# Cancer Treatment Program

We recognize cancer as a serious degenerative disease. The Sanoviv Cancer Treatment Program is designed to address the root cause of the disease and provide healing support to your whole body. Our integrative approach uses the best of cutting-edge, science-based therapies and technology, combined with nutrition, supplementation, detoxification and natural medicine . All that we do is intended to add healthy, disease-free years to your life.

Sanoviv can help you understand cancer from a different perspective: one of hope, care and respect – a perspective that includes options that make sense, and one that includes you as a full partner in your healing. Despite the fact that cancer is a serious disease, it can often be overcome. Your team of doctors, nutritionists, specialists, psychologists, biological dentists, chiropractors, imaging technicians, fitness experts and spa therapists are ready for the challenge to help you achieve greater health and healing.

# Introduction to the Program

At Sanoviv, we believe in a balanced approach to cancer therapies. Whenever possible, we use a natural approach to promote healing by supporting the body's own defense systems. Our practitioners draw from the best of alternative, complementary, and conventional therapies, using an integrative, whole-body approach. Many of our natural and biological therapies have their roots in Europe where they have been practiced for many decades.

As a world-class cancer treatment hospital, our most important mission is improving your health. Sanoviv's ongoing scientific research and development contributes to an advanced understanding of each patient's unique prognosis and offers an individualized approach for each patient. Advanced screening techniques, localized therapies and systemic immunotherapies, in addition to the availability of many specifically targeted treatments, has resulted in reductions in cancer mortality and improved outcomes.

Sanoviv is committed to elevate the standard of cancer treatment by providing:

- Highly trained MDs, skilled in Functional Medicine and alternative cancer care
- On-site, staff oncologist who oversees all treatments with a focus on immunotherapy
- An integrative team approach, where multiple disciplines collaborate to select treatment priorities
- On-site surgical center with surgical oncologist
- Continuous cancer research and education for the most up-to-date cancer information
- Evidence-based treatment programs consistent with established guidelines
- Options for genetic assessment, counseling, and palliative care services
- An unparalleled collection of state-of-the-art diagnostics, treatments, and equipment
- Patient-centered psychology services to help with the stress of illness
- Follow up care by phone/email through our Aftercare Department for 1 year following treatment
- High-level, quality care

## What is Immunotherapy?

Immunotherapy refers to any treatment or therapy that works in conjunction with, or supports, the body's own natural immune system. In contrast, some conventional approaches can weaken the body's natural immune defenses. Immunotherapy has been an important component of cancer treatment for decades, but recent advances have shifted immunotherapy to the forefront of oncology. Today, immunotherapy has established itself as a critical pillar in cancer therapy. It has resulted in long-lasting, positive clinical responses in patients whose tumors were resistant to conventional anti-cancer therapies. Nonetheless, additional research is required to further optimize the existing immunotherapeutic approaches and also to assess new strategies in this emerging field with significant untapped potential.

Cancer immunotherapy has made great strides in improving clinical outcomes for some patients, and there is great hope that continued research efforts will enable even more patients to benefit in the future. Often, the tumor microenvironment produces immunosuppressive effects and induces a state of low oxygen concentration. Immunotherapies work directly to change this negative environment.

# Laboratory Testing

- \* Complete Blood Count
- \* Blood Chemistry
- \* hs-CRP
- \* Ferritin
- \* Urine Analysis
- \* Immune Panel
- \* Tumor Markers
- \* Hemoglobin A1C
- \* Stool Analysis
- \* Sedimentation Rate
- \* Vitamin D
- \* Blood Type

## Other Diagnostic Tests

- \* Imaging (ultrasound, chest x-ray, CT scan)
- \* Bioenergetic Assessments
- \* EKG

*Some laboratory tests are repeated twice during the program.*

*If additional tests are indicated, you will be informed whether they are included in your program or would incur additional cost.*

## Professional Consultations

### Medical Consultations

- \* Admission Consultation
- \* Clinical History
- \* Daily weekday doctor appointments (3x/week with oncologist, 2x/week with assigned doctor)
- \* Laboratory and Tests review
- \* Homeopathic Consultation
- \* Discharge Consultation
- \* Specialist Consultations

### Biological Dentistry

- \* Initial Assessment and
- \* Explanation of Results
- \* Neural Therapy

### Chiropractic

- \* Initial Assessment

\*

### Psychology

- \* Initial Assessment
- \* Psychological Sessions
- \* Mind-Body Therapies

### Nutrition

- \* Initial Assessment
- \* Bio Impedance Analysis (BIA)
- \* Nutrition Consultations
- \* Metabolic Typing (*if indicated*)
- \* Dietary Home Program

### Fitness

- \* Initial Assessment (*if indicated*)
- \* Individual Sessions (*as needed*)

### Aftercare

- \* Follow-up Contact and Appointments

# Medical Treatments and Therapies

Your individual treatment plan may include any of the following, as recommended by your medical team:

- \* IV Vitamin C (non-corn)
- \* IV Chelation (EDTA)
- \* IV Amygdalin (B-17)
- \* T-Cell Modulation Therapy (TCM) - up to 10 spray bottles or 80 lyophilized pouches for home program
- \* Dendritic Cell Therapy or Specific Antigen Therapy (includes simple biopsy, if needed)
- \* IV High-Dose Nutrition (if indicated by doctor)
- \* Bioenergetic Treatments (Proscope, Rife, Ondamed, and more)
- \* Enzyme Therapy
- \* Carzilase<sup>®</sup> Thiamin (Vitamin B1) IV therapy
- \* Hyperbaric Oxygen Therapy or Ozone Therapy
- \* Regional & Whole Body Hyperthermia (without sedation)
- \* Colon Hydrotherapy
- \* Subclavian Catheter Placement (If indicated by doctor)
- \* Included Nutritional Supplements

## Classes (please check schedule for availability)

- |                                |   |
|--------------------------------|---|
| * Digestion & Detoxification   | * Meditation                              |
| * Nutrition & Food Preparation | * Fitness <i>(if indicated by doctor)</i> |
| * Energy Medicine              | Stretching/Gentle Yoga                    |
| * Dental Health                | Swiss Ball Exercise                       |
| * Breathing and Relaxation     | Water Fitness                             |
|                                | Rebounding                                |

## Medical Spa (2 per week or as indicated by physician)

Spa treatments may include any of the following as recommended by your medical team:

- |                           |                             |
|---------------------------|-----------------------------|
| * Swedish Massage         | * MRT and Parafango         |
| * Lymphatic Massage       | * Seaweed Body Wrap         |
| * Reflexology Massage     | * Fango Body Wrap           |
| * Craniosacral Therapy    | * Thallasotherapy Treatment |
| * Parafango Back and Neck | * Guided Infrared Sauna     |

# Anti-Cancer Therapies

We use many different therapeutic interventions to enhance your body's ability to destroy cancer cells, while respecting the integrity of normal, healthy cells. Our goal is to slow or stop the progression of the disease, while improving quality and length of life. Treatments are designed to change the tumor micro environment to not only impact the visible cancer, but to also address the Cancer Stem Cells and Circulating Tumor Cells that can lead to recurrences or metastasis of the cancer. These interventions are done in conjunction with supportive therapies to enhance their potency while diminishing side effects. Specific protocols are used to administer the correct treatment at the right dose, at the exact time and frequency to produce the best possible results. Below are examples of immunotherapies that may be used as part of your cancer treatments.

## Hyperthermia

Both Regional and Whole-Body hyperthermia may be used in cancer treatment. Regional hyperthermia is used to heat up tumor material in a localized area, causing its metabolism to break down. The structure and metabolism of tumor cells is different than that of healthy cells. Tumors are not able to easily disperse heat, so they tend to retain heat which weakens the tumor. Whole body hyperthermia may also be used to promote detoxification and stimulate the immune system. These therapies are often used in combination with other modalities to enhance their effectiveness.

## Oxygen Therapy

Hyperbaric Oxygen Therapy (HBOT) and Ozone Therapy are used to improve oxygen delivery to all tissues, improve healing, and improve the micro environment in the affected areas.

## T Cell Modulator Therapy ( TCM)

The generation of tumor-specific T-cells is a multistep, stochastic process. Not only must tumor cells express proteins that can be recognized as foreign, but these proteins must also be processed and presented to T Cells in order to mount a specific anti-tumor response. This specific peptide induces an increased response and production of specific T-lymphocytes for cancer control, it acts on Toll Like Receptors ( TLR) on lymphocytes to increase lymphocyte function.

## Dendritic Cell Therapy

Dendritic cells are professional antigen presenting cells frequently used in immunotherapy protocols because they are key cells to activate the adaptive immune response. To induce anti-tumor responses, Dendritic Cells must be loaded with tumor antigens. For this therapy, the dominant antigens obtained from a blood sample or biopsy, are coupled with dendritic cells to stimulate the presentation of these antigen to our effector T-cells and generate an adequate adaptive immune response, with minimal side effects. (If biopsy is needed, it would be additional cost.)

## Specific Antigen Therapy

It is a directed personalized immunotherapy in which a biopsy or fragment of the primary tumor is analyzed by our immunolab and the specific or dominant antigens that cancer cells express are extracted and coupled with a TCM peptide. This combined molecule is prepared and administered during an 11 month period. The effective and therapeutic benefit of this molecule is to activate a specific response to the antigens cancer cells are expressing. (Biopsy not included.)

## Bioenergetic Treatments

The body is both chemical and electrical. But many ignore the electrical or energy element that keeps our heart beating, our nerves communicating, and helps in so many other ways. If this energy is blocked or compromised, our bodies do not work correctly. At Sanoviv, we believe that bioenergetic diagnostics and treatments play a fundamental role in healthcare of the 21st century. Various types of state-of-the-art equipment use micro-currents, magnets, or light frequencies to support and change these electrical or energetic pathways. Our doctors work closely with the bioenergetic staff to decide which treatments might have the most impact on your healing by balancing the body so it is more receptive to receiving all of the other treatments at Sanoviv.

*"In every culture and in every medical tradition before ours, healing was accomplished by moving energy"*

*--Albert Szent-Györgyi*

## Nutritional Therapy

The Sanoviv diet is a whole foods program that eliminates the most common food allergens (wheat, dairy, soy, corn), as well as processed sugars, toxic fats, food additives, and preservatives, caffeine and alcohol. Our plant-based diet is mostly organic and includes an abundance of both raw and lightly-cooked vegetables, green juices, sprouted legumes, nuts and nut milks, seeds and some gluten-free grains. Our diet also includes a small amount of animal protein from "wild caught" fish, and organic, humanely-raised poultry and eggs.

Adequate nutrition is an integral part of cancer treatment as it nourishes the body, reduces inflammation, enhances immune function, balances blood sugar, supports good digestion and aids in your body's detoxification. Our diet favors alkaline foods and is low in carbohydrates and sugars.

There can be controversy about the right diet for cancer, whether this is an all raw or vegetarian diet, or something else. At Sanoviv we firmly believe in the biochemical individuality of each guest. Just as there is not one type of cancer, there is not just one therapeutic nutrition plan for every cancer patient. We seek to find how your body responds uniquely to food, taking into consideration your genetics, family history/ancestral background, and your interaction with your environment.

# Psychology

The Sanoviv psychology department helps you address the mental and emotional components of health. Let's face it, it's stressful being sick. Appointments in this department can help you learn to release negative emotions and embrace healing thoughts and attitudes. We align these with tools designed to support your healing from cancer, including healthy expression of emotions, healing imagery, NET (Neuro Emotional Technique), Brain Spotting, Mind-Body Therapies, Family Constellation Therapy, relaxation, meditation, and more.

## The Mind-Body Connection and Health

Studies have shown that when a person's mental, emotional, and physical components are in balance, the individual moves into a more relaxed state which promotes healing. In addition, chronic or trapped emotions can lead to disease and also block healing responses. When this happens, we experience higher levels of stress. Stress can block healing responses in the body and make healing more difficult to occur, as your body will be focused on surviving, not thriving. Mind-Body Therapies help to address these emotions and promote balance and relaxation.

We use the most comprehensive and effective treatment protocols to help you find the right balance in your thoughts, feelings and behaviors. Our goal is to help you achieve the necessary lifestyle changes to support your healing journey. Meditation, individual counseling, educational classes, mind-body therapies, energy medicine, laughter therapy, relaxation practices and yoga are among the tools that we use to achieve this. We also have special activities for the care-givers of cancer patients to help support their needs during the program.

## Fitness

Our bodies are designed for motion, which activates key factors of health. When dealing with a serious and sometimes debilitating disease like cancer, some may feel that exercise and movement are not a top priority. However, there is overwhelming evidence that shows the benefits of balanced fitness activity in cancer treatment and prevention. Some studies show that exercise is a great tool for improving fatigue symptoms, general quality of life, and physical functioning in those dealing with cancer.

Research suggests that through exercise, breast cancer patients can reduce their mortality rate, whether or not the cancer was diagnosed early or after it had already spread. One study suggests that men who do strength training are between 30 to 40% less likely to lose their life to a deadly tumor. Thus, fitness training is a supportive tool in cancer prevention and treatment. One of the main beneficial effects that exercise has in cancer prevention and treatment is lowering insulin levels in the body. Impaired insulin function and blood sugar can play a major role in the onset of cancer.

Our fitness department focuses on using movement and fitness as an effective aid in your recovery. Our fitness instructors work closely with doctors, nutritionists and chiropractors to develop a specific plan for your individual needs. With this collaboration, we ensure that you are receiving all the benefits of movement, without exceeding your individual capacity or risking injury.

# Detoxification

Detoxification involves removal of harmful substances from our body, which is continually confronted with toxins, and optimizing the function of our detoxification systems. Toxins are found in the air we breathe, in the food we eat, in the water we drink, in our clothes, furniture, and even in our mouths as dental toxins. In order to optimize the immune response and reduce side effects of treatment, the body needs to be free of heavy metals and toxins. At Sanoviv, you are in a low-toxin environment in order to optimize healing. A detox regimen including 8 pathways of detoxification may be used to help the body rid itself of toxins and improve metabolic function. Spa treatments and bioenergetic detox treatments can help the body be more receptive to therapies.

## Additional Details

There are a specific number of diagnostics, therapies and treatments included in this program. Your medical team will select which therapies and tests are most appropriate for you. Within the framework of the program, they may also adjust the number and duration of treatments based on your individual health assessment. If additional tests, treatments or services are needed that are not included, you will be consulted before anything is ordered.

Examples of services that may incur an additional fee include:

- \* Specialized tests and scans (MRI, PET, etc.)
- \* Virotherapy
- \* Surgical Procedures
- \* Diagnostic Tests that are not included
- \* Low dose chemotherapy or radiotherapy
- \* Emergency Services
- \* Dental treatments / oral surgery
- \* External Specialist Consultations

The program is sold as a package. All of our programs include room and board for the guest. We encourage cancer patients to bring a companion with them for physical and emotional support. The cost for a companion is only \$100 dollars per night (occupying the same room), which includes meals, juices, use of our salt-water therapeutic pools and group classes. Companions may purchase spa treatments or other supplemental services based upon availability.

Some oral supplements and medications are included. Examples include enzymes, probiotics, and nutritional support. For those supplements or medications not included in the program, our accounting department will alert you and any further medications and supplements will need to be paid in advance.

At the conclusion of your program, your doctor will recommend a “home program” to follow after you depart, which could include supplements, medications, or other treatments. The cost for following these home recommendations is not included in the program.
