

Merit Badge Workbook

This workbook can help you but you still need to read the merit badge pamphlet.

This Workbook can help you organize your thoughts as you prepare to meet with your merit badge counselor. You still must satisfy your counselor that you can demonstrate each skill and have learned the information. You should use the work space provided for each requirement to keep track of which requirements have been completed, and to make notes for discussing the item with your counselor, not for providing full and complete answers.

If a requirement says that you must take an action using words such as "discuss", "show", tell", "explain", "demonstrate", "identify", etc, that is what you must do.

Merit Badge Counselors may not require the use of this or any similar workbooks.

No one may add or subtract from the official requirements found in Scouts BSA Requirements (Pub. 33216 – SKU 653801). The requirements were last issued or revised in 2020 • This workbook was updated in June 2020.

3. Do	ONI	E activity in sever	n of the following categories (using the activities in this pamphlet as the bases for planning and s):
c a.		ology	
С	1.	Conduct and ex	experiment to find out how living things respond to changes in their environments. Discuss your
		observations wi	ith your counselor.
С	2.	Conduct an exp your conclusion	periment illustrating the greenhouse effect. Keep a journal of your data and observations. Discuss as with your counselor.
С	3.	Discuss what is	an ecosystem. Tell how it is maintained in nature and how it survives.

 b. Air Pollution 1. Perform an experiment to test for particulates that contribute to air pollution. Discuss your findings with your counselor. 2. Record the trips taken, mileage, and fuel consumption of a family car for seven days, and calculate how many miles per gallon the car gets. Determine whether any trips could have been combined ("chained") rather than taken out and back. Using the idea of trip chaining, determine how many miles and gallons of gas could have been saved in those seven days. 3. Explain what is acid rain. In your explanation, tell how it affects plants and the environment and the steps society can take to help reduce its effects. c. Water Pollution 1. Conduct an experiment to show how living things react to thermal pollution. Discuss your observations with your counselor. 2. Conduct an experiment to identify the methods that could be used to mediate (reduce) the effects of an oil spill on waterfowl. Discuss your results with your counselor. 3. Describe the impact of a waterborne pollutant on an aquatic community. Write a 100-word report on how that pollutant affected aquatic life, what the effect was, and whether the effect is linked to biomagnification.

d.	Lan	d Pollution
С	1.	Conduct an experiment to illustrate soil erosion by water. Take photographs or make a drawing of the soil before and after your experiment, and make a poster showing your results. Present your poster to your patrol or troop. (Per National, "troop" means "unit".)
С	2.	Perform an experiment to determine the effect of an oil spill on land. Discuss your conclusions with your counselor.
С	3.	Photograph an area affected by erosion. Share your photographs with your counselor and discuss why the area has eroded and what might be done to help alleviate the erosion.
e.	End	langered Species
С	1.	Do research on one endangered species found in your state. Find out what its natural habitat is, why it is endangered, what is being done to preserve it, and how many individual organisms are left in the wild. Prepare a 100-word report about the organism, including a drawing. Present your report to your patrol or troop.
С	2.	Do research on one species that was endangered, or threatened, but which has now recovered. Find out how the organism recovered, and what its new status is. Write a 100-word report on the species and discuss it with your counselor.
C	3.	With your parent's and counselor's approval, work with a natural resource professional to identify two projects that have been approved to improve the habitat for a threatened or endangered species in your area. Visit the site of one of these projects and report on what you saw.

С	f.	Po	Illution Prevention, Resource Recovery, and Conservation
	С	1.	Look around your home and determine 10 ways your family can help reduce pollution. Practice at least two of these methods for seven days and discuss with your counselor what you have learned.
	С	2.	Determine 10 ways to conserve resources or use resources more efficiently in your home, at school, or at camp. Practice at least two of these methods for seven days and discuss with your counselor what you have learned.
	С	3.	Perform an experiment on packaging materials to find out which ones are biodegradable. Discuss your conclusions with your counselor.
С	g.		Illination
	С	1.	Using photographs or illustrations, point out the differences between a drone and a worker bee. Discuss the stages of bee development (eggs, larvae, pupae). Explain the pollination process, and what propolis is and how it is used by honey bees. Tell how bees make honey and beeswax, and how both are harvested. Explain the part played in the life of the hive by the queen, the drones, and the workers.

		efore you choose requirement 3g(3), you will need to first find out whether you are allergic to bee
	ch yo sv st	tings. Visit an allergist or your family physician to find out. If you are allergic to bee stings, you should hoose another option within requirement 3. In completing requirement 3g(3), your counselor can help ou find an established beekeeper to meet with you and your buddy. Ask whether you can help hive a warm or divide a colony of honey bees. Before your visit, be sure your buddy is not allergic to bee tings. For help with locating a beekeeper in your state, visit www.beeculture.com and click on "esources," then select "Find Help" and "Find a Local Beekeeper."
		Hive a swarm OR divide at least one colony of honey bees. Explain how a hive is constructed
