## Periodic Table Challenge

$\qquad$
How many words can you make using the chemical symbols in the Periodic Table?
You may use the symbols more than once in a word, but you cannot mix up the letters. The symbols must be used as they appear in the Periodic Table. You may also use words with only one or two letters as well as the names of people, places, and other elements.

You must provide the symbols (in correct format) as well as the word.

> Examples:
> $\mathrm{He}+\mathrm{At}=$ Heat
> $\mathrm{N}+\mathrm{O}+\mathrm{B}+\mathrm{O}+\mathrm{Dy}=$ Nobody

Awards will be given for the following categories:
(1) most words, (2) word with the most letters, and (3) word with the most symbols!
$\qquad$ !
