

The Johns Hopkins Women's Center for Pelvic Health

Bladder Irritants

Certain foods and drinks have been associated with worsening symptoms of urinary frequency, urgency, urge incontinence, or bladder pain. If you suffer from any of these conditions, you may wish to try eliminating one or more of these foods from your diet and see if your symptoms improve. If bladder symptoms are related to dietary factors, strict adherence to a diet that eliminates the food should bring marked relief in 10 days. Once you are feeling better, you can begin to add foods back into your diet, one at a time. If symptoms return, you will be able to identify the irritant. As you add foods back to your diet it is very important that you **drink significant amounts of water.**

List of Common Bladder Irritants*

Alcoholic beverages

Apples and apple juice

Cantaloupe

Carbonated beverages

Chili and spicy foods

Chocolate

Citrus fruit

Coffee (including decaffeinated)

Cranberries and cranberry juice

Grapes

Guava

Vinegar

*Most people are not sensitive to ALL of these products; your goal is to find the foods that make YOUR symptoms worse

Low-acid fruit substitutions include apricots, papaya, pears and watermelon. Coffee drinkers can drink Kava or other low-acid instant drinks. Tea drinkers can substitute non-citrus herbal and sun brewed teas. Calcium carbonate co-buffered with calcium ascorbate can be substituted for Vitamin C. Prelief is a dietary supplement that works as an acid blocker for the bladder.
