ExcelsiusGPS™

Robotic Spine Surgery

New System Provides Safer, More Accurate Spine Surgery

ExcelsiusGPS™ is a new, cutting-edge robotic technology designed to enhance the safety and accuracy of minimally invasive spine surgery. Since Florida Hospital is one of only six hospitals in the United States to currently use this system, our patients will receive the latest, most advanced treatment available.

ExcelsiusGPS™ Advantages

The system provides enhanced visualization of patient anatomy throughout the procedure to improve treatment. It also streamlines the surgical workflow and reduces overall radiation exposure to surgeons and staff.

- Less blood loss
- Less muscle damage
- Less risk of infection
- Faster recovery

About Us

With three world-class spine centers located throughout Central Florida, Florida Hospital brings state-of-the-art, compassionate care to patients convenient to your area. It's that simple to get leading care for your back and neck pain. Our team of experts focuses on every aspect of spinal health, including neurology, neurosurgery, orthopedic surgery, pain management, and physical therapy.
