

E-commerce statistics for individuals

Statistics Explained

Data extracted in December 2018.
Planned article update: January 2020.

This article takes a closer look at individuals' electronic commerce (e-commerce) in the European Union . It is based on the results of the 2018 Survey on ICT (information and communication technology) usage in households and by individuals.

General overview

Almost 7 out of 10 internet users in the 12 months prior to the survey (hereafter referred as "internet users") made online purchases in the same period. Overall, the share of e-shoppers in internet users is growing, with the highest proportions being found in the 16-24 and 25-54 age groups (73 % each).

The proportion of e-shoppers varied considerably across the EU, ranging from 26 % of internet users in Romania to 87 % in the United Kingdom.

Internet use and online purchases, 2018 (% of individuals)

Table 1: Internet use and online purchases, 2018 (% of individuals) - Source: Eurostat (isoc_ci_ifp_iu) and (isoc_ec_ibuy)

The most popular type of goods and services purchased online in the EU was clothes and sport goods (64 % of e-buyers), followed by travel and holiday accommodation (53 %). E-shoppers aged 16-24 were the top age group when it came to clothes and sports goods purchases (72 %), those aged 25-54 in buying household goods (50 %) and the older age group (55-74) in online purchases of travel and holiday accommodation, together with those aged 25-54 (55 % both).

In terms of frequency, the highest proportion of e-shoppers made purchases in the three months prior to the survey once or twice (34 %) and the same proportion did so three to five times. In terms of amount spent, the highest proportion of e-buyers (41 %) bought goods or services for a total of EUR 100-499.

36 % of e-buyers made purchases from sellers in other EU countries, compared with 26 % in 2013.

E-shopping: biggest increase among young internet users

E-shopping growing steadily, with the biggest increase among young internet users .

Online shopping is very popular in the EU. The proportion of individuals aged 16-74 having purchased online in the 12 months prior to the 2018 survey stood at 60 % (Table 1). Consumers appreciate the convenience of being able to shop anytime anywhere, having access to a broader range of products, comparing prices and sharing their opinion on goods with other consumers.

87 % of individuals aged 16 to 74 in the EU had used the internet in the 12 months prior to the survey, of whom 69 % had bought or ordered goods or services for private use. Online purchases by internet users increased by 19 percentage points compared with 2008 (Figure 1).

Those aged 25-54 had the highest share of online shoppers among internet users up to 2016. In 2015 the youngest age group (16-24) overtook the EU average level to reach in 2017 and 2018 the level of 25-54 year old. E-commerce picked up over the 2008-2018 period among all age groups, with individuals aged 16-24 showing the biggest increase (28 percentage points).

Over eight in ten internet users in the United Kingdom (87 %), Denmark (86 %), the Netherlands and Sweden (84 % each), and Germany (82 %) had bought or ordered goods or services over the internet in the 12 months prior to the survey (Figure 2). On the other hand, fewer than 40 % had shopped online in Romania (26 %), Bulgaria (31 %) and Cyprus (38 %). The largest increases (15 percentage points or more) between 2013 and 2018 were recorded in Estonia, Czechia, Spain, Lithuania, Slovakia and Italy.

Internet users who bought or ordered goods or services for private use in the previous 12 months, 2013 and 2018 (% of internet users)

(*): Estonia, Latvia, Romania and Sweden data for 2013 is not comparable to 2018 due to a change in the survey methodology.

Gender, age, level of education and employment situation all affect e-commerce activity (Figure 3). For men, the share of online shoppers among internet users was slightly higher than for women (69 % and 68 %, respectively), while people aged 25-34 are more active e-shoppers (81 % of internet users) than other age groups. The proportion of internet users with higher level of education shopping online (more than eight in 10) is 34 percentage points greater than that of internet users with lower education. Employees and the self-employed (75 % of internet users) as well as students (70 %) shop online far more than retired/inactive or unemployed people (54 % both).

Most popular online purchases

Figure 4 shows that most purchases, by a third or more of e-shoppers, involved clothes and sports goods (64 %), travel and holiday accommodation (53 %), household goods (45 %), tickets for events (39 %) and books, magazines and newspapers (32 %). Fewer than one in five e-shoppers bought telecommunication services (20 %), computer hardware (17 %), medicines (14 %) and e-learning material (7 %).

Figure 4: Online purchases, EU-28, 2018 (% of individuals who bought or ordered goods or services over the internet for private use in the previous 12 months) - Source: Eurostat (isoc_ec_ibuy)

The 16-24 age-group had the highest proportions of e-shoppers purchasing clothes and sport goods (72 %), video games software, other software and upgrades (31 %), films and music (29 %), computer hardware (18 %) and e-learning material (9 %). People aged 25-54 made up the highest proportion of e-shoppers buying household goods (50 %), tickets for events (41 %), food or groceries (28 %) and telecommunication services (20 %). The older (55-74) age group took the lead in buying books, magazines and newspapers (34 %), medicines (19 %) and share the lead of travel and holiday accommodation with those aged 25-54 (54 %).

About 34 % of e-shoppers had in the three months prior to the survey bought goods or services for private use once or twice and the same proportion had done so three to five times. The proportion of e-shoppers who had made online purchases over 10 times was lowest, at 15 % (Figure 5).

Figure 5: Number of times people shopped online, EU-28, 2018 (% of individuals who bought or ordered goods or services over the internet for private use in the previous 3 months) - Source: Eurostat (isoc_ec_ibuy)

The largest proportions of people buying online once or twice is found among those aged 55-74 (40 %). People aged 25-54 stand out as making more frequent purchases: 17 % of e-shoppers in this age group bought online 6-10 times in the three months prior to the survey and 18 % did so even more often.

Over four in ten e-shoppers said they had spent EUR 100-499 for their online purchases in the three months prior to the survey. Individuals aged 16-24 led in online purchases worth less than EUR 100 and those aged 25-54 and 55-74 for purchases of EUR 100-499. Purchases worth EUR 500 or more were less popular with all age groups (Figure 6).

Purchasing online and problems encountered (2017 survey)

69 % of e-buyers reported to have no problem when purchasing online

Almost seven e-buyers out of ten reported that they did not encounter any problem when buying or ordering goods or services in the 12 months prior to the survey. The problems encountered most often by EU online shoppers were related to slower delivery than had been indicated at the time of making the purchase (17 %). Some 11 % had problems in the form of technical failure of a website while ordering or paying, 9 % had received wrong or damaged goods/services, 5 % had difficulties in finding information on guarantees and other legal rights, 4 % were confronted with final costs higher than indicated and 4 % found it difficult to make complaints and seek redress after a complaint. About 3 % of online shoppers in each case were confronted with foreign retailers not selling to customers in their country and problems with fraud (e.g. no goods/services received at all, misuse of credit card details) (Figure 7).

Main reason for not buying online (2017 survey)

The main reason for not buying online is that people prefer to shop in person

Figure 8 shows that the main reason given for not making purchases online in the 12 months prior to the survey was a preference for shopping in person in order to be able to see the products before purchasing them, out of loyalty to shops or by force of habit (69%). Other, much less important factors were worries as to privacy or the security when paying online (25%), people believing that they lacked the necessary skills or knowledge to make online purchases (19%), concerns about receiving or returning goods (16%), and not having a suitable payment card (12%). Very few of those who had not made online purchases considered that the delivery of goods would be a problem (6%).

e-shopping from other EU countries

36 % of online shoppers bought or ordered goods or services from sellers in other EU countries

Cross-border online purchases can be an indicator of the smooth functioning of the single market for e-commerce and the extent to which consumers make use of wider choices and lower prices. A large majority of e-shoppers in the 12 months prior to the survey made online purchases from sellers in their own country: 88 %, i.e. down by 1 percentage point from 2013 (Figure 9). An increase could be observed for purchases from sellers in other EU countries (from 26 % in 2013 to 36 % in 2018) and from sellers outside the EU (from 14 % in 2013 to 26 % in 2018).

Physical goods have the biggest part in e-buying (2017 survey)

Eight out of 10 people who bought from abroad purchased physical goods

According to Figure 10, of the e-shoppers who in the 12 months prior to the survey made purchases from sellers outside their own country, 80 % bought or ordered physical goods such as electronics, clothes, toys, food, groceries, books, CDs/DVDs. Lower proportions of e-shoppers made online purchases from abroad of travel, accommodation or holiday arrangements (34 %) and products downloaded or accessed from websites or apps (25 %).

Only 16 % of the e-shoppers bought or ordered from abroad other services, such as e-tickets for events (sport events, concerts or other entertainment events) or telecommunication services (subscription of telephone services, SIM cards).

Data sources

The data in this article are based on the results of annual surveys on ICT usage in households and by individuals. Data for 2018 were aggregated from micro data transmitted by all Member States and some non-EU countries (Iceland, Norway, Montenegro, the former Yugoslav Republic of Macedonia, Serbia, Turkey, Kosovo¹ and Bosnia and Herzegovina). They are available on the Eurostat website (see link below). Researchers can apply for access to the micro data.

The 2018 survey results are based on responses from a total of 157 085 households from EU-28 having at least one person aged 16-74, and 208 618 individuals from EU-28 aged 16-74 across the EU. Individuals were asked about the last time they used the internet, how often they used it, use by device type away from home or usual place of work, internet activities, certain aspects of the collaborative economy, activities related to e-government, e-commerce and e-skills.

Most countries collected data in the second quarter of 2018. The reference period for the questions on frequency of online shopping and amounts spent was the three months prior to the survey. For the other data relating to the e-commerce activities, the reference period was the 12 months prior to the survey, as such activities tend to be irregular and seasonal.

Levels of education are defined according to [ISCED](#) -2011 as follows: high (tertiary, ISCED 5, 6, 7 or 8); medium (upper secondary and post-secondary non-tertiary, ISCED 3 or 4); low (at most lower secondary, ISCED 0, 1 or 2).

Context

The findings of this survey are used for monitoring several EU policies, in particular the [Digital Agenda](#), which is one of the pillars of the Europe 2020 strategy (which sets objectives for the growth of the European Union by

¹This designation is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo Declaration of Independence

2020). The Digital Agenda proposes to better exploit the potential of Information and Communication Technologies (ICTs) in order to foster innovation, economic growth and progress. One of its main objectives is the completion of the [Digital Single Market](#), in which the free movement of persons, services and capital is ensured and where the individuals and businesses can seamlessly access and exercise online activities under conditions of fair competition, and a high level of consumer and personal data protection, irrespective of their nationality or place of residence. The completion of the Digital Single Market is currently one of the political priorities of the European Commission. It covers three areas: promoting better online access to goods and services across Europe; designing an optimal environment for digital networks and services to develop; ensuring that the European economy and industry takes full advantage of the digital economy as a potential driver for growth.

At the end of 2015 the European Commission published a framework called Monitoring the Digital Economy and Society 2016–2021. This document describes the main policy developments and outlines the main data requirements to monitor European digital policies, information and communication technologies as well as their impact on the economy and society in the period 2016–2021. It reviews existing data sources and lists new areas and data sources to be made use of in the future.
