New York Life Insurance Company

Cigna EB closing adds more business diversity, incremental liability risk to its profile

Summary

The Aaa insurance financial strength ratings of [New York Life Insurance Company](#) (NYLIC) and its affiliates, [New York Life Insurance and Annuity Corporation](#) (NYLIAC) and [Life Insurance Company of North America](#) (LINA; collectively, New York Life or NYL), are based on the company's intrinsic strengths as the largest US mutual life insurer, with a leading position in the US life insurance market and a large, profitable in-force block of participating whole life insurance (par WL), its strong business diversity and liquidity, now including Cigna's leading employee benefits (EB) business, good distribution, and strong capitalization. The firm's commitment to mutuality, with a long-term focus on policyholders and creditors, is a key positive rating consideration. We expect a US government stimulus-led economic recovery and mass vaccinations to gradually improve the operating environment for life insurers, including NYL.

These strengths are mitigated by a higher-risk liability profile than peers, which, while very diversified, including a sizable asset manager, has drifted away from par WL, the most creditworthy product. While par WL remains a key focus for the company, the expansion into other products has continued with NYL's acquisition of Cigna's EB business, which broadens the company's already diversified business profile in terms of premiums, earnings and reserves, but further reduces the relative proportion of par WL reserves to other, higher-risk products. Material holdings of higher-risk assets (including below investment-grade bonds and private middle market loans), and an NAIC risk-based capital ratio that is lower than highly-rated mutual peers, particularly in a stress case, also mitigate New York Life's corporate strengths.

This report was republished on May 11, 2021 with an update to the ratings table outlook.

Exhibit 1

Lower 2020 profitability was driven by elevated mortality and realized investment/hedging losses

Net income for 2017 excludes a favorable tax adjustment of \$602 million related to the new US tax law recorded at the end of the year.

Source: Moody's Investors Service and company filings

Credit strengths

- » Top-tier position in the domestic individual life insurance business; leading position in group life and disability income with the Cigna EB block
- » Large block of individual life insurance containing significant embedded profits
- » Productive and well-established career agency distribution force
- » Well diversified investment portfolio, strong liquidity, and strong capitalization

Credit challenges

- » Shifting liability profile away from par WL toward relatively higher-risk liabilities
- » Material holdings of higher-risk assets, including below investment-grade bonds, middle market loans, alternative investments, as well as real estate-related investments
- » Capital adequacy, as measured by a NAIC RBC, lower than peers in a stress
- » Low interest rates, more elevated mortality, sales pressures in current environment

Outlook

The negative outlook on NYL reflects incrementally greater liability risk, given the addition of the Cigna EB liabilities that continue to move further away from its core par whole life insurance focus. The integration of Cigna EB into NYL, as well as excess mortality, rating migration, and investment losses and their impact on NYL's RBC, are some of the things we will be watching in 2021.

Factors that could lead to an upgrade

The following factors could return NYL's ratings to stable:

- » The successful integration of the Cigna EB transaction, with group life and disability income persistency, sales, and earnings as expected
- » Strategic focus on the growth of par WL and risk-sharing products relative to less creditworthy products
- » Asset quality, losses and impairments consistent with Moody's expectations
- » Company action level NAIC RBC ratio above 450% on a consistent basis

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody's.com for the most updated credit rating action information and rating history.

- » Adjusted financial leverage of less than 20%; earnings coverage greater than 10x.

Factors that could lead to a downgrade

- » A downgrade of the US government rating
- » Challenges integrating the Cigna EB transaction, contributing to higher-than-expected lapse rates, weakened market positions, and declining group life and/or disability income earnings
- » Further shift away from par WL and risk-sharing products
- » A significant increase in high risk assets, losses and impairments relative to 2019 levels (e.g., GAAP 2019 YE HRA at 92%)

Key indicators

Profile

New York Life Insurance Company and its affiliated entities provide individuals and businesses with life insurance products, annuities, long-term care insurance, pension products, mutual funds, and a variety of investment products and services.

According to the Life Insurance Marketing and Research Association (LIMRA), New York Life was among the largest sellers of life insurance products and fixed annuities in the US in 2020. In addition to NYLIC, the other principal US life affiliates in the group is NYLIAC, and, since the close of the Cigna EB transaction, LINA, the primary subsidiary housing the EB business, as well as smaller New York subsidiary, New York Life Group Insurance Company of NY (formerly known as Cigna Life Insurance Company of New York) (not rated). New York Life's primary asset management subsidiary is New York Life Investment Management Holdings, LLC (NYLIM). The company had approximately \$702 billion in assets under management, as of December 31, 2020, including NYLIM's affiliates. Separately, New York Life maintains an insurance operation in Mexico, Seguros Monterrey New York Life.

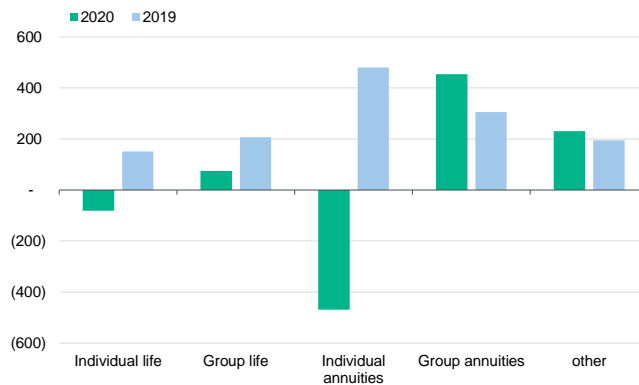

On December 31, 2020, New York Life completed the acquisition of Cigna Corporation's group life and disability insurance business - now called "New York Life Group Benefit Solutions" - for \$6.3 billion, making New York Life a top 5 player in the group insurance business.

Detailed credit considerations

Moody's rates New York Life Aaa for insurance financial strength, which is one notch higher than the adjusted scorecard-indicated outcome. The principal differences are: (a) a focus on, and a strong market position in, the participating life insurance business, (b) a governance structure with a strong focus on the best interests of policyholders/creditors, (c) an emphasis on superior customer value with substantial experience-rated policyholder dividends, and a strong capital position that depresses reported profitability metrics.

Insurance financial strength rating

The key factors currently influencing the rating and outlook are:

Market position & brand: Leading positions in a number of markets, now including EB

New York Life has one of the most well-recognized and respected brands in the U.S., and a leading market position in a number of important segments of the industry, with a successful middle market customer focus. According to LIMRA, as of year-end 2020, New York Life was among the largest sellers of life insurance (#3) in the US, including par WL, a product that allows the company to share both favorable and unfavorable investment and insurance experience with policyholders by adjusting the dividend. It is also the #2 provider of fixed annuities and #1 provider of lifetime income annuities, and offers institutional investment products (IIP), including funding agreement-backed notes (FANIPs). IIP sales, however, which grew in 2020, are opportunistic rather than core products. New York Life is also the leading direct marketer of life insurance, a top long-term care insurance provider, and the largest underwriter of professional association insurance programs in the U.S. It also has an established asset management operation through NYLIM, and the Cigna EB acquisition will make the company a top 5 player in group life, group disability and other employee benefits. Accordingly, we view the company's market position and brand to be in line with expectations for Aaa insurers and have moved this factor up from the Aa indicated by the scorecard metric.

Distribution: Wide diversity of distribution channels

New York Life benefits from a diverse network of distribution channels including career agents, independent brokers, banks, direct/sponsored distribution (e.g. AARP), and an institutional sales force. While distribution diversity is consistent with an A rating on an unadjusted basis, it is one of the broadest among mutuals. Nevertheless, New York Life's key strength remains its productive, more than 13,000 member career agency force, which is its primary channel for distributing permanent, cash value life insurance products – the company's core product. The controlled nature of the company's career agency channel contributes to New York Life's strong business retention rates, and its focus on "cultural" market recruitment helps it grow sales from under penetrated ethnic and niche markets (e.g., Latino, Asian, women). The other distribution channels are primarily used to distribute specialized insurance and investment products, such as COLI/BOLI, sponsored life products (AARP and Professional Affinity Organizations), fixed annuities, and investment products, and now, also Cigna's wholesale EB distribution, but these channels afford the company less control over its producers. Career channel sales have been shrinking over time, as other channels' product sales have grown. However, because of the importance of the career force for par WL sales, we view the company's distribution to be in line with expectations for Aa insurers and have moved this factor up from the A, indicated by the scorecard metric.

Product focus and diversification: Risk profile moving further away from low-risk block of participating whole life

New York Life manufactures and markets a wide range of products for both retail and institutional buyers, and maintains a risk profile consistent with Aa peers. The company's principal product lines include individual life insurance, individual annuities (fixed, immediate, and variable annuities-VAs), long-term care insurance, pensions and institutional investment products business, and asset management through its New York Life Investment Management subsidiary. The overall risk profile of the company's product portfolio, which is well positioned among its competitors, is supported by its large block of participating life insurance (about 26% of total year-end 2020 general and separate account liabilities), one of the lowest risk products sold by U.S. firms. We note that New York Life uses a significant percentage of non-par business earnings – now including the Cigna EB earnings - to supplement its dividend to participating whole life policyholders - a trend that may not be sustainable over time, as par WL reserves grow. This could lead to additional business acquisitions, or lower sales and potentially higher lapses if dividends do not keep pace with those of other mutual peers. The Cigna EB acquisition adds incremental product diversity, but also moves NYL incrementally further away from the risk-sharing ability and steady earnings of par WL products. This, and expected higher coronavirus deaths, put pressure on the Aa adjusted score.

Asset quality: Impairments and rating migrations are likely in the current economic environment

The overall quality of New York Life's investment portfolio is good. On an unadjusted basis, the company's GAAP exposure to high risk assets (HRAs) was about 83% of GAAP equity as of December 31, 2020, consistent with Moody's expectations for A-rated companies. On a statutory basis, analytically adjusting for additional below investment-grade middle market bank loans in its Madison Capital subsidiary, the HRA ratio is higher, at about 130%. HRAs include below investment-grade bonds, alternatives, and partnerships, which is at the upper end of the Baa-range score, although many of these are private placements with covenant and/ or collateral protections. On a statutory basis, realized investment losses in 2020 were \$765 million, which is high, however, because investment results of the portfolio backing the participating business can generally be shared with participating policyholders, we have historically raised the

adjusted score on this factor to Aa from A. In its baseline forecast, Moody's [projects](#) the global speculative grade default to fall to 3.4% by March 2022, below the historical average of about 4.2%, after a 6.8% peak in December 2020. We do expect the [uneven economic recovery in 2021](#) to continue to pressure New York Life's high risk investments, resulting in a somewhat higher level impairments and losses and bond rating downgrades, but in line with our expectations.

Capital adequacy: RBC ratio is strong, but lower than peers

New York Life's capital-to-total asset ratio of 11.4% in the scorecard suggests a Aa score, but we believe that the NAIC RBC ratio is a better indicator of the company's capital adequacy. The company's consolidated year-end 2020 NAIC RBC ratio was 452% (company action level), a level indicating strong capital, but lower than some mutual peers (although higher including NY State-required reserves). The quality of capital is good, since the company does not use captive reinsurers, although the Cigna EB acquisition has added material goodwill and intangibles. We expect earnings to improve in 2021, as the vaccinations start to tamp down the pandemic, and sales improve, albeit tempered by a more elevated than normal level of asset impairments, discussed above. However, this should be partially mitigated by New York Life's ability to lower participating policyholder dividends (\$2 billion paid in 2019 and announced for 2020), if need be, bringing the company in line with Aa-rated issuers on an adjusted basis. New York Life issued \$1.25 billion of surplus notes in April 2020, which, although debt, counts as regulatory surplus. Declines in RBC beyond our expectations that are permanent or long-term in nature would put pressure on the capital adequacy score.

Profitability: GAAP and statutory earnings will experience coronavirus pressures in 2021

NYL's GAAP return on capital (ROC), with a 5-year ROC of 4.5%, remains below our expectations for a Aaa-rated company (i.e., aligns with an A sub-factor score), with lower earnings from the pandemic contributing to it in 2020. However, pandemic aside, the low score has been, in part, due to an emphasis on superior policyholder value, which reduces profitability. Under GAAP accounting, these dividends are considered expenses, and thus depress the company's reported ROC, whereas shareholder dividends do not impact ROC for a stock company. ROC on a similar accounting basis would raise the company's ROC more toward the Aa-level, which is the reason we raise the adjusted score to Aa for this factor. We note that NYL's statutory profitability was under pressure during in 2020, with a net loss of \$0.5 billion, given the effects of the coronavirus, including higher mortality (although somewhat offset by reserves), low interest-rate driven reserve increases, and investment and hedging losses. We expect these trends to continue in the first half of 2021, also affecting NYL's new group life and disability income businesses, although returning to more normal levels as vaccinations proceed and sales levels recover during the year.

Liquidity and asset/liability management (ALM): Stable liabilities and strong liquidity

New York Life's unadjusted liquidity score is consistent with a Aa rating – the same as the adjusted score for this factor. However, ALM at New York Life is greatly enhanced by the large amount of very stable participating business on the company's books, which, as noted, effectively allows the company to share some of its inherent risks with its participating policyholders, and also benefits the company's liquidity profile. The company's liquidity profile is further bolstered by a relatively liquid general account investment portfolio and approximately \$18 billion in holdings of cash, short term investments, and U.S. Treasury and agency securities at December 31, 2020. We expect the company's liquidity to show similar strength in 2021. The company has a sizable funding agreement-backed note program, which has rollover and liquidity risk, however, it appears well managed, and exposures are well matched, from both a duration and from a cash perspective - the latter as issues approach maturity. Recognizing the stability of the majority of the company's liabilities, as well as the substantial liquidity available in the investment portfolio, we have left the adjusted score on this factor at Aa, the same as the unadjusted score.

Financial flexibility: Financial leverage is moderate, but has risen significantly with recent issuances

New York Life's adjusted financial leverage and total leverage were 11.0% and 12.7% respectively, as of year-end 2020 up from 10.8% and 12.2%, respectively as of year-end 2019. The company issued \$1 billion surplus notes in 2019, and \$1.25 billion of surplus notes in April 2020. Although leverage is still consistent with a Aaa-rating, these issuances have moved it to the upper end of the leverage scale. An earnings coverage metric of 13.4x over the past five years is consistent with the metrics expected for Aaa-rated companies. As a mutual company, New York Life's lack of ready access to the public equity markets somewhat limits its financial flexibility. As a result, we have lowered this factor score to Aa from the unadjusted score of Aaa.

Exhibit 6

Leverage is moderate but rising; coverage is strong

Sources: Moody's Investors Service and company filings

Liquidity analysis

New York Life's debt consists of four issues of surplus notes, \$990 million, \$991 million, \$983 million and \$1.23 billion, maturing in 2033, 2039, 2069 and 2050, respectively. The latter two, issued in April 2019, and April 2020, respectively, were used to fund the Cigna EB acquisition, as well as for other corporate purposes.

In addition to its own direct debt, New York Life's subsidiary, New York Life Capital Corporation (NYL Capital) issues commercial paper. NYL Capital benefits from explicit support from its parent (albeit only to maintain its tangible net worth at least \$1). Its \$3 billion commercial paper (CP) program is rated Prime-1 (P-1) and the program is available for spread arbitrage opportunities and occasionally used for liquidity management. The average amount of CP outstanding at year-end 2020 was approximately \$495 million. NYL Capital Corp's CP program is backed by a \$1.5 billion five-year bank credit facility which matures in January 2024. The bank facility does not contain a material adverse change (MAC) clause, and the financial covenants in the bank facility are not restrictive and are quite manageable for the company.

Environmental, social and governance considerations**Environmental**

Life insurers typically invest in long-term bonds to match their long-term liabilities and have broadly diversified portfolios that include exposure to sectors affected by environmental risks. However, active portfolio management, including managing credit risks, is a core strength of the industry. Pollution could somewhat affect mortality rates in the long run, but global trends are toward increased environmental regulation and also greater longevity. New York Life's real estate investment strategy includes reducing greenhouse gas emissions and using natural resources where possible. Insurers that underwrite policies only in a limited area (small country or region) could be more affected by natural and man-made disaster risks.

Social

Life Insurers have moderate overall exposure to social risks. These financial institutions are highly regulated and the majority of products are distributed through diverse distribution channels. Given this sector's reliance on handling customer data and privacy, customer relations are important. Human capital risks can be significant, primarily related to the recruitment and retention of key employees. Demographic and societal trends including people living longer and an aging population will affect life insurers in terms of the products that are sold for retirement and estate planning, and the fair pricing of certain life or health risks as insurers manage mortality, longevity, and morbidity risks. Societal trends could also limit the ability of Insurers to share adverse experience through

higher premium rate actions on policyholders of life and long-term care insurance. Digital innovations are disrupting distribution patterns for life insurers ranging from the underwriting process to how life insurance and retirement products are purchased.

Governance

Like all other corporate credits, the credit quality of NYL can be influenced by a wide range of governance-related issues, including aggressive financial or risk policies, inadequate or inexperienced management, complex or opaque organizational structures, weak or corrupt accounting, sales or other policies, and unsuitable board and/or ownership structures. Any weaknesses in any or all of these areas can be exacerbated by regulatory oversight and intervention, which can lead to reputational damage, fines or license suspensions. New York Life strives to promote cultural diversity and encourages recruitment of diverse individuals into its agency force that reflects the different markets the company serves.

Support and structural considerations

The spread between New York Life's Aaa IFS rating and Aa2 surplus notes ratings is two notches, consistent with Moody's typical notching spread for U.S. life insurance operating companies.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING, ASSESSMENT, OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$5,000,000. MCO and Moody's Investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY550,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.
