

## 3.2 <br> Significant Figures and Scientific Notation

## SIGNIFICANT FIGURES

## RULES FOR COUNTING SIGNIFICANT FIGURES

## Rule \#1:

All Non-zero integers always count as significant figures.

3456 has
4 significant figures

## RULES FOR COUNTING SIGNIFICANT FIGURES

Rule \#2:

Leading zeros do not count as significant figures.
0.0486 has

3 significant figures

## RULES FOR COUNTING SIGNIFICANT FIGURES

Rule \#3:

All zeros between non-zeros numbers always count as significant figures.
16.007 has

5 significant figures

## RULES FOR COUNTING SIGNIFICANT FIGURES

## Rule \#4:

Trailing zeros are significant only if the number contains a decimal point.
9.300 has 4 significant figures

9300 has 2 significant figures

## RULES FOR COUNTING SIGNIFICANT FIGURES

Pacific Ocean . ------------------------------- Atlantic Ocean

## SIG FIG PRACTICE

How many significant figures in each of the following?
$1.0070 \mathrm{~m} \rightarrow \quad 5$ sig figs
$17.10 \mathrm{~kg} \rightarrow \quad 4$ sig figs
$100,890 \mathrm{~L} \rightarrow \quad 5$ sig figs
$3.29 \times 10^{3} \mathrm{~s} \rightarrow \quad 3$ sig figs
$0.0054 \mathrm{~cm} \rightarrow \quad 2$ sig figs
$3,200,000 \rightarrow 2$ sig figs

## RULES FOR SIGNIFICANT FIGURES IN MATHEMATICAL OPERATIONS

Addition and Subtraction:

The number of decimal places in the result equals the number of decimal places in the least precise measurement.
$6.8+11.934=18.734 \rightarrow 18.7$ (3 sig figs)

## SIG FIG PRACTICE

## Calculation

$3.24 \mathrm{~m}+7.0 \mathrm{~m}$
$100.0 \mathrm{~g}-23.73 \mathrm{~g}$
$0.02 \mathrm{~cm}+2.371 \mathrm{~cm}$
713.1 L-3.872 L
$1818.2 \mathrm{lb}+3.37 \mathrm{lb}$
2.030 mL - 1.870 mL

## Calculator says:

10.24 m
76.27 g
2.391 cm
709.228 L
1821.57 lb
0.16 mL

## Answer

10.2 m
76.3 g
2.39 cm
709.2 L
1821.6 lb
0.160 mL

## RULES FOR SIGNIFICANT FIGURES IN MATHEMATICAL OPERATIONS

## Multiplication and Division:

\# sig figs in the result equals the number in the least precise measurement used in the calculation.
$6.38 \times 2.0=12.76 \rightarrow 13(2$ sig figs $)$

## SIG FIG PRACTICE

| Calculation | Calculator says: | Answer |
| :--- | :--- | ---: |
| $3.24 \mathrm{~m} \times 7.0 \mathrm{~m}$ | $22.68 \mathrm{~m}^{2}$ | $23 \mathrm{~m}^{2}$ |
| $100.0 \mathrm{~g} \div 23.7 \mathrm{~cm}^{3}$ | $4.219409283 \mathrm{~g} / \mathrm{cm}^{3}$ | $4.22 \mathrm{~g} / \mathrm{cm}^{3}$ |
| $0.02 \mathrm{~cm} \times 2.371 \mathrm{~cm}$ | $0.04742 \mathrm{~cm}^{2}$ | $0.05 \mathrm{~cm}^{2}$ |
| $710 \mathrm{~m} \div 3.0 \mathrm{~s}$ | $236.6666667 \mathrm{~m} / \mathrm{s}$ | $240 \mathrm{~m} / \mathrm{s}$ |
| $1818.2 \mathrm{lb} \times 3.23 \mathrm{ft}$ | $5872.786 \mathrm{lb} \cdot \mathrm{ft}$ | $5870 \mathrm{lb} \cdot \mathrm{ft}$ |
| $1.030 \mathrm{~g} \div 2.87 \mathrm{~mL}$ | $2.9561 \mathrm{~g} / \mathrm{mL}$ | $2.96 \mathrm{~g} / \mathrm{mL}$ |

## SCIENTIFIC NOTATION

## Scientific Notation:

In science, we deal with some very LARGE numbers:

1 mole $=602000000000000000000000$

In science, we deal with some very SMALL numbers:

Mass of an electron $=$ 0.000000000000000000000000000000091 kg

## Imagine the difficulty of calculating the mass of 1 mole of electrons!

0.000000000000000000000000000000091 kg
$\times 602000000000000000000000$ ????????????????????????????????????

## Scientific Notation:

A method of representing very large or very small numbers in the form:

## M x $10^{\text {n }}$

$\checkmark \quad \mathrm{M}$ is a number between 1 and 10
$\checkmark \quad \mathrm{n}$ is an integer

Step \#1: Insert an understood decimal point
Step \#2: Decide where the decimal must end up so that one number is to its left

Step \#3: Count how many places you bounce the decimal point (This is equal to n )

Step \#4: Re-write in the form $\mathrm{M} \times 10^{\mathrm{n}}$

## $2.5 \times 10^{9}$

The exponent is the number of places we moved the decimal.

Step \#2: Decide where the decimal must end up so that one number is to its left

Step \#3: Count how many places you bounce the decimal point

Step \#4: Re-write in the form M x $10^{n}$

## $5.79 \times 10^{-5}$

The exponent is negative because the number we started with was less than 1.

## Practice Problems:

> $98,500,000=9.85 \times 10^{?}$
$9.85 \times 10^{7}$
> $64,100,000,000=6.41 \times 10^{\text {? }}$
$6.41 \times 10^{10}$
> $279,000,000=2.79 \times 10^{?}$
$2.79 \times 10^{8}$

## EXAMPLE

The Distance From the Sun to the Earth is $93,000,000$ miles
93,000,000 Standard Form
9.3 $\times 10^{7} \quad$ Scientific Notion

## Scientific Notation to Standard Form

Move the decimal to the right - The number to the power of 10 .

## Example:

- $3.4 \times 10^{5}$ in scientific notation
- $3.4=340000$ (Move the decimal right five places)
- 340,000 in standard form

## Practice Problems:

$>6.27 \times 10^{6}$
6,270,000
$>\quad 9.01 \times 10^{4}$
90,100
$>4.56 \times 10^{3}$
4,560

# Adding and Subtracting using Scientific Notation: 

Whenever you add or subtract two numbers in scientific notation, you must make sure that they have the same exponents.

## Practice Problems

- $\quad 4.2 \times 10^{6}+3.1 \times 10^{5}=? ?$

Make the exponents the same (either 5 or 6 )

- $42 \times 10^{5}+3.1 \times 10^{5}=$

$$
45.1 \times 10^{5}=4.51 \times 10^{6}
$$

## Practice Problems

$$
\begin{aligned}
& 7.3 \times 10^{-7}-2.0 \times 10^{-8}=? ? \\
& 71 \times 10^{-8}=7.1 \times 10^{-7}
\end{aligned}
$$

## Multiplying and Dividing using Scientific Notation:

- When you multiply two numbers in scientific notation, you must add their exponents.
- When divide two numbers, you must subtract denominator's exponent from the numerator's exponent

## Practice Problems:

$\left(4.5 \times 10^{12}\right) \times\left(3.2 \times 10^{36}\right)=? ?$
$(4.5)(3.2) \times 10^{(12+36)}$
$14.4 \times 10^{48}$

## Practice Problems:

$\left(5.9 \times 10^{9}\right) \times\left(6.3 \times 10^{-5}\right)=? ?$
$(5.9)(6.3) \times 10^{(9+(-5))}$
$37.17 \times 10^{4}$

## Practice Problems:

$\left(2.8 \times 10^{14}\right) /\left(3.2 \times 10^{7}\right)=? ?$
(2.8) / (3.2) $\times 10^{(14-7)}$
$0.875 \times 10^{7}$

## Practice Problems:

$\left(5.7 \times 10^{19}\right) /\left(3.1 \times 10^{-9}\right)=? ?$
$(5.7) /(3.1) \times 10^{(19-(-9))}$
$1.84 \times 10^{28}$
