# National Interagency Coordination Center Incident Management Situation Report <br> Monday, July 4, 2022 - 0730 MDT <br> National Preparedness Level 2 

National Fire Activity:
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: **
Light (153 fires)
4

Area Command teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 1
Type 2 IMTs committed: 6
***Complex IMTs committed: 0
***Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 68 fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.

## Alaska Area (PL 5)

| New fires: | 5 |
| :--- | :--- |
| New large incidents: | 2 |
| Uncontained large fires: | 0 |
| Type 1 IMTs committed: | 1 |
| Type 2 IMTs committed: | 4 |

Clear, Fairbanks Area, Alaska DOF. IMT 2 (NW Team 10). Ten miles northwest of Anderson, AK. Timber and short grass. Active fire behavior with spotting, torching and group torching. Numerous residences threatened. Evacuations in effect.

Minto Lakes, Fairbanks Area, Alaska DOF. Transfer of command from IMT 2 (NR Team 3) to IMT 1 (CA Team 1) will occur today. Nineteen miles north of Whittier, AK. Timber and hardwood litter. Active fire behavior with group torching, uphill runs and flanking. Residences threatened. Area, road and trail closures in effect.

Lime Complex (14 fires), Southwest Area, Alaska DOF. IMT 2 (AK Green Team). Fifty miles east of Chuathbaluk, AK. Grass, timber and brush. Active fire behavior with flanking, running and torching. Numerous structures, communication and energy infrastructure threatened.

Bean Complex (6 fires), Tanana Zone, BLM. IMT 2 (NW Team 7). Started on state land 100 miles west of Fairbanks, AK. Timber and short grass. Active fire behavior with backing, torching and spotting. Structures threatened.

* Middle Tanana Complex, Delta Area, Alaska DOF. Thirty-two miles northeast of Delta Junction, AK. Timber. Extreme fire behavior. Last narrative report unless significant activity occurs.
* Waterfall, Upper Yukon Zone, BLM. Started on Native Corporation land 37 miles north of Eagle, AK. Timber and short grass. Active fire behavior. Last narrative report unless significant activity occurs.

Dalton Highway Complex (4 fires), Tanana Zone, BLM. Previously reported incident. Twenty-five miles south of Coldfoot, AK. Timber and short grass. Active fire behavior with running, backing and spotting. Structures and energy infrastructure threatened. Last narrative report unless significant activity occurs.

Poorman Complex (3 fires), Galena Zone, BLM. Thirty-eight miles southeast of Ruby, AK. Timber. Active fire behavior with flanking and backing. Structures threatened. Last narrative report unless significant activity occurs.

Snohomish, Tanana Zone, BLM. Started on state land 15 miles southwest of Lake Minchumina, AK. Timber and tall grass. Active fire behavior. Last narrative report unless significant activity occurs.

Goose, Upper Yukon Zone, BLM. Started on FWS land 42 miles northwest of Chalkyitsik, AK. Timber, tall grass and brush. Active fire behavior with torching. Last narrative report unless significant activity occurs.

Predictive Services Discussion: Scattered thunderstorms will cotinue in much of the Alaskan Interior onto the North Slope and into southeast Alaska, with hot and dry conditions over eastern portions of the state. Widespread smoke from the Interior into southwest Alaska and the North Slope will remain. Elevated to critical conditions will spread across southern and eastern Nevada into much of Utah. Monsoonal thunderstorms will continue over eastern Arizona, New Mexico, and much of the Colorado Rockies. Isolated to scattered thunderstorms are likely in portions of the Inland Pacific Northwest, over the Northern Rockies, and through the northern Plains and Great Lakes, with strong to severe storms likely from the Continental Divide to the Great Lakes. Thunderstorms will continue across much of the Southeast.

Today's topic is dedicated to all firefighters injured or killed in felling accidents.
On July 25, 2008, a radio transmission came into Iron Complex dispatch: "Man down, man down. We need help. Medical emergency. Dozer pad. Broken leg. Bleeding. Drop Point 72 and dozer line. Call 911, we need help." While his engine crew was dropping a hazard tree, a large section of a nearby tree fell and struck firefighter Andy Palmer, shattering his femur, and severing large blood vessels. For a variety of reasons (detailed in the report), medevac of the seriously injured firefighter experienced multiple delays. Three hours and twenty-six minutes after the accident, an ER physician pronounced time of death, via radio. The coroner later determined that Palmer's death was caused by excessive blood loss. The eighteen-year-old was on his first fire assignment.

The subsequent Dutch Creek Tree Felling Fatality (2008) Serious Accident Investigation and associated Safety Action Plan and recommendations (https://www.wildfirelessons.net/orphans/viewincident? DocumentKey=b0d402d2-b15d-435c-bd26-4aa823b7efef) set the stage for foundational changes to fire responses, especially in remote settings. These documents, from the Lessons Learned Center, gave us incident within an incident (IWI) plans and the Medical Incident Report, part of the Medical Plan (ICS 206 WF).

There have only been a handful incidents that have fundamentally changed the world of wildland fire management for the better. The Dutch Creek incident is one of them. The lessons and new protocols from Dutch Creek have given fire managers tools to proactively plan for the eventuality of an injury. Ask yourself these questions:

- What will we do if someone gets hurt?
- How will we get them out of there?
- How long will it take to get them to a hospital (or advanced level of care)?

At Rocky Mountain National Park (RMNP), these tools and concepts were put to the test and saved a life on the 2012 Big Meadows Fire. Six miles into the backcountry, a hotshot crew member collapsed with sudden cardiac arrest. Because of medical emergency planning for the backcountry, a paramedic was on site and equipped with an automated external defibrillator (AED). The crew member was resuscitated and is alive today as a direct result of lessons learned from the Dutch Creek incident.

Today, fire crews at RMNP keep the lessons learned from the Dutch Creek incident alive in numerous ways. These lessons learned are no longer something we have to do but have become what we do. Prior to engaging a fire, or even project work, we plan for medical emergencies through in-depth discussions and during briefings. If the questions above cannot be answered or the answers are inadequate, we strive to generate proactive solutions or alternate strategies and tactics to manage the risk. We encourage people to speak up if they are uncomfortable so that we can initiate strong dialogue at all levels regarding risk and the proper way to refuse it.

Since embracing the lessons learned from Dutch Creek, crews practice more awareness of the medical resources that are available, as well as their capabilities and equipment. EMTs and crew members train for initial patient care with advanced bleed control supplies which are added to the medical kits. Patient packaging and transport training are conducted, using multiple styles of wheeled litters and extraction training using a Traverse Rescue Stretcher. Planning for an IWI has become engrained and standard but also a continual learning process.

## Andy Palmer - Never Forgotten
