Inspection / Report limitations

This report is the exclusive property of Your company name here and the client whose name appears herewith, and its use by any unauthorized persons is strictly prohibited. The observations and opinions expressed within this report are those of Your company name here and supersede any alleged verbal comments. We inspect all of the systems, components, and conditions described in accordance with home inspector's standards of practice. This report is not intended for third party dissemination. This report shall not be forwarded to any other person, company, or legal entity without Your company name here express written approval. Your company name here copyrights this report, which is protected by copyright law.

We are proud of our service and trust you will be happy with the quality of our inspection and report. Please contact us with any concerns you may have regarding the report. We will be glad to discuss them with you.

It is ultimately your decision on what concerns you would like corrected. Keep in mind that if you do not get them corrected now the defects will have to be corrected in the future at your expense. It is not possible to detect every concern during a general visual inspection. Things are going to happen and this inspection in no way is a warranty or guarantee as to the condition of the property. Make sure to complete a final walk through of the property before the close of escrow.

We are always interested in advancing the quality of our service and our report. We welcome and value your input. We adhere to a high standard of professionalism and treat everyone with the utmost courtesy and respect.

This report is to inform you of current condition as observed at time of inspection. As a general rule cosmetic deficiencies are considered normal wear and tear and are not within the scope of this inspection unless they constitute major and visually observable defects as defined in the Inspection Agreement. However some items, which may be considered cosmetic in nature, may have been noted to assist you in evaluating other issues covered in the Inspection Agreement.

This inspection does not include testing for radon, mold, termites and other wood destroying organisms, pests and rodents or other hazardous materials unless specifically requested.

Your company name here report is prepared exclusively for customer. The report is not intended for third party dissemination. This report shall not be forwarded to any other person, company, or legal entity without Your company name here express written approval. Your company name here copyrights this report, which is protected by copyright law.

Report Summary

This Report Summary will describe area(s) of concern that were observed at time of inspection by this inspector that may need some type of repair, replacement, service or further review. Keep in mind that all homes need some type of repair, even if only minor and generally older homes well need more repairs. All safety concerns mentioned within this report should be reviewed and repaired prior to occupancy. While every effort is made to identify existing and potential problems at the time of the inspection, it is not possible for a home inspector to foresee all problems that might arise in the future. This Report Summary is provided as a courtesy and cannot be considered a substitute for reading the entire report.

This Home Inspection Field Report is confidential and has been produced in accordance with our signed contract agreement and is subject to the terms and conditions agreed upon therein

Grounds

Our inspection of the Grounds area(s) in accordance with industry standards of practice are inspected visually for positive grading and drainage that are essential to the welfare of a property and does not attempt to determine the condition of any underground piping, including municipal water, sewer service piping or septic systems. Also inspected are the trees and shrubbery that can cause foundation and or roof damage when growing too closely to the structure. While driveways and sidewalks of a residence may be dirt, gravel or paved with a hard, solid surface, such as concrete or asphalt. Some cracking in driveways and walkways can be expected; however, they should not cause a tripping hazard, erosion or in any way negatively impact the house. This report is to inform you of current condition as observed at time of inspection.

Structural Components / Foundation / Sub Areas

Our inspection of the Structural Components / Foundation / Sub Areas in accordance with industry standards of practice, that includes the visually accessible areas of carports, patio covers, awnings, decks, walls, flooring, ceilings, fascia, trim, soffits, balconies, doors, windows, basement and stairways. We visually inspect the foundation and look for any evidence of structural deficiencies, while foundation type and material of construction may defer such as concrete, masonry block, brick, stone and or wood foundation, they can experience some degree of cracking due to stress, settlement, shrinkage and various temperature change. We will not inspect any detached structures unless contracted to do so. This inspection does not include the geological conditions of the property, such as soil expansion or soil compaction. This inspector is not required to enter any area or perform any procedure that may damage the property or its components or be dangerous to or adversely affect the health of the home inspector or other persons. This inspector will not enter crawlspaces or any areas where headroom clearance is less than 18 inches and the width of the access opening is less than 18 inches by 24 inches or where inspector reasonably determines conditions or materials are hazardous to his health or safety. This report is to inform you of current condition as observed at time of inspection.

Safety Hazard

Color of boxes below will indicate the level of concern for each area at time of inspection

Roof and Attic

Our inspection of the Roof and Attic area(s) in accordance with industry standards of practice includes a visual observation of the roof covering, gutters, downspouts, vents, flashings, chimney, skylight and other roof penetrations within the limits of accessibility. The inspector may walk the surface of a roof in order to inspect it and its components but may inspect it by other means if the roof cannot be safely accessed, due to its height, weather conditions, or if the roofing material could be damaged by foot traffic. The inspector is not required to, predict the service life expectancy or inspect underground downspout diverter pipes, remove snow ice or debris, or inspect antennae, lighting arrestors or similar attachments. All roofing types require some type of annual maintenance (some types more frequent than others). Failure to perform routine maintenance can result in leaks and accelerate roof covering and flashings deterioration. An inspector cannot guarantee a roof is leak free, only observation during a prolonged rainfall can determine this. This report is to inform you of current condition as observed at time of inspection. We do not attempt to enter attics that have less than thirty-six inches of headroom, are restricted by ducts, or in which the insulation obscures the joists and thereby makes mobility hazardous, in which case we would inspect them as best as we can from the access point. In regard to evaluating the type and amount of insulation on the attic floor, we use only generic terms and approximate measurements, and do not sample or test the material for specific identification. Also, we do not disturb or move any portion of it, and it may well obscure water pipes, electrical conduits, junction boxes, exhaust fans, and other components.

Fireplace(s) / Chimney(s)

Our inspection of the Fireplace/Chimney area(s) in accordance with industry standards of practice includes a visual observation of all accessible components. While there are three basic types of chimney's, single-walled metal, masonry, and pre-fabricated metal also referred to as factory-built ones. Masonry and factory-built ones are a commonplace in residential homes. Our inspection of them conforms to industry standards, and is that of a generalist and not a specialist. While some areas of the chimney flue cannot be adequately viewed during a home inspection and does not include the use of specialized equipment, we will not guarantee their integrity or drafting ability and recommend that they be more thoroughly evaluated before the close of escrow. We will not move furniture, lift carpets or rugs. This report is to inform you of current condition as observed at time of inspection.

Bathroom(s)

Our inspection of the Bathroom area(s) in accordance with industry standards of practice includes a visual examination of the readily accessible areas of the walls, floor, ceiling, cabinets, countertops and plumbing fixtures. The plumbing system and their components are tested and observed using normal operating controls, which includes flushing toilet(s), testing functional flow and observance of any active leakage throughout fixture(s) and faucet(s). Exhaust vent fans and their ductwork are tested for their proper operation. Shower pans/Tubs are visually checked for possible leakage concerns, but leaks often do not show except when the shower/tub is in actual use. Determining whether shower pans, tub/shower surrounds are watertight is beyond the scope of this inspection. It is very important to maintain all grout, caulking and other sealants used in the bathroom areas. Very minor imperfections can allow water intrusion into the walls or floor areas and cause damage. We will not attempt to move furniture, lift carpets or rugs, empty closets or cabinets. This report is to inform you of current condition as observed at time of inspection.

Kitchen Appliances

We perform a visual and brief operational inspection of built-in appliances listed within this report. This inspector will not operate: Any system that is shut down, any system that does not function properly, any system that does not turn on with the use of normal operating controls, any gas appliance that requires the use of a match or other remote burner lighting device, or determine leakage from microwave ovens, Inspector will not move any personal items or other obstructions, Inspector will not dismantle, open, or uncover any system or component or enter or access any area which may, in the opinion of the inspector, be unsafe or where damage might occur. The following items are excluded from this report; Portable appliances, appliances timers & thermostats, water filtration devices, icemakers, instant hot water makers, clothes washer & dryer operation, appliances that are concealed. While kitchen appliances are subject to unpredictable life expectancy and may require repair or replacement even though functional at time of inspection, NO warranty is expressed or implied. Clients are advised to purchase a home protection plan because appliances, including new appliances, can fail at any time, including immediately after the inspection. Older appliances five years or older of course, are more prone to failure. While every effort was made by this inspector to find all areas of concern, some areas can go unnoticed. Any repair items mentioned within this report should be considered before purchase. It is recommended that qualified contractors be used in your further inspection needed or repair issues as it relates to the comments within this inspection report.

Heating and Cooling

The components of most heating and air-conditioning systems have a design-life ranging from ten to twenty years, but can fail prematurely with poor maintenance, which is why we apprise you of their age whenever possible. We test and evaluate them in accordance with the standards of practice, which means that we do not dismantle and inspect the concealed portions of evaporator and condensing coils, the heat exchanger, which is also known as the firebox, electronic air-cleaners, humidifiers, ducts and in-line duct-motors or dampers. We perform a conscientious evaluation of both systems, but we are not specialists. However, even the most modern heating systems can produce carbon monoxide, which in a sealed or poorly ventilated room can result in sickness, debilitating injury, and even death. Therefore, in accordance with the terms of our contract, it is essential that any recommendations that we make for service or a second opinion be scheduled before the close of escrow, because a specialist could reveal additional defects or recommend further upgrades that could affect your evaluation of the property, and our service does not include any form of warranty or guarantee.

Water Heating System(s)

There are a wide variety of residential water heaters systems that range in capacity from fifteen to one hundred gallons. They can be expected to last at least as long as their warranty, or from five to eight years, but they will generally last longer. However, few of them last longer than fifteen or twenty years and many eventually leak. So it is always a good idea to have them installed over a drain pan plumbed to the exterior. Also, it is very important to flush them annually to remove loose sediment that includes the calcium chloride bi-products of many water softening systems. The water temperature should be set at a minimum range of 110 degrees Fahrenheit to kill microbes and a maximum of 140 degrees to prevent scalding. Also, water heaters can be dangerous if they are not seismically secured and equipped with either a pressure/temperature relief valve and discharge pipe plumbed to the exterior, or a Watts 210 gas shut-off valve. Therefore, in accordance with the terms of our contract, it is essential that any recommendations that we make for service or a second opinion be scheduled before the close of escrow, because a specialist could reveal additional defects or recommend further upgrades that could affect your evaluation of the property, and our service does not include any form of warranty or guarantee.

General Description

Water Heating System #1

General Observation

Inspected

Satisfactory

Brand: Bradford-White

Year Model:

Model #:

Serial #:

Type of system: Gas demand water heater

Fuel type: Natural Gas

Tank capacity: 40 gallon

Location: Garage

Ventilation type: Aluminum flue ventilation

Further Comments

No concerns observed

General Description

Water Heating System #2

General Observation

Inspected

Satisfactory

Brand: Bradford-White

Year Model:

Model #:

Serial #:

Type of system: Gas demand water heater

Fuel type: Natural Gas

Tank capacity: 40 gallon

Location: Garage

Ventilation type: Aluminum flue ventilation

Further Comments

No concerns noted

General Description

Water Heating System #3

General Observation

Inspected

Satisfactory

Pool / Spa

Our inspection of the Pool / Spa area(s) in accordance with industry standards of practice includes the visually accessible areas of the pool, spa, pumps, heater, visible piping, liner, ladder, steps, railing, diving board, a visual exterior inspection for leaks. We visually inspect the Pools foundation and look for any evidence of structural deficiencies. The plumbing system and their components also are tested and observed for functional flow and leaks throughout system. This report is to inform you of current condition as observed at time of inspection.
