Zacks Opinion

The fund is a good choice for those seeking to bet on large-cap stocks with a long-term horizon. These are large, stable companies that generate solid cash flow and add stability to the portfolio. The huge number of coronavirus-infected domestic cases led to shut down of economic activities thereby, affecting the U.S. economic fundamentals. However, Fed's dovish stance on interest rates might prove beneficial for this fund. Notably, amid the coronavirus pandemic, the Fed slashed interest rate to near zero, marking the lowest level since late 2015. Meanwhile, aggravating coronavirus pandemic may weigh on the fund. Also, simmering tensions between United States and China can hurt the fund. However, coronavirus vaccine rollout, reopening U.S. economy and solid fiscal stimulus support can help the fund.

Key Points

- One of the largest traded US ETFs
- Diversified exposure to large-cap equities
- Low expense ratio and trading costs

Reasons to Buy

Reasons to Sell

 Coronavirus vaccine rollout, dovish Fed Uncertainty surrounding the coronavirus outbreak

The data on the front page and all the charts in the report represent market data as of 10/15/2021, while the report's text is as of 10/20/2021

Holdings Breakdown

The fund holds 507 stocks in its basket. Apple Inc. (5.5%), Microsoft Corporation (5.3%) and Amazon.com Inc. (3.9%) are the top holdings in the basket. From a sector look, the ETF has the highest exposure to Information Technology (26.7%), followed by Consumer Discretionary (12.4%) and Healthcare (12.1%).

Performance

The fund mostly remained on an uptrend since the fourth quarter of 2019 till around mid-February 2020. The upside can be attributed to improving Sino-US trade relationships and the Fed's dovish stance. The fund then remained on a downtrend till late-March before starting to mostly gain again till early- September. It then declined till late-September before starting to mostly gain again (as of Oct 19, 2021). Coronavirus vaccine rollout, reopening U.S. economy and solid fiscal stimulus support might be helping the fund. It has returned 33.6% in a year.

Description

Launched in September 2010, Vanguard S&P 500 ETF (VOO) is a passively managed ETF designed to track the performance of the stocks of large U.S. companies.

Glossary

ACTIVE MANAGEMENT: A portfolio management strategy where the manager uses variety of skills and attributes (like

top-down approach, bottom-up approach, value investing, growth investing or absolute returns

strategy) in the portfolio so that the fund outperforms the benchmark index.

ALPHA: A measure of outperformance that can be calculated as the return of the fund minus the

benchmark s return. A positive alpha indicates the fund has outperformed the benchmark index

whereas negative alpha means underperformance.

AMERICAN DEPOSITORY

RECEIPT:

A negotiable non-US security that trades in the US financial market.

AUTHORIZED PARTICIPANTS: An entity chosen by an ETF sponsor to undertake the responsibility of obtaining the underlying

assets needed to create an ETF. Authorized participants are typically large institutional

organizations, such as market makers or specialists.

AVERAGE YIELD TO MATURITY: The expected rate of return on a fund s portfolio if it is held until the maturity while reinvesting all

coupon payments at the bond yield.

BASKET: A portfolio of several stocks or securities that are selected for the inclusion in the fund with

different weightings.

BETA: A measure of risk compared to the market benchmark. A beta of less than 1 indicates that the

fund is less volatile than the market and vice versa.

BID/ASK SPREAD: The difference between the highest price that a buyer is willing to pay (often called bid price) for

the underlying assets of securities of the fund and the lowest price that a seller is willing to

accept (often called as offer or ask price) for it.

CONTRARIAN: An investment style that goes against prevailing market trends (i.e. against the thinking of many)

by buying assets that are performing poorly and then selling when they perform well.

CREATION UNIT: A set of securities or underlying assets that can be created or redeemed by Authorized

Participants for a certain number of ETF shares with the fund or trust. The creation units can

vary in size ranging from 25,000 to 600,000 shares each.

DIVIDEND YIELD: A financial ratio that measures how much a company pays out in dividends each year relative to

its share price. It can be calculated as annual dividend per share divided by price per share.

EFFECTIVE DURATION: A measure of a fund s interest-rate sensitivity. The longer the duration, the more sensitive is the

fund to the changes in interest rates.

ENHANCED INDEXING: An investment idea that attempts to amplify the returns of an underlying asset or the fund with

lower tracking error. Enhanced indexing combines elements of both passive and active

management.

EXCHANGE TRADED FUND: The fund represents a basket of securities (that typically track an index), and is listed and trades

like stocks on an exchange. ETFs can be traded throughout the day in amounts as little as one

share.

EXCHANGE-TRADED NOTE: The note is a senior, unsecured, unsubordinated debt issued by a major bank. It has a maturity

date and is backed only by the credit of the issuer. The ETN however, do not actually hold any security, instead an issuing bank promises to pay to investors the amount reflected by the index

s performance (minus fees).

EXPENSE RATIO: An annual fee that the fund or ETF charge from the investors in order to provide exposure to the

underlying asset.

FUND OF FUNDS: A fund that invests in other funds instead of investing directly in stocks, bonds or other

securities.

FUNDAMENTAL INDEXING: A type of equity index in which stocks or securities are selected based on fundamental metrics

such as revenue, dividend rates, earnings or book value.

INDEX: An imaginary portfolio of securities representing a particular market or a portion of it.

INVERSE ETF: An ETF that provides opposite (inverse) exposure in the underlying index though use of various

financial and money market instruments over a specified period of time. This ETF is similar to

holding a short position in order to take profit from the falling prices.

INVESTMENT STYLE: A different style of investing such as growth, value and blend in a basket of asset.

LEVERAGED ETF: An ETF that uses various financial instruments to amplify the returns (up to 3 times) of the

underlying index over a specified period of time.

LIQUIDITY: The degree to which an asset or security can be bought or sold in the market without affecting

the asset s price. Liquidity is characterized by a high level of trading activity.

MARKET CAPITALIZATION: Represents the aggregate value of the fund or underlying asset.

NET ASSET VALUE: Value of an ETF on per share basis and is calculated as total asset minus total liabilities divided

by number of shares.

PASSIVE MANAGEMENT: A portfolio management strategy where the fund is the mirror image of the performance of the

benchmark index.

PORTFOLIO TURNOVER: A percentage of underlying assets bought and sold in a given year.

R-SQUARED: A measure of correlation with the market benchmark. An R-Squared of 100 indicates perfect

correlation of the fund that of market while an R-Squared of 0 indicates no correlation.

SECTOR ROTATION: A strategy that involves moving from one sector to another by selling the underlying assets or

securities of a sector and purchasing securities or assets in another.

SEC YIELD: A standard yield that the bond funds must pay to its shareholders based on the most recent 30-

day period covered by the fund s filings with the SEC.

SHORT ETF: An investment strategy that offers to take short position in the underlying index through various

financial instruments.

STYLE BOX: A visual representation of the fund, created by Morningstar, to determine risk-return structures of

the portfolio. A style box is comprised of nine squares, or categories, that classify securities by

size (small, mid and large cap) along the vertical axis and by value, growth and blend

characteristics along the horizontal axis.

TARGET DATE FUND: A fund that invests exclusively in the assets or securities with a certain defined maturity.

TRACKING ERROR: A measure of how closely a portfolio follows the benchmark index. It is calculated as the

difference between the returns of fund portfolio and the benchmark index.

TREASURY INFLATIONThe bonds that are issued by the U.S. Treasury to protect against inflation. These securities pay **PROTECTED SECURITIES:**Interest on an inflated principal amount (principal rises with inflation) and when the apprinting

interest on an inflated-principal amount (principal rises with inflation) and when the securities mature, investors get either the inflation-adjusted principal or the original principal, whichever is

greater.

VOLATILITY: A measure of risk calculated by the annualized daily movement in the fund price. The lower the

volatility of the fund the better it is.

VOLUME: The number of shares traded in the market during a given period of time.

YIELD CURVE: A line that plots the interest rates of bonds having equal credit quality but differing maturity

dates. The yield curve provides an idea of future interest rate change and economic activity. It

generally compares the three-month, two-year, five-year and 30-year U.S. Treasury debt

WEIGHTED MATURITY: The remaining time to maturity of the underlying securities in a portfolio. A fund with a short

average maturity is more sensitive to current interest rate fluctuations than one with longer

average maturity.
