

Significant Figure Rules

Determining Number of Significant Figures (Sig Figs)

1) All non-zero integers are significant.

Example 1: 412945 has 6 sig figs.

- 2) All <u>exact</u> numbers have an unlimited number of sig figs.
 - Example 2: If you counted the number of people in your class to be <u>exactly</u> 35, then 35 would have an *unlimited* number of sig figs.
 - Example 3: It has been determined that <u>exactly</u> 60 seconds are in a minute, so 60 has an *unlimited* number of sig figs.
- Zeros are significant depending on what kind of zeros they are.
 a. Zeros that are between non-zero integers are always significant.
 - Example 4: The zeros in 100045, 600.4545, and 23.04 are all significant because they are between non-zero integers.
 - b. Zeros that come before non-zero integers are never significant.
 - Example 5: The zeros in 098, 0.3, and 0.00000000389 are **not** significant because they are all in front of non-zero integers.
 - c. If the zeros come after non-zero integers and are followed by a decimal point, the zeros are significant.
 - Example 6: The zeros in 1000, are significant because they are followed by a decimal point.
 - d. If the zeros come after non-zero integers but are not followed by a decimal point, the zeros are not significant.
 - Example 7: The zeros in 1000 are not significant because they are not followed by a decimal point.
 - e. If the zeros come after non-zero integers and come after the decimal point, they are significant.
 - Example 8: The zeros in 9.89000 are significant because they come both after nonzero integers and after the decimal point.

ACADEMIC CENTER FOR EXCELLENCE

Addition/Subtraction

When adding/subtracting, the answer should have the same number of decimal places as the limiting term. The limiting term is the number with the least decimal places.

Example 9:

6.22 53.6	← limiting term has 1 decimal place
+ 45.09091	
119.22191	\rightarrow round \rightarrow 119.2 (answer has 1 decimal place)

Example 10: 5365.999 \leftarrow limiting term has 3 decimal places $\begin{array}{r} -234.66706 \\ \hline 5131.33194 \rightarrow \text{round} \rightarrow \textbf{5131.332} \text{ (answer has 3 decimal places)} \end{array}$

Multiplication/Division

When multiplying/dividing, the answer should have the same number of significant figures as the limiting term. The limiting term is the number with the least number of significant figures.

Example 11:	$503.29 \text{ x } 6.177 = 3108.82233 \rightarrow \text{round} \rightarrow 3109$
	↑
	limiting term has 4 sig figs
Example 12:	$\frac{1000.1}{243} = 4.11563786 \rightarrow \text{round} \rightarrow 4.12$
	↑ limiting term has 3 sig figs

Conversions

When converting a number, the answer should have the same number of significant figures as the number started with.

Example 13: 52.4 in x $\underline{1 \text{ ft}} = 4.3666666667 \text{ ft} \rightarrow \text{round} \rightarrow 4.37 \text{ ft}$ $\uparrow \qquad 12 \text{ in}$ 3 sig figs

Sample Problems

How many significant figures does each of the following contain?

- 1. 54
- 2. 45678
- 3. 4.03
- 4. 4.00
- 5. 400
- 6. 400.
- 7. 0.041
- 8. 65000
- 9. 190909090
- $10.\ 0.00010$

Which number in each of the additions/subtractions is the limiting term, and how many decimal places should the answer of each addition/subtraction have?

11. 55.43 + 44.333 + 5.31 + 9.2
 12. 890.019 + 890.1234 + 890.88788
 13. 69.99999 - 45.4444444

Which number in each of the multiplication/division problems is the limiting term, and how many sig figs should the answer of each multiplication/division have?

14. 343.4 / 34.337 15. 0.000000003 x 30.03030

Perform the following operations and round using the correct sig fig rule.

16. 17.12 + 30.123 17. 35.010 / 1.23 18. 1000.00 - 62.5 19. 0.1700 x 1700. x 1700 20. 15.05 + 0.0044 + 12.34
