Link to Understanding the IMSR.
One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) has been deployed to Sacramento, CA in support of wildland fire operations. Also supporting this aircraft are four ground controllers from multiple U.S. Air National Guard squadrons.

**Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments. ***Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/

Predictive Services Discussion: An upper low will move into the Pacific Northwest, with broad upper-level troughing over the West and a Pacific cold front stalling across northern California and the northern Great Basin. A closed upper low will slowly drift north into the Mid-Mississippi Valley with upper-level ridging extending northwest from the Mid-Atlantic and Northeast into the Great Lakes. Gusty southerly winds are likely in far eastern Montana, northeast Wyoming, and the western Dakotas ahead of a cold front, with critical conditions likely from northwest South Dakota through western North Dakota. Downslope flow could result in locally elevated conditions in north-central Montana as well. Isolated to scattered showers and thunderstorms are likely across much of the Great Basin into the Rockies, with light showers spreading over portions northern California and the Pacific Northwest. Scattered to widespread showers and thunderstorms will continue over the Southeast into the southern Great Lakes and Mid-Atlantic, with the heaviest rainfall likely near the southern Appalachians.

## Aviation Watch Outs

Aviation Category

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions about every mission.

- Is the flight necessary?
- Who is in charge?
- Are hazards identified and known?
- Have flight hazards been assessed? Have the pilots been informed?
- Should the operation or the flight be stopped due to a change in conditions? Consider the following:
- Radio communications.
- Environmental conditions - weather, visibility, terrain, elevation, temperatures.
- Mission priorities.
- Successful mission completion probabilities.
- Is there a better way to complete the mission?
- Is there pressure to complete a mission at all costs?
- Can you justify your actions?
- Is the mission airspace confined or congested?
- Multiple aircraft.
- Mixed types of aircraft.
- Poor visibility.
- Do you have an escape route?
- Are any guidelines or policies being ignored?
- Is communication between any individuals strained or tense?
- Are you deviating from the assigned operation or flight?
