

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, February 11, 2022 – 0730 MDT  
National Preparedness Level 1**

**National Fire Activity (February 4 – February 10, 2022):**

Initial attack activity:	Light (475 fires)
New large incidents:	4
Large fires contained:	15
Uncontained large fires: ***	0
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

\*\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\*Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

\*\*\*Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

**Predictive Services Discussion:** Above normal temperatures are forecast to continue across much of the West into the weekend. Breezy and dry conditions are expected across the central and southern Plains at times today through Monday with local critical conditions possible. Breezy and dry conditions are also possible across Georgia into north Florida on Sunday. Winds are forecast to increase across the central and southern Plains Tuesday into Wednesday next week with elevated to critical conditions possible across the High Plains.

Low pressure will bring mixed precipitation to the Great Lakes and Northeast today into Saturday with light rain across the Ohio River Valley into the Mid-Atlantic. A weak Pacific storm is forecast to affect the West early next week with light valley rain and mountain snow from the coast through the Intermountain West. The storm is forecast to strengthen as it moves into the Southwest and southern Plains midweek with widespread rain possible for the central and southern Plains. The storm may bring heavy rain and strong thunderstorms late in the week from east Texas and Oklahoma north and east through the Mid and Lower Mississippi Valley into the Ohio River Valley and southern Great Lakes.

## Fire Not Scouted and Sized Up

Operational Engagement Category

- Before taking action on the fire, address the following:
  - Can you personally observe the fire or should you use scouts?
    - Describe ways you can scout and size up a fire.
  - Do you know the location of the fire perimeter?
    - Discuss situations when the fire perimeter may not be obvious (unburned sections due to spot fires, etc.).
  - Do you know the direction of fire spread? When isn't the direction of fire spread obvious (wind shifts, spot fires, etc.)?
  - Does the direction of fire spread increase risk?
    - Talk about situations where you may have to approach the head of the fire (hiking down from a helispot, approaching from an existing road, erratic winds, etc.).
  - Do you know the fuels and their condition? What kind of information will you assume from what you already know about fuel types (spot fires in fir, extreme fire potential in flashy fuels, etc.)?
  - What information can aerial resources provide about the fire?
  - Do topographic hazards exist? What can you assume from the kind of terrain near and within the fire perimeter (slope, chimneys, aspect, etc.)?
  - Does enough information exist to establish a plan of attack? When do you have enough information to begin fighting fire? What do you need to know?
  - Do other dangers exist? Have you talked about factors specific to the work area (hunters in the vicinity, drought conditions, snag patches, etc.)?
- To reduce the risks:
  - Post lookouts until the fire is sized up and escape routes and safety zones are established.
  - Retreat if the situation is too complex. Review fires where you had to wait until your assigned area of the fire was scouted and sized up before you were allowed onto the fireline.
