

REASONS TO CONSIDER

High Income Potential

SPFF invests in 50 of the highest yielding preferreds in the U.S. and Canada, potentially increasing a portfolio's yield.

Monthly Distributions

SPFF makes distributions on a monthly basis and has made distributions each month for over 9 years.

Preferential Tax Treatment

Preferred securities may also provide an income advantage. Income from preferred stocks may be treated as qualified dividends (QDI), rather than as regular interest income.⁽¹⁾

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short-term performance of the Fund, when observed, is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized. For performance data current to the most recent month end, please call 1-888-493-8631, or visit www.globalxetfs.com.

DEFINITIONS

S&P Enhanced Yield North American Preferred Stock Index	The S&P Enhanced Yield North American Preferred Stock Index tracks the performance of the highest yielding preferred securities in the United States and Canada, as determined by the Index Provider. The Underlying Index is comprised of preferred stocks that meet certain criteria relating to size, liquidity, issuer concentration and rating, maturity and other requirements, as determined by the Index Provider. The Underlying Index does not seek to directly reflect the performance of the companies issuing the preferred stock. The index is maintained by S&P.
S&P U.S. Preferred Stock Index	The S&P U.S. Preferred Stock Index is designed to serve the investment community's need for an investable benchmark representing the U.S. preferred stock market. Preferred stocks are a class of capital stock that pays dividends at a specified rate and has a preference over common stock in the payment of dividends and the liquidation of assets.
12-Month Trailing Yield	The distribution yield an investor would have received if they had held the Fund over the last twelve months, assuming the most recent NAV. The 12-Month Trailing Yield is calculated by summing any income, capital gains and return of capital distributions over the past twelve months and dividing by the sum of the most recent NAV and any capital gain distributions made over the same period.
Annualized Volatility	The annualized standard deviation of the daily returns of the security using the closing levels of the index during the 22 index-day period preceding that day.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the Fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.

(1) SPFF's higher income potential may be achieved by an increased exposure to below investment grade preferreds.

(2) Credit Quality Methodology: All rated securities are rated by at least one of the three major rating agencies (Moody's, S&P, & Fitch). If more than one of these rating agencies rated the security, then an average of the ratings was taken to decide the security's rating. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest).

Investing involves risk, including the possible loss of principal. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Preferred stock is subject to many of the risks associated with debt securities, including interest rate risk. In addition, preferred stock may not pay a dividend, an issuer may suspend payment of dividends on preferred stock at any time, and in certain situations, an issuer may call or redeem its preferred stock or convert it to common stock. High yielding stocks are often speculative, high-risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund's performance. SPFF is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

This material must be preceded or accompanied by the current fund prospectus. Read it carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Beginning July 14, 2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share. Prior to July 14, 2020, market price returns were based on the midpoint between the Bid and Ask price. Market price returns. NAVs are calculated using prices as of 4:00 PM Eastern Time. The returns shown do not represent the returns you would receive if you traded shares at other times. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
