

Metropolitan area densities can be calculated, but are not a representation of urban densities, because virtually *all* metropolitan areas are composed primarily of rural land, which is therefore not urban.

---

[10] All land is that is not urban is considered rural.

[11] Wendell Cox (2018), "The Evolving Urban Form: Paris," *The New Geography,* http://www.newgeography.com/content/005912-the-evolving-urban-form-paris.

[12] Wendell Cox (2013), "Rural character in America's Metropolitan Areas*, The New Geography,* http://www.newgeography.com/content/004088-rural-character-america-s-metropolitan-areas.

Moreover, comparing metropolitan densities areas is fraught with difficulty, because (1) there are no international standards for delineating metropolitan areas, rendering them non-comparable between nations and (2) geographical "building blocks" may be too large to reasonably estimate the geographical extent of the commuting sheds that are metropolitan areas.

Even within nations, comparison of metropolitan area densities can be invalid. This is illustrated by metropolitan areas in the United States, where counties are used as the building blocks. The size of counties in the United States varies up to 1,500 times and, as a result, metropolitan densities are strongly influenced by the densities of the rural areas surrounding the built-up urban areas. The metropolitan area with the largest land area in the United States is Riverside-San Bernardino, at 27,300 square miles (71,000 square kilometers). This is nearly as large as Austria. Most of this area is well beyond commuting range, which means that Riverside-San Bernardino is much larger than its genuine labor or housing market. The situation is similar, but not as extreme in some other metropolitan areas of the United States. Metropolitan area densities in the United States therefore cannot be compared with sufficient precision.

2.4: Urban Areas Contrasted with Municipalities (Cities or Communes)

An urban area is different from a municipality (also called a city, city proper, or a local government authority). Municipalities have political boundaries that usually constitute only a part of the urban area. For example, the city of Seoul represents less than one-half of the population (and a declining proportion) of the Seoul-Incheon urban area, which extends well beyond the municipality. On the other hand, a municipality may be considerably larger than an urban area and therefore contain considerable non-urban (or rural) territory. Zaragoza, Spain is an example. A large part of the municipality of Mumbai is rural, composed of the Rajiv Gandhi National Park and thus not included in the urban area.

The translated term "city" is generally used to denote sub-provincial (or in some cases provincial) government areas in China. These were formally referred to as "prefectures." Generally, they include rural areas and extend far beyond their built-up areas (such as Beijing, Tianjin, Wuhan and Guangzhou). The city of Chongqing, which has the largest population of any entity called a city (municipality) in the world stretches far beyond any reasonable definition of a metropolitan area as a commuting shed. Like the Riverside-San Bernardino metropolitan area, Chongqing covers a land area similar to that of Austria. Most of the municipality is well beyond the commuting range of the urban area.

The Chinese term "shi" is popularly translated as "city" in English. Chinese "shi" and equivalent terms are divisions of divisions of provinces or province equivalent. China is divided into more than 3,000 "shi" (including equivalent geographical units) which are similar in number to the more than 3,000 counties (including equivalent geographical units) of the United States. France has more than 30,000 communes, with most of their respective land areas typically being rural.

2.5: Urban Areas Contrasted with Adjacent Urban Areas

This report confines urban areas to a single metropolitan area (below) or labor market area (as an "integrated economic unit, linked together by commuting flows"). As a result, where urban areas have grown together but remain as (labor markets), they are considered "adjacent urban areas." Each component urban area is separately listed.

Examples of adjacent urban areas follow:

- The Pearl River Delta urban areas of Shenzhen, Dongguan, Zhongshan, Jiangmen, Huizhou, Zhuhai, Guangzhou and Foshan in China's Guangdong province are very close to one-another and in some cases the built-up urban areas are virtually adjacent. Yet, this is not considered a single urban area because there is not a single labor market. *Demographia World Urban Areas* considers Guangzhou and Foshan as a single urban area, because they have become more economically integrated than the other urban areas (such as by Metro system that serves both cities). Otherwise, each of the other urban areas in the Pearl River Delta economic region is considered to be separate. The Hong Kong and Macau urban areas are also adjacent to the adjacent urban areas of Guangdong (see "Adjacent International Urban areas," below). See: *Ultimate City: Guangdong-Hong Kong-Macau Greater Bay Area (with Photographic Tour).*[13] Plans call for significant transport improvements that could make all or part of this area a single labor market in the future.

- The Yangtze River Delta (broadly defined to include Hangzhou Bay) contains a number of nearby urban areas stretching from Zhoushan/Ningbo to Shanghai, and Nanjing. This includes the municipalities (prefectures) of Zhougshan, Ningbo, Shaoxing, Hangzhou, Jiaxing, Shanghai, Suzhou, Wuxi, Changzhou, Zhenjiang, Nanjing and other smaller urban areas. Adjacent urban areas in the Yangtze River Delta extend from Shanghai, through Suzhou and Wuxi to Changzhou. There are two other adjacent urban areas, Hangzhou and Shaoxing as well as Ningbo and Zhoushan. There is rural territory between Changzhou and Zhenjiang, Zhenjiang and Nanjing, Shanghai and Hangzhou as well as between Shaoxing and Ningbo. Plans call for significant transport improvements that could combine some of these adjacent urban areas into single urban areas in the future.

- The coast of Japan from Tokyo-Yokohama to Osaka-Kobe-Kyoto has nearly "grown together." Yet, this ribbon of urbanization is far too large to be a single metropolitan area (labor market).

- The same applies to the Northeastern "megalopolis" of the United States. There is continuous development from the Philadelphia urban area, through the New York urban area, to the Hartford urban area. This continuous urbanization is considered as separate built-up urban areas because there are three labor markets (metropolitan areas).

2.6: International Urban Areas

Urban areas (and metropolitan areas) are confined to a single nation, unless there is virtual freedom of movement (principally labor) between the adjacent nations (or jurisdictions). Freedom of movement means that there are no customs or immigration facilities at borders, or that there are arrangements (such as readily available permits) for residents to live and/or work in any of the adjacent jurisdictions. Currently, this condition is met only between some continental nations of the European Union. For example, the Lille urban area is in both France and Belgium yet is considered a single urban area because there is freedom of labor movement without trade, immigration or customs barriers. Treaty provisions render Geneva (Switzerland)-Annemasse (France), Basel (Switzerland) along with suburban areas of France and Germany

as a single built-up urban area. Similarly, Milan together with Chiasso in Switzerland is a single built-up urban area (Table 1)

Table 1 International Urban Areas	
Urban Area	*Part of Urban Area Also In*
Aachen, Germany	Netherlands
Basel, Switzerland	France & Germany
Geneva, Switzerland	France
Lille, France	Belgium
Milan, Italy	Switzerland

However, Detroit-Windsor El Paso-Ciudad Juarez and San Diego-Tijuana are not considered single urban areas because border controls restrict the free movement of labor. In China's Pearl River Delta, the Macao and Hong Kong urban areas are considered separate from Guangdong urban areas due, at least partly, to the international-style border between the jurisdictions.

2.7: Combined Urban Areas

In the United States, single labor markets can be either metropolitan areas, or combined statistical areas (CSAs), which are, in effect, larger metropolitan areas or metropolitan regions, with somewhat less strong commuting interchanges.[14] Where continuous urban footprints exist within CSA. *Demographia World Urban Areas* combines them into a single built-up urban area. For example, the New York built-up urban area stretches from New York to other US Census Bureau defined urban areas, such as Bridgeport-Stamford, New Haven, and Trenton and others (Table 2).

In addition, the US Census Bureau has retained some urban areas, despite their now continuous urbanization with other urban areas within the same metropolitan areas.[15] *Demographia World Urban Areas* combines them into a single built-up urban area. Cleveland and Lorain, Ohio and Orlando and Kissimmee, Florida are examples of this (Table 2).

In Canada, where the national census authority (Statistics Canada) defines metropolitan areas, the Toronto, Hamilton and Oshawa metropolitan areas are also considered a single labor market and are combined into a single combined urban area. While Canada does not designate combinations of metropolitan areas, Statistics Canada has indicated that if criteria similar to that of the United States were applied the Toronto, Hamilton and Oshawa metropolitan areas, they would constitute a combined metropolitan area.[16]

Other adjacent urban areas are combined in nations that do not report built-up urban area data. For example, Guangzhou and Foshan, Tehran and Karaj as well as Johannesburg and Pretoria are combined because of strong transport links that make commuting feasible.

---

[14] Metropolitan areas require a 25 percent employment interchange between constituent counties (US metropolitan areas are no longer based on central municipalities, but now use "central counties"). Combined statistical areas require a 15 percent employment interchange between metropolitan areas.

3. POPULATION AND LAND AREA ESTIMATION

There are now multiple sources for population estimates within urban area polygons. A review of the available sources has found the Commission Global Human Settlement (GHS2015) 250 meter database to be the most appropriate for the purposes of *Demographia World Urban Area* population estimation.[17]

Some census authorities report urban area population and land area data relatively consistent with international practice. This includes, for example, Australia, Canada, Denmark, Finland, the Netherlands, Norway, Sweden, and the United Kingdom and the United States. The *Demographia* estimates are based on that data in most cases and also in Paris (France).The source of such estimates is shown in the column labeled "B" in Schedules 2-5.

It is not possible to precisely coordinate the population and land area for the reporting year. Therefore population density estimates should be considered approximate, despite the fact that they are reported precisely from the data used.

The current year population estimate is modeled from the base year population, adjusted by population projections between the base year and the current year (Table 3). Most population projection annual percentages are derived from United Nations data.

4: DATA ISSUES

New census data and estimates as well as later satellite imagery has led to revisions in recent editions of *Demographia World Urban Areas*:

- Statistical communiqués from some Chinese cities have shown population growth rates since 2010 that are far below earlier projections. This publication substitutes annual estimates based on the rate of growth of from the 2010 census to the latest available year, in larger urban areas where sufficient data is available (See related article: *Beijing and Shanghai Limit Population Growth*[18]).

- Canada has revised its method for delineation of built-up urban areas (population centres) in the 2016 census. Urban areas are now comprised of qualifying small area "blocks," rather than the former municipalities. Some municipalities included large tracts of rural land and this revision removed these areas from the urban areas. As a result, urban area densities in Canada are higher and land areas smaller than previously reported.

Figure 2

5: HIGHLIGHTS

In recent years, the world has become more than one-half urban for the first time in history (51 percent in 2021). Yet, it would be a mistake to believe that the world's urban residents live in settings similar to 5th Avenue in New York or within the fourth ring road of Beijing or in inner Paris, or for that

---

[18] Wendell Cox, (2019), "Beijing and Shanghai Limit Population Growth," *The New Geography*, http://www.newgeography.com/content/006258-beijing-and-shanghai-limit-population-growth.

matter in large urban areas. Nearly all of the world's large urban areas have extensive suburbs of much lower density outside the historic cores that are characterized by higher densities. Some post-automobile urban areas have little or no high-density urban core (See: *What is a Half-Urban World?*[19])

Median Resident Analysis: In 2021, the median world urban resident[20] lives in an urban area with a population of approximately 595,000 to 599,000. This would include (most precisely) Grand Rapids, Michigan in the United States as well as Yaroslavl (Russia), Denizli (Turkey), Libreville (Gabon), Tianshui, Gansu, China, Siliguri, West Bengal (India), Otsu (Japan), Hamadan (Iran) and Sangali, Maharashtra (India).

Megacities: There are 36 megacities in the world (urban areas over 10 million population), as indicated in Figure 2. A total of 90 urban areas have 5,000,000 or more population.

6: SPECIFIC BUILT-UP URBAN AREAS

Table 4 below notes identify *some* additional components of urban areas that (1) might be thought to be separate urban areas, or (2) may be classified separate by statistical agencies or are (3) listed to indicate to better describe the geography of an urban area. Urban areas include many more components that are not indicated in Table 4. For example, the Paris urban area has more than 400 municipal jurisdictions.

7. CAUTION: TREND ANALYSIS

Demographia World Urban Areas is a continuing project and attempts to provide "state of the art" data. Revisions are made as more accurate satellite photographs and population estimates become available. As a result, *Demographia World Urban Areas* is not intended for trend analysis.

Year-to-year changes indicated in population and land area may merely reflect better data that was not available before and may not, therefore indicate a trend. Moreover, the current year population estimates are a projection from a base year. Changes in population projection rates can result in substantial current year population estimates that may or may not reflect actual changes in population. Further, population and land area base data is updated as new data is obtained.

8: BACKGROUND: *DEMOGRAPHIA WORLD URBAN AREAS*

Demographia World Urban Areas was established to offer consistency urban density analysis, in hopes of replacing anecdotal comparisons between cities that are often invalid. The built-up urban area is the only level at with sufficient data to estimate the densities of the urban organism at anything approximating international standards.

Demographia World Urban Areas was the first source to identify the under-estimation of population in some of the world's largest urban areas. For example, *Demographia's* early estimates of the Jakarta, Delhi, Manila and Kuala Lumpur urban area populations were far higher than reported by others at the time. Other sources have since revised their estimates upward.

Some of the earlier, lower estimates by other sources were, in actuality, municipal estimates that did not sufficiently take into consideration the spread of urbanization beyond the core city limits or other geographical limits. *Demographia's* larger population estimates were the result of actual satellite map examination of the urban form. Similarly, in many cases, *Demographia's* estimates have been lower than reported elsewhere for the same reason --- some other urban area estimates have included rural areas, which, by definition, are not urban.

9: COVER ILLUSTRATION: RETIRO RAILWAY STATION: BUENOS AIRES

The cover illustration is Retiro Railway Station in Buenos Aires, with the Rio de la Plata in the background. At this point, the Rio de la Plata is 46 kilometers (29 miles) wide, with the opposite shore being in Uruguay. The Rio (river) del la Plata is really an estuary (bay or gulf), which widens to about 220 kilometers (140 miles) at its mouth and is considered to be the widest river in the world. Approximately 40 miles to the north, and beyond the horizon in the picture, the Rio de la Plata reaches its northern end, where it is fed by the Parana and Uruguay Rivers.

Retiro Station is located near the northern terminus of Avenida 9 de Julio, which at its widest has 18 lanes of traffic and has been called the widest street in the world. Retiro is the largest suburban rail station in Buenos Aires. About 2.7 kilometers (1.7 miles) to the south, on the Avenida 9 de Julio is Constitucion Station, which also serves suburban trains.

Demographia World Urban Areas estimates the population of the Buenos Aires urban area at 16.2 million residents in 2021, 2.9 million of whom live in the core municipality of Buenos Aires. From the 1947 to 2010 censuses, the municipality lost about 100,000 residents. United Nations data indicates that in 1950, the Buenos Aires urban area had about 5.1 million residents. Over the past seven decades, *all* of the population growth has been outside the municipality, with suburban areas adding about 11 million residents. This is a typical pattern for core municipalities around the world that have not expanded their geographical size (either by annexation or consolidation with another municipality).
