Banks in Qatar have recognized the role played by digital transformation in driving growth and efficiency. Banks are reassessing their business models to ensure that they are profitable and remain sustainable in the future. Change in economics, policies and regulations, coupled with the disruption and innovation triggered by technology, compel banks and financial institutions to work on their strategies and push the boundaries when it comes to technology.

In a bid to meet the demands of new age customers, banks are taking the path of transformation and innovation. This leaves a lot of work to be done. Be it customer experience on digital platforms or the turnaround time to service any kind of request, banks have to ensure that the evolution of their services, products and processes is consistent to help them stay ahead of the curve.

The 7th Edition of New Age Banking Summit, Qatar brought together top thought leaders and industry experts who shared the best and next practices that make use of latest technologies, case studies and strategies, thus providing the opportunity to discuss and deliberate on the solutions and opportunities that exist in this New and Cognitive Age of Banking.

The Summit was attended by over 160 banking innovators and technology leaders.

We would like to thank all our speakers, partners and delegates for their continued support. We look forward to welcome you again at the next edition!
