# National Interagency Coordination Center <br> Incident Management Situation Report <br> Tuesday, May 25, 2021- 0730 MDT <br> National Preparedness Level 2 

National Fire Activity:
Initial attack activity:
Light (157 fires)
New large incidents:
5
Large fires contained: 0
Uncontained large fires: *** 11
Area Command teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 0
Type 2 IMTs committed: 0
Nationally, there are 8 fires being managed under a strategy other than full suppression.
***Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.
Link to Understanding the IMSR.
This report will be posted Monday - Friday at 0730 Mountain time unless significant activity occurs.

Southwest Area (PL 3)
New fires:
New large incidents: 2
Uncontained large fires:
Sycamore Canyon, Papago Agency, BIA. Fifteen miles southeast of Sells, AZ. Grass and brush. Moderate fire behavior with uphill runs, flanking and backing. Structures threatened.

* Boggy Creek, Apache-Sitgreaves NF, USFS. Fifteen miles southwest of Alpine, AZ. Timber and grass. Moderate fire behavior with flanking and creeping.
* McDonald Tank, Fort Apache Agency, BIA. Twenty-five miles southeast of Whiteriver, AZ. Timber, brush and grass. Active fire behavior with running, flanking and backing.

Dog, Guadalupe Mountains NP, NPS. Thirty-four miles southwest of Whites City, NM. Timber and grass. Minimal fire behavior with creeping and smoldering. Structures threatened. Area and trail closures in effect.

Cuervito, Santa Fe NF, USFS. Ten miles east of Pecos, NM. Timber. Active fire behavior with group torching, flanking and backing.

Warsaw, Coronado NF, USFS. Twenty miles northwest of Nogales, AZ. Short grass and brush. No new information. Last report unless new information is received.

Johnson, Gila NF, USFS. Thirty-four miles northeast of Silver City, NM. Timber and grass. Active fire behavior with wind-driven runs, flanking and backing. Structures threatened. Last narrative report unless significant activity occurs.

Predictive Services Discussion: A weak area of low-pressure will move into the Pacific Northwest and Northern Great Basin, with a stronger low moving across the Northern Plains and Upper Mldwest. High pressure will continue to dominate the Eastern states. Showery and cooler weather will continue from the Pacific Northwest across the Northern Great Basin into Western Montana. Warmer and drier conditions will return to much of California, the Southern half of the Great Basin into the Southwest with breezy pre-frontal Southwest-West winds. Holdovers are possible from recent lightning in these areas. Strong West to Northwest winds will occur from Eastern Montana and Wyoming into the Northern Plains with lower relative humidity. A cold front will stretch from the Upper Midwest south into New Mexico and will once again be the focus for scattered showers and thunderstorms from the Great Lakes south across the Central Plains into Texas, with possible severe weather and heavy rain. Warm and dry conditions will continue over the Southeast states, with isolated showers and thunderstorms in the Ohio Valley into the Mid-Atlantic States. Hot and dry conditions will remain in the Southeast States. High pressure will dominate much of Alaska with warm and dry weather early this week. Gusty northerly winds are expected over South-Central Alaska, with humidity dropping below 20\%. Otherwise, just isolated afternoon showers and thunderstorms in Eastern Alaska near the Canadian border.

## ESCAPE ROUTES - Part 3

Operational Engagement Category

A primary objective of every operational fire plan is to keep firefighters out of entrapment situations. However, firefighters must always be prepared to escape quickly to a safety zone or deployment area. Consider the following while discussing escape from possible entrapment.

- Have a plan that includes trigger points.
- Trigger Point: An observable event that triggers a pre-determined action. Example: If the temperature reaches $98{ }^{\circ} \mathrm{F}$ and relative humidity (RH) goes into single digits, the crew will follow the established escape route to the safety zone.
- Reassess escape routes throughout the operational period.
- Does access to escape routes become more difficult as the day progresses?
- Do you have more than one escape route?
- Are all escape routes clearly marked?
- Are all firefighters familiar with the escape routes?
- During an escape, time will be short. Describe considerations in this situation such as:
- Maintain all critical equipment such as personal protective equipment (PPE) and radio. Discard gear that will not aid in your escape.
- Maintain contact with all other crewmembers.

Describe a good safety zone. How is that different from a deployment area?

- You should always know the location of your escape routes leading to safety zones and deployment areas.
