 Figure 5: Number of IPOs and Average First-day Return, 1980-2021
 Figure 6: Number and Percentage of U.S. IPOs from Chinese Companies, 1990-2021

311 operating companies went public in the U.S. in 2021, excluding ADRs, natural resource limited partnerships and trusts, closed-end funds, REITs, SPACs, banks and S&Ls, unit offers, penny stocks (offer price of less than \$5 per share), and stocks not listed on Nasdaq or the NYSE (including NYSE MKT LLC, the former American Stock Exchange). For 2016, I have included BATS Global Markets, which went public in April, but was listed on BATS before being acquired by CBOE Holdings in 2017.

Of these 311 operating companies, 262 were from the U.S. A higher volume figure has been reported in many sources (over 1,000 counting all offerings), but the higher numbers typically include not only operating companies (mostly domestic), but also some companies that were already traded in other countries and are thus actually follow-on offerings, banks and S&Ls (11 offerings, most of which are typically mutual conversions with depositors buying the stock), oil & gas partnerships or unit trusts (0 offerings), ADRs (36 offerings), REITs (5 offerings), 613 special purpose acquisition companies (SPACs), 10 closed-end funds (not including interval funds listed at cefa.com), other unit offerings (1 offerings), IPOs that do not trade on the NYSE (including NYSE MKT) or Nasdaq (0 offerings), IPOs with an offer price below \$5.00 (12 offering), and small best efforts deals (8 offerings, not all of which were small, but all but one were banks). There were also 6 direct listings. There are also several bulletin board-traded issues that I (and Dealogic) classify as follow-ons, and thus don't count, but which Thomson-Reuters classifies as IPOs.

Note: Many of these tables have been updated to include 2021 numbers with the assistance of Da Tian. Some of the tables may have slightly different counts for the number of IPOs in some years. These inconsistencies are because I periodically add or delete a company that had been misclassified or find some missing data. I do not immediately update every table. I rely on data from Thomson Reuters (SDC) and Dealogic, but also use information from IPOscoop.com and Renaissance Capital and the prospectuses, and other sources. For IPOs from June 1996 and later, the prospectuses (S.E.C. form 424B) are available on EDGAR. For IPOs from 1975-1996 (the pre-EDGAR days), I have most of the original paper prospectuses courtesy of Graeme Howard and Todd Huxster. For foreign IPOs from 1996-2000, the S.E.C. did not require electronic filing, so they are not available on EDGAR, but I have the paper copies for many of them.

In almost all of my tables, I use a more conservative definition of what is an IPO than most other data providers. Partly, the definition that is appropriate depends upon what one is focusing on. From an underwriter's point of view, anything that generates fees is relevant. I exclude some of these categories (such as LPs) partly because it is difficult to determine the founding date of the underlying assets, and I do not like to have a different number of firms in different tables. Another motivation is that I am focusing on operating companies that potentially create jobs.

Table 1: Mean First-day Returns and Money Left on the Table, 1980-2021 (updated June 4, 2022)

The sample is IPOs with an offer price of at least \$5.00, excluding ADRs, unit offers, closed-end funds, REITs, natural resource limited partnerships, small best efforts offers, banks and S&Ls, and stocks not listed on CRSP (CRSP includes Amex, NYSE, and NASDAQ stocks). Proceeds exclude overallotment options. The amount of money left on the table is defined as the closing market price on the first-day of trading minus the offer price, multiplied by the shares offered.

Year	Number of IPOs	Mean First-day Return		Aggregate Amount Left on the Table	Aggregate Proceeds
		Equal-weighted	Proceeds-weighted		
1980	71	14.3%	20.0%	\$0.18 billion	\$0.91 billion

1980-2021	9,088	18.9%	20.5%	\$230.39 billion	\$1,121.3 bn	\$7,324 billion

Table 2 (updated February 17, 2022)**Mean First-day Returns, Categorized by Sales, for IPOs from 1980-2021**

Sales, measured in millions, are for the last twelve months prior to going public. All sales have been converted into dollars of 2003 purchasing power, using the Consumers Price Index. From January 2003 to January 2021, the CPI has increased by 43.9%, so \$10 million in 2003 is equivalent to \$14.39 million in 2021. There are 9,084 IPOs, after excluding IPOs with an offer price of less than \$5.00 per share, units, REITs, SPACs, ADRs, closed-end funds, banks and S&Ls, small best efforts offers, firms not listed on CRSP within six months of the offering, and natural resource limited partnerships. Sales are from Thomson Financial's SDC, Dealogic, EDGAR, and the Graeme Howard-Todd Huxster collection of pre-EDGAR prospectuses. The average first-day return is 18.9%.

	1980-1989		1990-1998		1999-2000		2001-2021	
	Return	N	Return	N	Return	N	Return	N
0≤sales<\$10m	10.3%	425	17.4%	742	68.7%	332	19.6%	660
\$10m≤sales<\$20m	8.6%	242	18.5%	393	81.4%	138	21.5%	106
\$20m≤sales<\$50m	7.8%	500	18.8%	789	75.5%	154	20.3%	271
\$50m≤sales<\$100m	6.3%	356	12.8%	590	62.9%	85	22.3%	357
\$100m≤sales<\$200m	5.1%	234	11.8%	454	35.8%	56	22.7%	316
\$200m≤sales	3.4%	290	8.7%	646	25.0%	91	13.8%	859
All	7.2%	2,047	14.8%	3,614	64.6%	856	18.5%	2,569

Table 3 (updated February 16, 2022)**IPO Turnover Categorized by Decade and First-Day Return, 1983-2021**

IPOs with an offer price below \$5.00 per share, unit offers, closed-end funds, REITs, bank and S&L IPOs, SPACs, natural resource limited partnerships, all foreign companies, and those with missing volume numbers on CRSP (3 IPOs) are excluded. Turnover is defined as the maximum of the first three days' CRSP trading volume divided by the number of shares issued (not including the overallotment option). The highest of these first three days is almost always the first day. For Nasdaq-listed IPOs, the trading volume is divided by 2 for January 1983-January 2001, by 1.8 for February 2001-December 2001, and by 1.6 for 2002-2003 to allow more meaningful comparisons with NYSE and Amex (now NYSE MKT)-listed IPOs. As explained in Appendix B of Gao and Ritter's 2010 *Journal of Financial Economics* article "The Marketing of Seasoned Equity Offerings," in 2001, Nasdaq changed its trade-reporting rules, and in 2002, institutions changed the way they reported Nasdaq trades. IPOs before 1983 are not included because CRSP has volume for very few of these stocks. For approximately 30 IPOs, the observation is deleted because the (adjusted) turnover is less than 1%.

For Republic Airways Holding (20040526), the CRSP volume of 131,952 is replaced with Bigcharts volume of 1,203,600; for Nucrust Pharmaceuticals (20051222), the CRSP volume of 49,056 is replaced with Bigcharts volume of 714,500; for Stevanto Group (20210716) the CRSP volume of 49 is replaced with eBigCharts volume of 12,538,610. For BATS Global Markets (20160415), which is listed on BATS, Yahoo Finance is the source of volume and long-run returns, and I have created a CRSP PERM of 12345 for it.

Panel A: Percentage of U.S. Operating Company IPOs with Turnover Greater Than 100%

Time Period	Number of IPOs	Percentage with Turnover > 100%	Percentage of IPOs on Nasdaq
1983-1989	1,655	0.0%	87%
1990-1998	3,408	1.1%	84%
1999-2000	786	21.4%	91%
2001-2021	2,276	14.7%	67%
Total	8,125	6.6%	80%

Panel B: Average Turnover Categorized by First-Day Returns

Table 3b (updated February 17, 2022)

Mean First-day Turnover for NYSE and Nasdaq IPOs, 1983-2021

The sample is composed of the IPOs of U.S.-based companies with an offer price of at least \$5.00 and listed on the NYSE (excluding NYSE American and NYSE MKT issues after the merger in 2008) or Nasdaq (excluding Nasdaq small cap issues before October 2005 and, after Sept. 2005, Nasdaq capital market issues), excluding ADRs, unit offers, closed-end funds, REITs, partnerships, banks and S&Ls, and stocks not listed on CRSP (CRSP includes Amex, NYSE, and NASDAQ stocks). Turnover is volume divided by shares issued. Volume is the maximum of the first three days, which is almost always the first day. For 2004-2021, first-day volume is used unless the second day volume is more than five times the first-day volume. Shares issued excludes over allotment options, but includes the global offering size. To adjust for institutional features of the way that Nasdaq and NYSE-Amex volume are computed, we use the procedure discussed in Appendix B of Xiaohui Gao and Jay Ritter's 2010 *Journal of Financial Economics* article "The Marketing of Seasoned Equity Offerings." Prior to February 1, 2001, we divide Nasdaq volume by 2.0. This accounts for the practice of counting as trades both trades with market makers and trades among market makers. On February 1, 2001, a "riskless principal" rule went into effect, that resulted in a reduction of approximately 10% in reported volume. Thus, for February 1, 2001 to December 31, 2001, we divide Nasdaq volume by 1.8. During 2002, securities firms began to charge institutional investors commissions on Nasdaq trades, rather than the prior practice of merely marking up or down the net price, resulting in a further reduction in reported volume of approximately 10%. Thus, for 2002 and 2003, we divide Nasdaq volume by 1.6. For 2004 and later years, in which much of the volume of Nasdaq (and NYSE) stocks has been occurring on crossing networks and other venues, we use a divisor of 1.0, reflecting the fact that there are no longer important differences in the reporting of Nasdaq and NYSE volume. Approximately 30 IPOs with adjusted first-day turnover of less than 1% of the issue size are excluded.

Year	Number of IPOs			Unadjusted			With Nasdaq Adjustment	
	Total	NYSE	Nasdaq	Total	NYSE	Nasdaq	Nasdaq	Total

Table 4 (updated June 17, 2022)

Median Age and Fraction of IPOs with VC and Buyout Backing, 1980-2021

There are 9,088 IPOs after excluding those with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, oil & gas limited partnerships, acquisition companies, REITs, bank and S&L IPOs, and firms not listed on CRSP. Missing numbers are supplemented by direct inspection of prospectuses on EDGAR, information from Dealogic for IPOs after 1991, Howard and Co.'s *Going Public: The IPO Reporter* from 1980-1985, the Graeme Howard-Todd Huxster collection of IPO prospectuses for 1975-2006, and the Stanford GSB microfiche collection of registration statements from the 1980s. Tech stocks are defined as internet-related stocks plus other technology stocks, not including biotech. Loughran and Ritter (2004) list the SIC codes in their appendix 3 and sources of founding dates in appendix 1. Age is defined as the year of the IPO minus the year of founding. For buyout-backed IPOs, the founding date of the predecessor company is used. For rollups, the founding date of the oldest acquired company is used in most cases. Private equity (PE) or buyout-backed IPOs were restricted to "reverse LBOs" in the 1980s and 1990s. Jerry Cao has assisted with providing information on which IPOs are buyout-backed.

The financial backers of some companies are easy to classify, such as when Sequoia Capital and Kleiner Perkins invested in Google, or when KKR invested in Dollar General. But other situations involve growth capital investing, as when Warburg Pincus finances a company that rolls up some doctors' offices. With just two categories (VC and buyout), there is some arbitrariness in the categorization of IPOs backed by growth capital investors. 449 growth capital-backed IPOs are classified as VC-backed.

The last column gives the percentage of tech stocks that have VC backing.

The definition of technology stocks has been changed from that in Loughran and Ritter (2004 *Financial Management*), with SIC=3559, 3576, and 7389 added to tech. Some 7389 (business services) companies have had their SIC codes changed into non-tech categories, such as consulting and two new SIC codes: 5614 for telemarketing firms and 7388 for non-tech business services such as Sotheby's Auctions.

Table 4a (updated June 17, 2022)

Technology Company IPOs, 1980-2021 including Direct Listings

There are 3,299 IPOs and 9 direct listings that are tech stocks, for a total of 3,308 listings, after excluding those with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, natural resource limited partnerships (and most other LPs, but not buyout firms such as Carlyle Group), acquisition companies, REITs, bank and S&L IPOs, and firms not listed on CRSP. Missing and questionable numbers from the SDC new issues database are supplemented by direct inspection of prospectuses on EDGAR, information from Dealogic for IPOs after 1991, Howard and Co.'s *Going Public: The IPO Reporter* from 1980-1985, and the Graeme Howard-Todd Huxster collection of IPO prospectuses for 1975-2006. Tech stocks are defined as internet-related stocks plus other technology stocks including telecom, but not including biotech. Loughran and Ritter (2004) list the SIC codes in their appendix 3 and sources of founding dates in appendix 1. The definition of technology stocks has been changed from that in Loughran and Ritter (2004 *Financial Management*), with SIC=3559, 3576, 3844, and 7389 added to tech. Some 7389 (business services) companies have had their SIC codes changed into non-tech categories, such as consulting and two new SIC codes that I have made up: 5614 for telemarketing firms and 7388 for non-tech business services such as Sotheby's Auctions. I have also added the S.E.C.'s computer communications equipment code of 3576 for 21 companies, including Cisco Systems.

For the column with VC-backed IPOs, there are 3,469 IPOs including both technology and non-technology companies.

For buyout-backed IPOs, the founding date of the predecessor company is used. Price-to-sales ratios are computed using both the offer price (OP) and the first closing market price (MP) for computing the market capitalization of equity. Market cap is calculated using the post-issue shares outstanding, with all share classes included in the case of dual-class companies. The undiluted number of shares is used, which in some cases (e.g., Facebook, Twitter, and Castlight Health) understates the market cap due to the existence of substantial amounts of in-the-money employee stock options that are highly likely to be exercised. Sales are the last twelve months (LTM) revenues as reported in the prospectus. The median sales, in millions, is expressed in both nominal dollars and in dollars of 2014 purchasing power using the CPI. The median age, in years, is the number of years since the calendar year of the founding date and the calendar year of the IPO. The percentage of IPOs that are profitable measures profitability using trailing LTM earnings (usually using after extraordinary items earnings, and usually using pro forma numbers that are computed assuming that any recent or concurrent mergers have already occurred, and the conversion of convertible preferred stock into common stock). In some cases, last fiscal year earnings are used when LTM earnings are unavailable.

Even concepts like market cap (for the price-to-sales ratios) become ambiguous when you realize that companies like Facebook have many deep in-the-money options outstanding, so whether you use the fully diluted number of shares or the undiluted number can affect the calculations substantially for some companies.

(table on the next page)

Year	Number of Tech IPOs	Proceeds in \$millions		Median Price-to-sales		Median sales, \$mm		Median age	% profitable
		VC-backed	Technology	OP	MP	Nominal	\$2014

Table 4b (updated June 17, 2022)

Technology and Biotechnology (Biopharma) Company IPOs, 1980-2021

There are 3,299 tech and 1,008 biotech IPOs from 1980-2021, after excluding those with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, partnerships, acquisition companies, REITs, bank and S&L IPOs, and firms not listed on CRSP. Biotech includes pharmaceutical firms.

Missing and questionable numbers from the SDC new issues database are supplemented by direct inspection of prospectuses on EDGAR, information from Dealogic for IPOs after 1991, Howard and Co.'s *Going Public: The IPO Reporter* from 1980-1985, and the Graeme Howard-Todd Huxster collection of IPO prospectuses for 1975-2006. Tech stocks are defined as internet-related stocks plus other technology stocks including telecom, but not including biotech. Loughran and Ritter (2004) list the SIC codes in their appendix 3 and sources of founding dates in appendix 1. The definition of technology stocks has been changed from that in Loughran and Ritter (2004 *Financial Management*), with SIC=3559, 3576, and 7389 added to tech. Some 7389 (business services) companies have had their SIC codes changed into non-tech categories, such as consulting and two new SIC codes that I created: 5614 for telemarketing firms and 7388 for non-tech business services such as Sotheby's Auctions. I have also added the S.E.C.'s computer communications equipment code of 3576 for 21 companies, including Cisco Systems.

Biotech is defined as SIC=2830, 2833, 2834, 2835, 2836, and 8731.

Sales are the last twelve months (LTM) revenues as reported in the prospectus. The median sales, in millions, are expressed in dollars of 2014 purchasing power using the CPI. Pro forma numbers are usually used if there have been recent mergers or mergers that coincide with the IPO. The percentage of IPOs that are profitable measures profitability using trailing LTM earnings (usually using after extraordinary items earnings, and usually using pro forma numbers that are computed assuming that any recent or concurrent mergers have already occurred, and the conversion of convertible preferred stock into common stock). In some cases, last fiscal year earnings are used when LTM earnings are unavailable.

(table on the next page)

Year	Number of IPOs			% Profitable			Median sales (\$2014, millions)		
	Tech	Biotech	Other	Tech	Biotech	Other	Tech	Biotech	Other

Table 4c (February 16, 2022)

VC-backed, Growth Capital-backed, and Buyout-backed IPOs, 1980-2021

There are 9,086 IPOs after excluding those with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, natural resource limited partnerships, special purpose acquisition companies (SPACs), REITs, bank and S&L IPOs, small best efforts offerings, and firms not listed on CRSP within six months of the IPO. Missing numbers in the Thomson Reuters new issues database are found by direct inspection of prospectuses on EDGAR, information from Dealogic for IPOs after 1989, Howard and Co.'s *Going Public: The IPO Reporter* from 1980-1985, and the Graeme Howard-Todd Huxster collection of IPO prospectuses for 1975-1996. Some foreign company IPOs from 1997-2001 that did not use ADRs but did not file electronically, and therefore do not have a prospectus available on EDGAR, were also accessed from the Graeme Howard-Todd Huxster database. Additional information was collected from microfiches at Stanford's GSB library. Tech stocks are defined as internet-related stocks plus other technology stocks including telecom, but not including biotech. Loughran and Ritter (2004) list the SIC codes in their appendix 3 and sources of founding dates in appendix 1, and I have slightly updated the classifications.

Growth capital-backed IPOs are IPOs with a financial sponsor that, unlike a buyout-sponsored deal, typically owns far less than 90% of the equity prior to the IPO. Furthermore, many growth capital-backed IPOs have debt in their capital structure. The main criteria for classifying a financial sponsor as growth capital rather than venture capital is whether the company is investing in tangible assets (e.g., stores or hospitals) or intangibles (e.g., R&D); this is highly correlated with the industry of the company: restaurants, retail operations such as clothing store chains, healthcare operations (doctors' offices and dental offices), and retirement homes are generally classified as growth capital-backed. Many growth capital-backed IPOs are involved in rollups of a fragmented industry, where the financial sponsor has provided capital to make acquisitions to consolidate a fragmented industry, such as funeral homes. If a company is growing via acquisitions, it would generally be categorized as growth capital-backed rather than venture-backed. Jerry Cao has provided some information on which IPOs are buyout-backed. **449 growth capital-backed IPOs are not classified as VC-backed in this table.** See my article "Growth Capital-backed IPOs" in *The Financial Review* (November 2015) for further details.

Table 4d (updated February 17, 2022)

VC-backed IPOs, U.S.-headquartered Companies Only, 1980-2021

There are 3,509 venture capital-backed IPOs of U.S. headquartered companies, after excluding those with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, natural resource limited partnerships (and most other LPs, but not buyout firms such as Carlyle Group), acquisition companies, REITs, bank and S&L IPOs, and firms not listed on CRSP. VC-backed includes growth capital-backed IPOs. Missing and questionable numbers from the SDC new issues database are supplemented by direct inspection of prospectuses on EDGAR, information from Dealogic for IPOs after 1991, Howard and Co.'s *Going Public: The IPO Reporter* from 1980-1985, and the Graeme Howard-Todd Huxster collection of IPO prospectuses for 1975-1996.

The public float is calculated as the shares issued multiplied by the first closing market price, and does not include overallotment shares. All numbers use the undiluted number of shares outstanding. For dual-class companies such as Facebook, all share classes are included, with the assumption that the price per share is the same for each class.

Even concepts like market cap (for the price-to-sales ratios) become ambiguous when you realize that companies like Facebook have many deep in-the-money options outstanding, so whether you use the fully diluted number of shares or the undiluted number can affect the calculations substantially for some companies.

Example: For 1980, the 23 VC-backed IPOs raised \$388 million, the shares of which had a market cap of \$500 million using the first closing market price. The market cap, using all shares outstanding, was \$3.374 billion in total. Of this, Apple Computer issued 4.6 million shares at \$22 per share (proceeds of \$101.2 million), closing at \$28.75 per share (public float value of \$132.25 million), with 55.136 million shares outstanding (\$1,585 million market cap).

(table on the next page)

Year	U.S.-headquartered VC-backed IPOs		At first market price, \$millions	
	Number	Proceeds in \$millions	Public float	Market cap

Table 4g (updated June 17, 2022)

Biotechnology (Biopharma) Company IPOs, 1980-2021

IR is the initial return (underpricing), measured as the equally weighted average of the first-day return from the offer price to close. There are 1,008 biotech IPOs from 1980-2021, after excluding those with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, partnerships, special purpose acquisition companies (SPACs), REITs, bank and S&L IPOs, and firms not listed on CRSP. Missing and questionable numbers from the SDC new issues database are supplemented by direct inspection of prospectuses on EDGAR, information from Dealogic for IPOs after 1991, Howard and Co.'s *Going Public: The IPO Reporter* from 1980-1985, and the Graeme Howard-Todd Huxster collection of IPO prospectuses for 1975-2006.

Biotech includes pharmaceutical firms. Biotech is defined as SIC=2830, 2833, 2834, 2835, 2836, and 8731.

Sales are the last twelve months (LTM) revenues as reported in the prospectus. The median sales, in millions, are expressed in dollars of 2014 purchasing power using the CPI. Pro forma numbers are usually used if there have been recent mergers or mergers that coincide with the IPO. The percentage of IPOs that are profitable measures profitability using trailing LTM earnings (usually using after extraordinary items earnings, and usually using pro forma numbers that are computed assuming that any recent or concurrent mergers have already occurred, and the conversion of convertible preferred stock into common stock). In some cases, last fiscal year earnings are used when LTM earnings are unavailable. EPS is earnings per share. Age is the median age in years, defined as the calendar year of the IPO minus the calendar year of founding.

Many of the biotech companies with positive sales have research contracts producing revenue, rather than product sales.

(table on the next page)

2020	153	42.4	7.2	50.3	42.5
2021	293	24.8	18.1	56.3	25.6
1990-2021	6,625	21.6	27.0	46.8	26.2

Banks and S&Ls are included in this table, which excludes IPOs with a midpoint of the original file price range of less than \$8.00, as well as unit offers, small best efforts offers, ADRs, closed-end funds, REITs, partnerships, acquisition companies (SIC=6779), and stocks not listed on CRSP (CRSP includes firms listed on the NYSE, Amex (now NYSE MKT) and NYSE Arca, and NASDAQ). If a \$5.00 offer price screen was used instead of the \$8.00 midpoint screen, the sample size would increase by, for example, 20 IPOs in 1999 and 13 in 2000. Lo and Hi are the minimum and maximum of the original file price range. Because the average first-day return is lower on the firms that are added than on those that are deleted, the 10.1% average first-day return in 2005 is less than the 10.3% reported in other tables, such as Table 1.

Table 7 (updated February 17, 2022)

Percentage of IPOs relative to file price range:

	Below	Within	Above
1980-1989	30%	57%	13%
1990-1998	27%	49%	24%
1999-2000	18%	38%	44%
2001-2019	33%	45%	22%
2020-2021	14%	55%	31%
1980-2021	28%	49%	23%

Average first-day returns relative to file price range:

	Below	Within	Above
1980-1989	0%	6%	20%
1990-1998	4%	11%	31%
1999-2000	8%	26%	122%
2001-2019	3%	12%	38%
2020-2021	6%	24%	54%
1980-2021	3%	12%	50%

The sample used in this table is described in Table 6.

Table 8 (updated February 21, 2022)

**Number of Offerings, Average First-day Returns, and
Gross Proceeds of Initial Public Offerings in 1960-2021**

Data from 1960-1974 is taken from Table 1 of Roger Ibbotson, Jody Sindelar, and Jay R. Ritter's 1994 *Journal of Applied Corporate Finance* article "The Market's Problems with the Pricing of Initial Public Offerings" Vol. 7, No. 1 (Spring 1994), pp. 66-74. Data from 1975-2021 are compiled by Jay R. Ritter using Thomson Financial, Dealogic, IPOscoop.com, and other sources. The 1975-1993 numbers are different from those reported in the 1994 *JACF* article because the published article included IPOs that did not qualify for listing on Nasdaq, the Amex, or NYSE (mainly penny stocks). Unlike other tables, bank and S&L IPOs are included in the counts in this table.

Year	Number of Offerings¹	Average First-day Return²	Gross Proceeds, \$ Millions³
1960	269	17.8%	553
1961	435	34.1%	1,243

2019	119	22.4%	39,479
2020	165	41.6%	61,860
2021	315	31.9%	119,631
1960-69	2,661	21.2%	7,988
1970-79	1,536	7.1%	6,663
1980-89	2,365	6.9%	60,881
1990-99	4,193	21.1%	294,826
2000-21	3,062	22.8%	788,909
1960-2021	13,826	17.7%	1,159,267

¹ Beginning in 1975, the number of offerings excludes IPOs with an offer price of less than \$5.00, ADRs, small best efforts offers, units, Regulation A offers (small issues, raising less than \$1.5 million during the 1980s and \$5 million until 2012), real estate investment trusts (REITs), SPACs, natural resource limited partnerships, and closed-end funds. Banks and S&L IPOs are included. From 2012 and later, Regulation A offerings (issues raising up to \$50 million are eligible) are included.

² First-day returns are computed as the percentage return from the offering price to the first closing market price.

³ Gross proceeds exclude overallotment options but include the international tranche, if any. No adjustments for inflation have been made.

Table 9 (updated February 18, 2022)

Fraction of IPOs with Negative Earnings, 1980-2021

IPOs with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, partnerships, acquisition companies, REITs, bank and S&L IPOs, and firms not listed on CRSP within six months of the offer date are excluded. When available, I use the earnings per share for the most recent twelve months (commonly known as LTM for last twelve months) prior to going public. When a merger is involved, we use the pro forma numbers (as if the merger had already occurred). I am not completely consistent in the use of earnings before or after extraordinary items. Some extraordinary items are associated with the IPO, including gains or losses on conversion of convertible securities at the time of the IPO, or writeups or writedowns associated with mergers. I usually use the before extraordinary items EPS if the one-time charges are associated with the IPO. When the trailing twelve months EPS number is unavailable, I use the most recent fiscal year EPS number. Missing numbers are supplemented by direct inspection of prospectuses on EDGAR, EPS information from Dealogic for IPOs after 1991, and Howard and Co.'s *Going Public: The IPO Reporter* from 1980-1995. Remaining missing numbers have been found in the Graeme Howard-Todd Huxster collection of IPO prospectuses and the Stanford Business School microfiche collection of prospectuses from the 1980s. Don Patton of UC-Davis has tracked down a couple of remaining missing numbers. Tech stocks are defined as internet-related stocks plus other technology stocks, not including biotech. Loughran and Ritter (2004) list the SIC codes in their appendix 3 and sources of founding dates in appendix 1.

Year	Number of IPOs	No. with missing EPS	Percentage Tech Stocks	Percentage of IPOs with EPS<0	Mean First-day Returns	
					EPS<0	EPS≥0
1980-1989	2,047	1	29%	19%	9.2%	6.8%
1990-1998	3,614	0	34%	32%	16.0%	14.3%
1999-2000	856	0	74%	78%	71.1%	41.6%
2001-2021	2,569	0	33%	61%	19.9%	16.5%
1980-2021	9,086	1	36%	42%	26.5%	13.3%

1980-2021	9,086	1	36%	42%	26.5%	13.3%

Table 10 (updated January 3, 2022)

Gross Spreads Continue to Remain at 7% on Moderate-Size Deals

Here are the numbers for 2001-2021 for U.S. operating company IPOs raising more than \$30 million (\$2021) using bookbuilding, using the screens in Table 1. The 16 true auctions in 2001-2013 listed in Table 13 are not included. Proceeds numbers do not include overallotment shares.

		Proceeds Category	
		\$30-125 million (inflation-adjusted in 2021 \$)	more than \$125 million (2021 \$)
<7%	3.7% (36)		51.1% (714)
=7%	95.0% (939)		48.3% (674)
>7%	1.3% (13)		0.6% (8)
Total	100% (988 IPOs)		100% (1,396 IPOs)

So, with a few exceptions (some of these are Canadian firms, and others were taken public by WRHambrecht using auctions), 7% gross spreads for moderate-size IPOs are as entrenched as ever. Indeed, in 1999-2000, deals above \$100 million increasingly had 7% spreads, and this has stuck—in 2001-2021 51.1% of large IPOs also had spreads of exactly 7%. In contrast, during 1997-1998 only 53 of 158 large IPOs (33.5%) had a gross spread of exactly 7%. See Hsuan-Chi Chen and Jay R. Ritter’s “The Seven Percent Solution” in the June 2000 issue of the *Journal of Finance* for evidence from earlier years, available at

https://site.warrington.ufl.edu/ritter/files/2018/04/Spreads_IPOs_1980-2017.pdf

Table 11 (updated January 3, 2022)

Mean and Median Gross Spreads and Number of Managing Underwriters, 1980-2021

IPOs with an offer price below \$5.00 per share, unit offers, ADRs, closed-end funds, REITs, bank and S&L IPOs, energy limited partnerships, and firms not listed on CRSP within six months of the offer date are excluded. EW is equally weighted and PW is proceeds-weighted. The fraction=7% is the percentage of IPOs with a gross spread equal to exactly 7%. The number of managing underwriters is the sum of both leads and co-managers. The decrease in the fraction of IPOs with a 7% spread in 2001-2002 is due to the smaller fraction of deals with proceeds of less than \$150 million. In 2008 (Visa with a spread of 2.8% on a \$17.9 billion IPO), 2010 (General Motors with a spread of 0.75% on a \$15.8 billion IPO), 2012 (Facebook with a 1.1% spread on a \$16 billion IPO), and 2019 (Uber Technologies with a spread of 1.3% on an \$8.1 billion IPO), a higher fraction of IPOs were mega-deals with a gross spread far below 7%. UW is Underwriter.

In the top panel, proceeds categories are expressed in dollars of 2021 purchasing power, and over-allotment shares are not included. The bottom panel (on the next page) reports year-by-year numbers.

Mean and Median Gross Spreads by Proceeds Categories, 2001-2021 (\$2021)

Proceeds	Number of IPOs	Mean Gross spread	Median Gross spread	Mean First-day Returns
Less than \$10 million	23	7.77%	7.50%	13.0%
\$10-49.99 million	270	7.15%	7.00%	21.8%
\$50-99.99 million	594	6.97%	7.00%	9.7%
\$100-199.99 million	749	6.91%	7.00%	23.1%
\$200-999.99 million	800	6.30%	6.50%	20.3%
\$1 billion or more	131	4.16%	4.35%	16.4%
2001-2021	2,567	6.63%	7.00%	18.5%

Note: For the smallest deals, it is not uncommon to have a “nonaccountable expense allowance” equal to up to 3% of the proceeds in addition to the gross spread. As a result, the underwriter compensation for these small deals is higher than the numbers reported here.

Year	Number of IPOs	Gross Spreads				Fraction with Multiple Bookrunners	Number of Managing UWs

Table 12a (updated March 11, 2022)**Number of IPOs Categorized by the LTM Sales (in 2005 \$), 1980-2021**

MV is the post-issue market value valued at the **first closing price**. Sales and MV are in millions. PSR is the price-to-sales ratio. There has been 46.8% CPI inflation since 2005, and thus the cutoff would be \$73.4 million in 2022 dollars.

Year	Number of IPOs		Percentage of IPOs		Medians, \$2005

Table 13 (updated January 3, 2022)

IPO Auctions in the U.S., 1999-2021

The average first-day return on WRHambrecht’s 19 IPO auctions has been 12.6%. For the 22 auction IPOs, including those by other underwriters, the average first-day return has been 12.5%. In 2020-2021, the five IPOs listed used bookbuilding although the issuer insisted that all indications of interest include both price and quantity indications. For IPO auctions for which WRHambrecht was the bookrunner, the numbers are as follows:

Name of IPO (ticker)	Date of IPO	Gross Spread	Gross Proceeds	First-day Return
1999: (3 out of 476 IPOs)				
Ravenswood Winery (RVWD)	19990408	4.00%	\$10.5 million	3.62%
Salon.com (SALN)	19990622	5.00%	\$26.25 million	-4.76%
Andover.net (ANDN)	19991208	6.50%	\$72.0 million	252.08%
2000: (1 out of 380 IPOs)				
Nogatech (NGTC)	20000518	6.50%	\$42.0 million	-21.58%
2001: (2 out of 79 IPOs)				
Peet’s Coffee (PEET)	20010125	6.50%	\$26.4 million	17.25%
Briazz (BRZZ)	20010502	6.00%	\$16.0 million	0.38%
2002: (1 out of 66 IPOs)				
Overstock.com (OSTK)	20020529	4.00%	\$39.0 million	0.23%
2003: (2 out of 63 IPOs)				
RedEnvelope (REDE)	20030925	6.00%	\$30.8 million	3.93%
Genitope (GTOP)	20031029	7.00%	\$33.3 million	11.11%
In 2003, WRHambrecht was also the joint bookrunner with JP Morgan on the Sunset Financial Resources IPO that did not use an auction.				
2004: (1 out of 173 IPOs)				
New River Pharmaceuticals (NRPH)	20040805	7.00%	\$33.6 million	-6.25%
In 2004, WRHambrecht was a co-manager on the Google auction IPO for which CSFB and Morgan Stanley were the bookrunners. The IPO climbed 18.04% on its first day of trading.				
2005: (5 out of 159 IPOs)				
B of I Holding (BOFI)	20050315	6.00%	\$35.1 million	0.00%
Morningstar (MORN)	20050502	2.00%	\$140.83 million	8.38%
CryoCor (CRYO)	20050714	7.00%	\$40.8 million	-1.18%
Avalon Pharmaceuticals (AVRX)	20050928	7.00%	\$28.8 million	-5.10%
Dover Saddlery (DOVR)	20051117	5.00%	\$27.5 million	2.50%
2006: (2 out of 157 IPOs)				
Traffic.com (TRFC)	20060125	6.00%	\$78.6 million	1.25%
FortuNet (FNET)	20060131	4.50%	\$22.5 million	0.56%

2007: (2 out of 159 IPOs)

Interactive Brokers Group (IBKR)	20070504	1.88%	\$1,200.4 million	4.30%
Clean Energy Fuels (CLNE)	20070525	5.85%	\$120.0 million	0.33%

In 2007, WRHambrecht was a co-manager on the Netsuite auction IPO for which Credit Suisse was the bookrunner. The IPO climbed 36.54% on the first day of trading.

2008: (0 out of 21 IPOs)

In 2008, WRHambrecht was a co-manager on the Rackspace Hosting auction IPO for which Credit Suisse, Goldman Sachs, and Merrill Lynch were joint bookrunners. The IPO dropped 19.92% on its first day of trading.

2009: (0 out of 41 IPOs)**2010: (0 out of 91 IPOs)****2011: (0 out of 81 IPOs)****2012: (0 out of 93 IPOs)****2013: (1 out 158 IPOs)**

Truett-Hurst Inc (THST)	20130619	7.00%	\$16.2 million	-5.33%
-------------------------	----------	-------	----------------	--------

2014: (0 out of 206 IPOs)**2015: (0 out 118 IPOs)****2016: (0 out of 75 IPOs)****2017: (0 out of 106 IPOs)****2018: (0 out of 134 IPOs)****2019: (0 out of 112 IPOs)****2020: (3 out of 165 IPOs)**

Unity Software (U)	20200918	4.75%	\$1,300.0 million	31.4%
DoorDash (DASH)	20201209	2.40%	\$3,366.0 million	85.8%
Airbnb (ABNB)	20201210	2.12%	\$3,490.0 million	112.8%

2021:

ACV Auctions (ACVA)	20210324	6.00%	\$413.8 million	25.0%
Marqeta (MQ)	20210609	6.50%	\$1,227.3 million	13.0%

Financial press articles stated that Unity required that all indications of interest submitted to the lead-left underwriter (Goldman Sachs) had to include a price as well as quantity of shares requested. Bids at multiple prices were permitted. All bids at or above the offer price received shares, but Unity reserved the right to make non-pro rata allocations among the winning bidders. DoorDash (Goldman Sachs), Airbnb (Morgan Stanley), ACV Auctions (Goldman Sachs), and Marqeta (Goldman Sachs) used similar procedures. All raised the offer price substantially, but still left huge amounts of money on the table.

WR Hambrecht has also been a bookrunner on several other IPOs that did not use an auction. For example, on 20150415, they did a \$76 million best efforts IPO of Xbiotech (XBIT), which increased 22.37% on the first day of trading, on 20170630 they did a \$12.0 million IPO for ShiftPixy, and on 20170921 they did a \$19.1 million IPO for Arcimoto.

Table 13a: Direct Listings in the U.S., 2018-2022
(updated May 19, 2022)

With direct listings, no shares trade hands at the reference price. Instead, there is typically a large block trade at the open. The first-day return is thus calculated from the open to the closing price. With traditional IPOs, including auctions, the first-day return would be computed from the offer price to the close. The returns calculated in these two manners reflect the returns earned by buyers who bought from the issuer and selling shareholders. The July 2019 Nasdaq listing of iHeartMedia (IHRT) is not included because the stock was traded OTC beforehand. For Watford Holdings, the “Current Reference Price” is used instead of a “Reference Price” based on the front page of the SEC Form 424B3 prospectus. For this company, there had been no private market transactions on which to base a reference price. The current reference price was defined to be the market-clearing opening price.

Thryv Holdings has unusually low volume on the first day of trading, only 9,569 shares (this number has been confirmed with the company as correct). It had much higher volume on the second day, 208,916 shares, with a price jump to a close of \$14.39. The prospectus for Thryv Holdings reports 30,829,145 shares outstanding, giving it a market cap at the opening price of \$430 million, considerably less than the unicorns doing direct listings.

Bright Green Corporation also did not have a reference price, but instead has a current reference price that is equal to the opening trade.

Table 13a

Direct Listings in the U.S., 2018-2022

In the bottom panel, the last column is a measure of intraday volatility on the first day of trading. The average volatility for these five direct listings is about the same as that on the IPOs of similar companies. High, low, and closing prices, as well as trading volume, come from BigCharts.Marketwatch.com or WSJ.com.

Name of IPO (ticker)	Date of Listing	Prices			First-day Return
		Reference	Open	Close	
Spotify Technology (SPOT)	20180403	\$132.00	\$165.90	\$149.01	-10.2%

Table 14 (updated February 21, 2022)

The Market Share of Foreign Companies among U.S. Listings, 1980-2021

This table includes American Depositary Receipts (ADRs) as well as other IPOs, and so has a higher total number of U.S. IPOs. I continue to exclude IPOs with an offer price below \$5.00 per share, unit offers, SPACs, REITs, closed-end funds, natural resource limited partnerships, small best efforts IPOs, banks and S&Ls, and IPOs not listed on CRSP (this last screen limits the sample to NASDAQ, Amex, and NYSE-listed issues) within six months of the offer date. Bermuda-domiciled companies are included as foreign, irrespective of the main country of operations. Bermuda, Canada, China, Greece, Israel, the Netherlands, and the United Kingdom are the most common countries for IPOs that list in the U.S. Dealogic is the main source of information on foreign IPOs, because Thomson Financial frequently classifies a follow-on offering that simultaneously includes a U.S. listing as an IPO, as does the NYSE. I have deleted these listings (a list of more than 110 of them can be found in “SDC Corrections” on my IPO Data page) from the IPO counts when I have been able to identify them. The count for Chinese IPOs does not include those from Hong Kong and excludes “reverse mergers” and best efforts IPOs. There are six bank IPOs of ADRs that are counted (1 in 1988, 1 in 1993, 2 in 1994, and 2 in 2009). There were 4 additional foreign issues in 1981, but they did not get listed on CRSP until more than six months after the IPO.

In addition to the IPOs listed in this table, there have been more than twenty Chinese IPOs with an offer price of below \$5.00 per share, plus some unit offers. Some of these deals were best efforts offerings. Those with an offer price below \$5 per share include the following (these deals raised a median of only \$8.6 million):

Table 15 (updated June20, 2022)

How Many IPOs Are There?

The net number of IPOs excludes Special Purpose Acquisition Companies (SPACs), closed-end funds, Real Estate Investment Trusts (REITs), unit offers (typically composed of a share plus a warrant to buy a share), IPOs with an offer price of less than \$5.00, commercial banks and savings and loans S&Ls), companies not promptly listed on the Amex, NYSE, or Nasdaq, master limited partnerships, small best efforts offers (included in the other exclusions column), and foreign companies issuing American Depositary Receipts (6 of which are banks). 11 ADRs are missing a first-day return, and the “including ADRs” averages exclude them. SPACs that are unit offers are classified as SPACs rather than units. No CRSP listing refers to IPOs not listed on CRSP within six months of the IPO. CRSP covers stocks listed on Nasdaq, the NYSE, and the NYSE MKT (the Amex prior to May 10, 2012).

Some IPOs are excluded for multiple reasons. For example, some bank and S&L IPOs are also excluded due to not being listed on CRSP. The bank and S&L count includes all of them (other than ADRs).

Table 15a (updated June 20, 2022)

IPO Volume and Average First-day Returns with Banks, LPs, and ADRs Included

In the last two columns of the table, the net number of IPOs is expanded to include LPs, banks and S&Ls, and ADRs. Only CRSP-listed IPOs that have first-day return information are included, and therefore the number of IPOs added is slightly less for many years than if the “net” IPO count is added to the LP count, the bank and S&L count, and the ADR count. CRSP covers IPOs that are listed on Nasdaq, NYSE, and NYSE Market (formerly Amex). If a stock takes more than six months before CRSP-listing, it is not included in the count. The sample size of 15,636 IPOs from 1980-2021 includes the 9,088 IPOs from 1980-2021 used in most tables, plus 548 ADRs with a first-day return, 227 natural resource industry limited partnerships, and 577 bank and S&L IPOs (6 of which are ADRs). There are also 14 ADRs with a missing first-day close (1 in 1986, 2 in 1988, 2 in 1989, 2 in 1992, 2 in 1993, 3 in 1994, 1 in 1995, 1 in 1997).

As with Table 15, the net number of IPOs in the first column excludes Special Purpose Acquisition Companies (SPACs), closed-end funds (not including interval funds), Real Estate Investment Trusts (REITs), unit offers (typically composed of a share plus a warrant to buy a share), IPOs with an offer price of less than \$5.00, commercial banks and savings and loans, companies not promptly listed on the Amex, NYSE, or Nasdaq, natural resource master limited partnerships, small best efforts offers (included in the other exclusions column), and foreign companies issuing American Depositary Receipts (6 of which are banks). SPACs that are unit offers are classified as SPACs rather than units.

Table 15a also differs from Table 15 in that the category of SPACs, closed-end funds, and REITs in Table 15 is decomposed into the three component parts. Blind pool offerings from the pre-2004 era were previously not included as SPACs, but I have recently added those from 1988-1997. These blind-pool offers are almost always screened out of the net number of offerings because they are either unit offers, penny stocks (offer price below \$5 per share), small best efforts deals, or were not CRSP-listed. The remaining blind pool offers are excluded in the “other reasons” category. A typical blind pool offering raised a few million dollars and investors never received anything in return.

The average first-day return on 577 bank and S&L IPOs is 6.1%, with a range of -20% to +57.5%. In most of my tables, I exclude Bank and S&L IPOs because, among other reasons, it is not always clear how many shares are sold to the general public versus sold to depositors and employees, since most of these offerings are demutualizations. The same can be said of some insurance IPOs, which I include.

The average first-day return on 558 ADR IPOs with a closing market price, including banks, is 16.7%, with a range of -37.2% to 414.3%, with the 2000 internet company Crayfish Co. Ltd IPO having the highest return, at 414.3%. In most of my tables, I exclude ADRs because, among other reasons, the accounting data is not always reliable (SDC sometimes makes translation mistakes) and the U.S. tranche may be a small part of a larger offering, especially in the home country of the company.

The average first-day return on 227 limited partnerships is 3.7%, with a range of -6.8% to +33.3%. In most of my tables, I exclude natural resource company limited partnerships because it is frequently difficult to discern the founding date of the underlying business, since most of these IPOs are spinoffs partly motivated by tax minimization strategies. Also, most of these LPs are created at the time of the IPO, and identifying whether the LP is profitable, what its trailing sales are, and what its assets are, is sometimes problematic. The same can be said of rollups, which I include. I also include newly created reinsurance companies.

Table 15b (updated June 20, 2022)

Special Purpose Acquisition Company (SPAC) IPOs, 1990-2021

IR is the initial return, measured from the offer price to the first close. Proceeds are in millions and do not include over-allotment shares. For 1990-1997 and 2004-2007, 50 of the initial returns are missing for OTC issues. For SPACs from before 2010, data has been provided by Tim Jenkinson, Andrew Karolyi, and Milos Vujanovic. SPAC Research, Gritstone Asset Management, and Dealogic have also been used as data sources. For 1990-2021, Refinitive (SDC) misclassifies over 140 SPAC IPOs, usually as closed-end funds (SIC 6726).

Year	Operating Company IPOs		SPAC IPOs			SPAC IPOs	
	Number	Mean IR	Non-unit	Unit	Total	Proceeds, \$b	Mean IR

Table 16 (updated February 15, 2022)

Long-run Returns on IPOs Categorized by the Pre-issue Sales of the Firm, 1980-2020

All Last Twelve Months (LTM) sales figures for the firms going public have been converted into dollars of January 2021 purchasing power using the Consumer Price Index. 8,775 IPOs from 1980-2020 are used, with returns calculated through the end of December 2021. IPOs with an offer price below \$5.00 per share, unit offers, ADRs, REITs, closed end funds, natural resource partnerships, banks and S&Ls, small best efforts offers, and IPOs not listed on CRSP within six months of the offer date are excluded. mm is millions of dollars. Buy-and-hold returns are calculated until the earlier of the three-year anniversary or the delisting date (no later than Dec. 31 of 2021 for IPOs from 2019 and 2020). Market-adjusted returns use the CRSP value-weighted index. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. For post-issue book value of equity numbers, I use the post-issue common equity numbers from SDC with corrections by checking the prospectus, and for the remaining missing numbers I use the equity book values reported for the nearest quarter after the IPO on COMPUSTAT, and further missing numbers are calculated using the reported pre-IPO equity book values plus the amount of the proceeds (assuming that overallotment option shares and costs of issuing offset each other) times the fraction of the primary shares. For dual-class shares, the post-issue book-to-market ratio is calculated using the larger of the post-issue number of shares reported from SDC (with corrections to account for all share classes) and the total shares outstanding reported from CRSP at end of the IPO date. Market capitalization (size) is calculated using the first closing market price after the IPO and the post-issue number of shares outstanding. All returns include dividends and capital gains, including the index returns.

Sales (in 2021\$)	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
0-9.999 mm	1,714	21.8%	-7.5%	-45.5%	-30.3%
10-19.999 mm	692	27.9%	-0.9%	-39.3%	-18.0%
20-49.999 mm	1,488	24.1%	19.5%	-23.3%	-7.9%
50-99.999 mm	1,392	18.0%	30.7%	-13.1%	-3.0%
100-499.999 mm	2,290	14.0%	45.9%	3.2%	9.0%
500 mm and up	1,199	9.8%	37.5%	0.3%	0.0%
0-99.999 mm	5,286	22.2%	11.0%	-29.9%	-15.2%
100 mm and up	3,489	12.6%	43.0%	2.2%	5.9%
1980-2020	8,775	18.4%	23.7%	-17.1%	-6.8%

Table 16a (updated February 15, 2022)

Long-run Returns on IPOs Categorized by the Pre-issue Sales of the Firm, 1980-2020

All Last Twelve Months (LTM) sales figures for the firms going public have been converted into dollars of January 2021 purchasing power using the Consumer Price Index. 8,775 IPOs from 1980-2020 are used, with returns calculated through December 31, 2021. IPOs with an offer price below \$5.00 per share, unit offers, ADRs, REITs, closed end funds, natural resource partnerships, banks and S&Ls, small best efforts offers, and IPOs not listed on CRSP within six months of the offer date are excluded. Buy-and-hold returns are calculated from the first closing market price until the earlier of the three-year anniversary or the delisting date (Dec. 31 of 2021 for IPOs from 2019 and 2020). Market-adjusted returns use the CRSP value-weighted index. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. The market-adjusted and style-adjusted returns are the average buy-and-hold return on the IPOs minus the average compounded return on the benchmark. For post-issue book value of equity numbers, I use the post-issue common equity numbers from SDC with corrections by checking the prospectus, and for the remaining missing numbers I use the equity book values reported for the nearest quarter after the IPO on COMPUSTAT, and further missing numbers are calculated using the reported pre-IPO equity book values plus the amount of the proceeds (assuming that over-allotment option shares and costs of issuing offset each other) times the fraction of the primary shares. For dual-class shares, the post-issue book-to-market ratio is calculated using the larger of the post-issue number of shares reported from SDC (with corrections to account for all share classes) and the total shares outstanding reported from CRSP at end of the IPO date. Market capitalization (size) is calculated using the first closing market price after the IPO and the post-issue number of shares outstanding. All returns include dividends and capital gains, including the index returns.

Sales (in 2021\$)	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
Less than \$1 billion	8,078	19.2%	22.5%	-18.9%	-7.9%
\$1 billion and up	697	9.2%	38.2%	3.2%	6.2%
1980-2020	8,775	18.4%	23.7%	-17.1%	-6.8%

Note: The 3.2% 3-year market-adjusted buy-and-hold return for large companies corresponds to an annualized market-adjusted return of 0.9% per year, with an average holding period of 2.9 years for the large companies, because $1.382/1.350=1.0237$, and $1.0237^{0.345}=1.009$. The 1.350 is 3.2% below the 38.2% average buy-and-hold return, and 0.345 is equal to $1/2.9$. The -17.1% 3-year market-adjusted buy-and-hold return for small (emerging growth) companies corresponds to an annualized market-adjusted return of -6.5% assuming a 2.8 year average holding period.

Table 16b (updated February 15, 2022)**Long-run Returns on IPOs Categorized by the Profitability of the Firm, 1980-2020**

All Last Twelve Months (LTM) sales figures for the firms going public have been converted into dollars of January 2021 purchasing power using the Consumer Price Index. 8,775 IPOs (including the 2016 IPO of BATS Global Markets, which listed on BATS) from 1980-2020 are used, with returns calculated through the end of December 31, 2021. IPOs with an offer price below \$5.00 per share, unit offers, ADRs, REITs, closed end funds, natural resource partnerships, banks and S&Ls, small best efforts offers, and IPOs not listed on CRSP within six months of the offer date are excluded. Buy-and-hold returns are calculated from the first closing market price until the earlier of the three-year anniversary or the delisting date (Dec. 31 of 2021 for IPOs from 2019 and 2020). Market-adjusted returns use the CRSP value-weighted index. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. The market-adjusted and style-adjusted returns are the average buy-and-hold return on the IPOs minus the average compounded return on the benchmark. For post-issue book value of equity numbers, I use the post-issue common equity numbers from SDC with corrections by checking the prospectus, and for the remaining missing numbers I use the equity book values reported for the nearest quarter after the IPO on COMPUSTAT, and further missing numbers are calculated using the reported pre-IPO equity book values plus the amount of the proceeds (assuming that overallotment option shares and costs of issuing offset each other) times the fraction of the primary shares. For dual-class shares, the post-issue book-to-market ratio is calculated using the larger of the post-issue number of shares reported from SDC (with corrections to account for all share classes) and the total shares outstanding reported from CRSP at end of the IPO date. Market capitalization (size) is calculated using the first closing market price after the IPO and the post-issue number of shares outstanding. Earnings per share (EPS) is for the pre-IPO last twelve months (LTM). All returns include dividends and capital gains, including the index returns.

Table 16e (May 25, 2022)**Distribution of 3-year and 5-year Buy-and-Hold Returns on IPOs, 1975-2018**

8,603 IPOs from 1975-2018 are used, with buy-and-hold returns calculated until the earlier of the 3-year or 5-year anniversary or the delisting date. All returns include dividends and capital gains. IPOs with an offer price below \$5.00 per share, unit offers, ADRs, REITs, closed end funds, SPACs, natural resource partnerships, banks and S&Ls, small best efforts offers, and IPOs not listed on CRSP within six months of the offer date are excluded. The average first-day return in Panel A is 17.7%, with an average 3-year buy-and-hold return (BHR) of 25.2%, measured from the first close, and 42.6%, measured from the offer price. In Panel B, the average first-day return is 12.0%, with a subsequent average 3-year buy-and-hold return of 43.1%, measured from the first close, and 59.5%, measured from the offer price. Sales is inflation-adjusted sales for the last twelve months (LTM) prior to the IPO, in dollars of January 2022 purchasing power using the CPI.

Panel A: All 8,603 IPOs

3-year buy-and-hold return	From the first close		From the offer price	
	Number of IPOs	Percentage	Number of IPOs	Percentage
BHR<-50%	3,178	36.9%	2,904	33.8%
-50%<BHR≤0%	1,858	21.6%	1,805	21.0%

1975-2018	3,564	100.0%	3,564	100.0%

Table 16e (continued)

The average first-day return in Panel C is 17.7%, with an average 5-year buy-and-hold return (BHR) of 43.1%, measured from the first close, and 63.0%, measured from the offer price. In Panel D, the average first-day return is 12.0%, with a subsequent average 5-year buy-and-hold return of 65.1%, measured from the first close, and 84.5%, measured from the offer price. Sales is inflation-adjusted sales for the last twelve months (LTM) prior to the IPO, in dollars of January 2022 purchasing power using the CPI. For the 2017 and 2018 cohorts, returns are calculated through Dec. 31, 2021 unless an IPO was delisted earlier.

Panel C: All 8,603 IPOs from 1975-2018

Table 16f (updated February 15, 2022)

Aftermarket Returns with and without Including the First-day Return

8,775 IPOs from 1980-2020 are used, with returns calculated through December 31, 2021. IPOs with an offer price below \$5.00 per share, unit offers, SPACs, ADRs, REITs, closed end funds, natural resource partnerships, banks and S&Ls, small best efforts offers, and IPOs not listed on CRSP within six months of the offer date are excluded. Buy-and-hold returns are calculated from the first closing market price until the earlier of the three-year anniversary or the delisting date (Dec. 31 of 2021 for IPOs from 2019 and 2020). Market-adjusted returns use the CRSP value-weighted index. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. The market-adjusted and style-adjusted returns are the average buy-and-hold return on the IPOs minus the average compounded return on the benchmark. Further details are reported in the captions to Tables 16a and 16b. Market capitalization (size) is calculated using the first closing market price after the IPO and the post-issue number of shares outstanding.

Tables 16c and 16d report similar numbers, but those tables exclude IPOs from the internet bubble years of 1999-2000

Panel A:

Long-run Returns Measured from the Offer Price on Tech and non-Tech IPOs, 1980-2020

Sector	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
Tech	3,180	31.2%	56.4%	21.0%	31.9%
Non-Tech	5,595	11.1%	33.5%	-10.5%	-0.5%
All	8,775	18.4%	41.8%	0.9%	11.2%

Panel B:

Long-run Returns Measured from the First Close on Tech and non-Tech IPOs, 1980-2020

Sector	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
Tech	3,180	31.2%	26.6%	-8.8%	2.1%
Non-Tech	5,595	11.1%	22.1%	-21.9%	-11.9%
All	8,775	18.4%	23.7%	-17.1%	-6.8%

Table 17 (updated February 14, 2022)

Long-run Returns on IPOs Categorized by VC-backing or Buyout Fund-backing

All Last Twelve Months (LTM) sales figures for the firms going public have been converted into dollars of January 2021 purchasing power using the Consumer Price Index. IPOs from 1980-2020 are used, with returns calculated through the end of December 2021. In Panel A, the sample size is 8,775 firms. Growth capital-backed IPOs are included in the VC-backed category. IPOs with an offer price below \$5.00 per share, unit offers, small best efforts offerings, ADRs, REITs, closed-end funds, natural resource limited partnerships, banks and S&Ls, and IPOs not listed on CRSP within six months of the offer date are excluded. In Panel B, one additional screen is implemented, reducing the sample size. This additional screen is that the last twelve months (LTM) sales of the issuing firm is at least \$50 million (2021 purchasing power). Buy-and-hold returns are calculated from the first close until the earlier of the three-year anniversary or the delisting date (Dec. 31 of 2021 for IPOs from 2020). Market-adjusted returns use the CRSP value-weighted index. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. All returns include dividends and capital gains, including the index returns. Jerry Cao of Sun Yat-sen University has assisted in providing data on the classification of IPOs as buyout-backed. Growth capital-backed IPOs are classified as VC-backed.

Panel A: IPOs from 1980-2020 categorized by venture capital backing

VC-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
VC-backed	3,487	27.2%	28.7%	-8.1%	1.0%
NonVC-backed	5,288	12.6%	20.4%	-23.1%	-12.1%
NonVC and nonBuyout	4,137	13.6%	16.9%	-29.9%	-15.2%
1980-2020	8,775	18.4%	23.7%	-17.1%	-6.8%

Note: The nonVC- and nonBuyout-backed IPOs do not include a minimum sales screen, unlike in Panel B.

Panel B: IPOs with at least \$50 million in LTM sales (2021 purchasing power) from 1980-2020 categorized by private equity (buyout fund) backing

Buyout-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
Buyout-backed	1,090	9.1%	34.5%	2.6%	2.3%
NonBuyout-backed	3,791	15.6%	40.9%	-3.5%	3.7%
All	4,881	14.1%	39.5%	-2.1%	3.4%

Table 17a (updated February 15, 2022)

Long-run Returns on IPOs Categorized by VC-, Growth Capital-, or Buyout Fund-backing

8,775 IPOs from 1980-2020 are used, with returns calculated through the end of December 2020. Buy-and-hold returns are calculated from the first closing price until the earlier of the three-year anniversary or the delisting date (Dec. 31 of 2021 for IPOs from 2019 and 2020). Market-adjusted returns use the CRSP value-weighted index. All returns include dividends and capital gains. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. This table is an updated version of Table 3 of my “Growth Capital-backed IPOs” published in the 2015 *Financial Review*. Growth capital-backed IPOs are defined to be IPOs with a financial sponsor that is financing investments in tangible assets and/or acquisitions are a major part of its growth strategy. Buyouts involve the financial sponsor taking control by buying out prior shareholders. Corporate venture capital and angel investors are not included as financial sponsors.

	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
VC-backed	3,057	29.0%	25.8%	-10.0%	-1.4%
Growth capital-backed	430	14.3%	49.5%	5.0%	10.7%
Buyout-backed	1,153	9.1%	33.0%	1.3%	0.0%
Financial Sponsored	4,638	22.7%	29.8%	-5.8%	0.1%
Non-Financial Sponsored	4,137	13.6%	16.9%	-29.9%	-14.5%
All	8,775	18.4%	23.7%	-17.1%	-6.8%

Note: The high average 3-year buy-and-hold return for growth capital-backed IPOs is partly attributable, in a mechanical sense, to the five IPOs with the highest buy-and-hold returns in this subsample: The May 10, 1984 IPO of restaurant chain This Can't Be Yogurt (4,076.6%); the April 10, 1997 IPO of middleware software developer and distributor BEA Systems (2,562.2%); the November 15, 1989 IPO of original equipment manufacturer Solectron (944.0%); the April 24, 1996 IPO of outdoor advertising (billboards) operator Outdoor Systems (935.1%); the February 9, 1983 IPO of health care provider United States Health Care (636.6%); and the September 19, 1989 IPO of health care provider Vencor (635.8%).

Table 18 (updated February 15, 2022)

Long-run Returns on IPOs Categorized by VC-backing, by Subperiod

The sample is composed of 8,775 IPOs from 1980-2020, with returns calculated through the end of December 2021. Growth capital-backed IPOs are classified as venture capital (VC)-backed in all panels. IPOs with an offer price below \$5.00 per share, unit offers, small best efforts offerings, ADRs, REITs, closed end funds, SPACs, natural resource limited partnerships, banks and S&Ls, and IPOs not listed on CRSP within six months of the offer date are excluded. Buy-and-hold returns are calculated from the first closing market price until the earlier of the three-year anniversary or the delisting date (Dec. 31 of 2021 for IPOs from 2019 and 2020). Market-adjusted returns use the CRSP value-weighted index. All returns include dividends and capital gains. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. Market capitalization (size) is calculated using the first closing market price after the IPO. All returns include dividends and capital gains, including the index returns.

Panel A: IPOs from 1980-2020 categorized by venture capital backing

VC-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
VC-backed	3,487	27.2%	28.7%	-8.1%	0.4%
NonVC-backed	5,288	12.6%	20.4%	-23.1%	-11.3%
All	8,775	18.4%	23.7%	-17.1%	-6.8%

Panel B: IPOs from 1980-1989

VC-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
VC-backed	514	8.6%	31.9%	-13.9%	14.0%
NonVC-backed	1,533	6.8%	19.3%	-25.5%	-1.8%
All	2,047	7.2%	22.5%	-22.6%	2.2%

Panel C: IPOs from 1990-1998

VC-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
VC-backed	1,267	17.3%	60.9%	-0.9%	27.1%
NonVC-backed	2,347	13.5%	28.3%	-31.8%	-15.0%
All	3,614	14.8%	39.8%	-21.0%	-0.2%

Panel D: IPOs from 1999-2000

VC-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
VC-backed	526	80.8%	-62.3%	-40.5%	-62.6%
NonVC-backed	330	38.8%	-38.5%	-17.8%	-53.1%
All	856	64.6%	-53.1%	-31.8%	-58.9%

Panel E: IPOs from 2001-2020

VC-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
VC-backed	1,180	22.0%	33.4%	1.1%	-7.2%
NonVC-backed	1,078	10.9%	22.9%	-2.2%	-4.0%
All	2,258	16.7%	28.4%	-0.5%	-5.7%

Table 19: Updated Table I of Ritter and Welch 2002 *Journal of Finance* article

Number of IPOs, First-day Returns, and Long Run Performance, IPOs from 1980-2020
(Updated May 27, 2022)

The equally weighted (EW) average first-day return is measured from the offer price to the first CRSP-listed closing price. EW average three-year buy-and-hold percentage returns (capital gains plus dividends) are calculated from the first closing market price to the earlier of the three-year anniversary price, the delisting price, or December 31, 2021. Buy-and-hold returns for initial public offerings (IPOs) occurring after Dec. 31, 2020 are not calculated. Market-adjusted returns are calculated as the buy-and-hold return on an IPO minus the compounded daily return on the CRSP value-weighted index of Amex, Nasdaq, and NYSE firms. Style-adjusted buy-and-hold returns are calculated as the difference between the return on an IPO and a style-matched firm. For each IPO, a non-IPO matching firm that has been CRSP-listed for at least five years with the closest market capitalization (size) and book-to-market ratio as the IPO is used. Market capitalization is calculated using the first closing market price after the IPO. If this stock is delisted prior to the IPO return's ending date, or if it conducts a follow-on stock offering, a replacement matching firm is spliced in on a point-forward basis. IPOs with an offer price below \$5.00 per share, unit offers, small best efforts offers, natural resource limited partnerships, REITs, closed-end funds, banks and S&Ls, ADRs, and IPOs not listed on CRSP within six months of issuing have been excluded. Data is from Thomson Financial Securities Data, with supplements from Dealogic and other sources, and corrections by the authors. The number of IPOs per year is much lower for the early 1980s than in the 1995 *Journal of Finance* article "The New Issues Puzzle" by Loughran and Ritter because that paper used a \$1.00 offer price screen. The number is larger than in the 2002 *Journal of Finance* article "A Review of IPO Activity, Pricing, and Allocations" due to various data corrections and the back-filling of Nasdaq-listed foreign issuers by CRSP.

The 1998 sample size of 283 IPOs is higher than in other tables because of corrections for two IPOs that previously screened out.

Year	Number of IPOs	Average First-day Return	Average One-year Return	Average 3-year Buy-and-hold Return		
				IPOs	Market-adjusted	Style-adjusted
1980	71	14.3%	28.7%	89.8%	37.0%	18.5%

1980-2020	8,777	18.4%	8.0%	23.7%	-17.2%	-6.8%

Table 20
Returns on IPOs during the five years after issuing, for IPOs from 1980-2019

These tables show that IPOs have underperformed other firms of the same size (market cap) by an average of 2.4% per year during the five years after issuing, not including the first-day return. The underperformance relative to other firms of the same size and book-to-market ratio has averaged 1.6% per year. Returns are through Dec. 31, 2020. (updated March 4, 2021)

Table 20-1
Percentage returns on IPOs from 1980-2019 during the first five years after issuing

	First six months	Second six months	First Year	Second year	Third year	Fourth year	Fifth Year	Geometric Mean years 1-5
IPO firms	6.5%	1.1%	8.0%	7.4%	12.9%	19.7%	10.9%	11.7%
Size-matched	5.3%	5.7%	11.4%	14.6%	15.3%	16.4%	12.7%	14.1%
Difference	1.2%	-4.6%	-3.4%	-7.2%	-2.4%	3.3%	-2.2%	-2.4%
IPO firms	6.5%	1.1%	8.0%	7.4%	12.9%	19.7%	10.9%	11.7%
Size & BM- Matched	3.9%	4.7%	8.8%	13.2%	12.5%	17.6%	12.8%	12.9%
Difference	2.6%	-3.6%	-0.8%	-5.8%	0.4%	2.1%	-1.9%	-1.2%
No. of IPOs	8,610	8,588	8,610	8,461	7,676	6,716	5,883	

All returns are equally weighted average returns for all IPOs that are traded on Nasdaq, the Amex (now NYSE MKT), or the NYSE at the start of a period. For the first and third columns, the returns are measured from the closing market price on the first day of CRSP-reported trading until the sixth-month or one-year anniversary. For years 2-5, each year the portfolios are rebalanced to equal weights. If an issuing firm is delisted within a year, its return for that year is calculated by compounding the CRSP value-weighted market index for the rest of the year. For the size-matched returns, each IPO is matched with the nonissuing firm having the same or next higher market capitalization (using the closing market price on the first day of trading for the IPO, and the market capitalization at the end of the previous month for the matching firms). For the size & BM-matched returns, each IPO with a book-to-market ratio higher than zero is matched with a nonissuing firm in the same size decile (using NYSE firms only for determining the decile breakpoints) having the closest book-to-market ratio. Each IPO with a zero or smaller book-to-market ratio is matched with a nonissuing firm of a book-to-market ratio of zero or smaller having the closest market capitalization. For the IPOs, book-to-market ratios are calculated using the first recorded post-issue book value and the post-issue market cap calculated using the closing market price on the first CRSP-listed day of trading. For nonissuing firms, the Compustat-listed book value of equity for the most recent fiscal year ending at least four months prior to the IPO date is used, along with the market cap at the close of trading at month-end prior to the month of the IPO with which it is matched. Nonissuing firms are those that have been listed on the Amex-Nasdaq-NYSE for at least five years, without issuing equity for cash during that time. If a nonissuer subsequently issues equity, it is still used as the matching firm. If a nonissuer gets delisted prior to the delisting (or the fifth anniversary), the second-closest matching firm on the original IPO date is substituted, on a point-forward basis. For firms with multiple classes of stock outstanding, market cap is calculated using the offer price and the total number of shares outstanding across all classes of stock as reported in Compustat. Firms with multiple classes of stock are excluded as potential matching candidates. The sample size is 8,610 IPOs from 1980-2019, excluding IPOs with an offer price of less than \$5.00, ADRs, REITs, acquisition funds, closed-end funds, banks and S&Ls, unit offers, small best efforts deals, and oil & gas limited partnerships. For the 1980s and later, IPOs that are not listed on CRSP within six months of the IPO are excluded. For IPOs from 1980 and later, if book value numbers are missing so that no style-matched firm is available as a benchmark, the value-weighted market return is used for the matching firm return. Returns are measured through December 31, 2020. For partial event-years that end on this date, the last partial year is deleted from the computations. For example, for an IPO on March 15, 2019, its first-year return is included, but not the second-year return.

Table 20-2
Percentage returns on IPOs from 1980-1989 during the first five years after issuing

	First six months	Second six months	First year	Second year	Third Year	Fourth year	Fifth year	Geometric mean years 1-5

Returns are through December 31, 2020. Thus, the fifth-year returns are only for those IPOs from 2000 to 2015, and the fourth-year returns are only for those IPOs from 2000 to 2016, etc. Note that the fifth-year returns are available only for those IPOs that survived for at least four years.

Table 21 (updated May 27, 2022)**The Mean and Median Percentage Public Float, 1980-2021**

The public float is the number of shares issued in the IPO (not including overallotment shares) divided by the post-issue number of shares outstanding in all share classes, multiplied by 100%.

Year	Number of IPOs	Public Float, %		Percentiles	
		Mean	Median	25 th	75 th

Table 23 (updated May 18, 2022)**Dual Class IPOs**

This table lists the number of IPOs each year that have dual class shares among tech IPOs and among non-tech IPOs. The sample is IPOs with an offer price of at least \$5.00, excluding ADRs, unit offers, closed-end funds, REITs, natural resource limited partnerships, small best efforts offers, banks and S&Ls, and stocks not listed on CRSP (CRSP includes Amex, NYSE, and NASDAQ stocks).

	Tech IPOs			Non-tech IPOs			All IPOs		
	Dual	Total	%	Dual	Total	%	Dual	Total	%
1980	0	22	0%	1	49	2.0%	1	71	1.4%
1981	2	72	2.8%	4	120	3.3%	6	192	3.1%
1982	0	42	0%	0	35	0.0%	0	77	0.0%
1983	3	173	1.7%	4	278	1.4%	7	451	1.6%
1984	2	50	4.0%	5	121	4.1%	7	171	4.1%
1985	1	37	2.7%	6	149	4.0%	7	186	3.8%
1986	3	77	3.9%	21	316	6.6%	24	393	6.1%
1987	1	59	1.7%	23	226	10.2%	24	285	8.4%

Table 24 (May 18, 2022)**Long-run Returns on IPOs Categorized by Dual Class Status**

8,775 IPOs from 1980-2020 are used, with returns calculated through the end of December 2021. IPOs with an offer price below \$5.00 per share, unit offers, small best efforts offerings, ADRs, REITs, closed-end funds, natural resource limited partnerships (all of which have dual class structures), banks and S&Ls, and IPOs not listed on CRSP within six months of the offer date are excluded. Buy-and-hold returns are calculated from the first close until the earlier of the three-year anniversary or the delisting date (Dec. 31 of 2021 for IPOs from 2019 and 2020). Market-adjusted returns use the CRSP value-weighted index. Style adjustments use firms matched by market cap and book-to-market ratio with at least five years of CRSP listing and no follow-on equity issues in the prior five years. All returns include dividends and capital gains, including the index returns. Firms with three or more classes of shares are classified as dual class. Firms with pre-IPO convertible preferred that converted into common at the time of the IPO are classified based on the *pro forma* (post-conversion) share structure.

Panel A: IPOs from 1980-2020 categorized by dual class status

Dual class or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
Dual class	777	17.7%	45.0%	6.0%	3.8%
Single class	7,998	18.5%	21.6%	-19.4%	-7.9%
1980-2020	8,775	18.4%	23.7%	-17.2%	-6.8%

Panel B: IPOs from 1980-2020 categorized by dual class and tech status

Buyout-backed or not	Number of IPOs	Average First-day Return	Average 3-year Buy-and-hold Return		
			IPOs	Market-adjusted	Style-adjusted
Tech stocks					
Dual class	240	33.7%	73.7%	41.9%	34.1%
Single class	2,941	31.0%	22.8%	-13.0%	-0.6%
All tech stocks	3,181	31.2%	26.6%	-8.8%	2.1%
Non-tech stocks					
Dual class	537	10.5%	32.2%	-10.1%	-9.7%
Single class	5,057	11.2%	21.0%	-23.2%	-12.1%
All non-tech stocks	5,594	11.1%	22.0%	-22.0%	-11.9%

Figure 1

IPO Turnover Categorized by Time Period and First-Day Return, 1983-2018

Turnover is calculated as the CRSP-reported first day volume divided by the number of shares issued (global issuance, excluding over allotment options). Nasdaq volume numbers are divided by 2 for 1983-January 2001, by 1.8 for the rest of 2001, and by 1.6 for 2002-2003 to make them comparable to Amex and NYSE volume. The four subperiods are 1983-1989, 1990-1998, 1999-2000, and 2001-2018. Returns are the first-day return, measured from the offer price to the closing market price. Closed-end funds, REITs, SPACs, unit offers, all IPOs by foreign firms, and bank and S&L IPOs are excluded. Panel C of Table 3 reports the numbers that are graphed here.

Figure 2: See Table 9 for details.

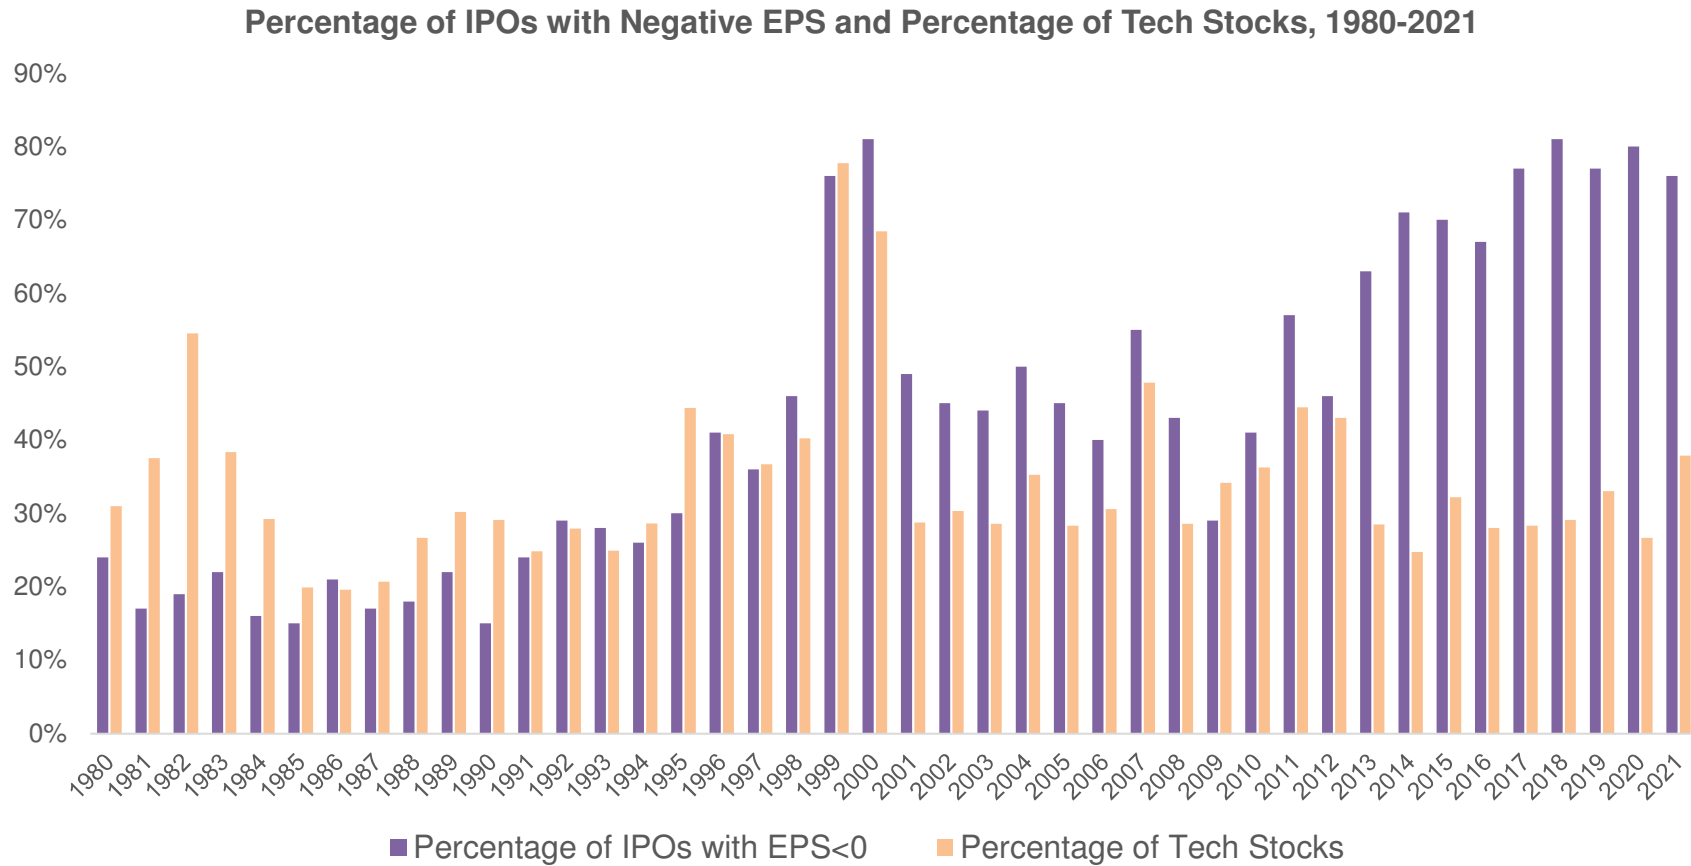

Figure 3

The public float is the number of shares issued in the IPO divided by the post-issue number of shares outstanding in all share classes. See Table 21 for details.

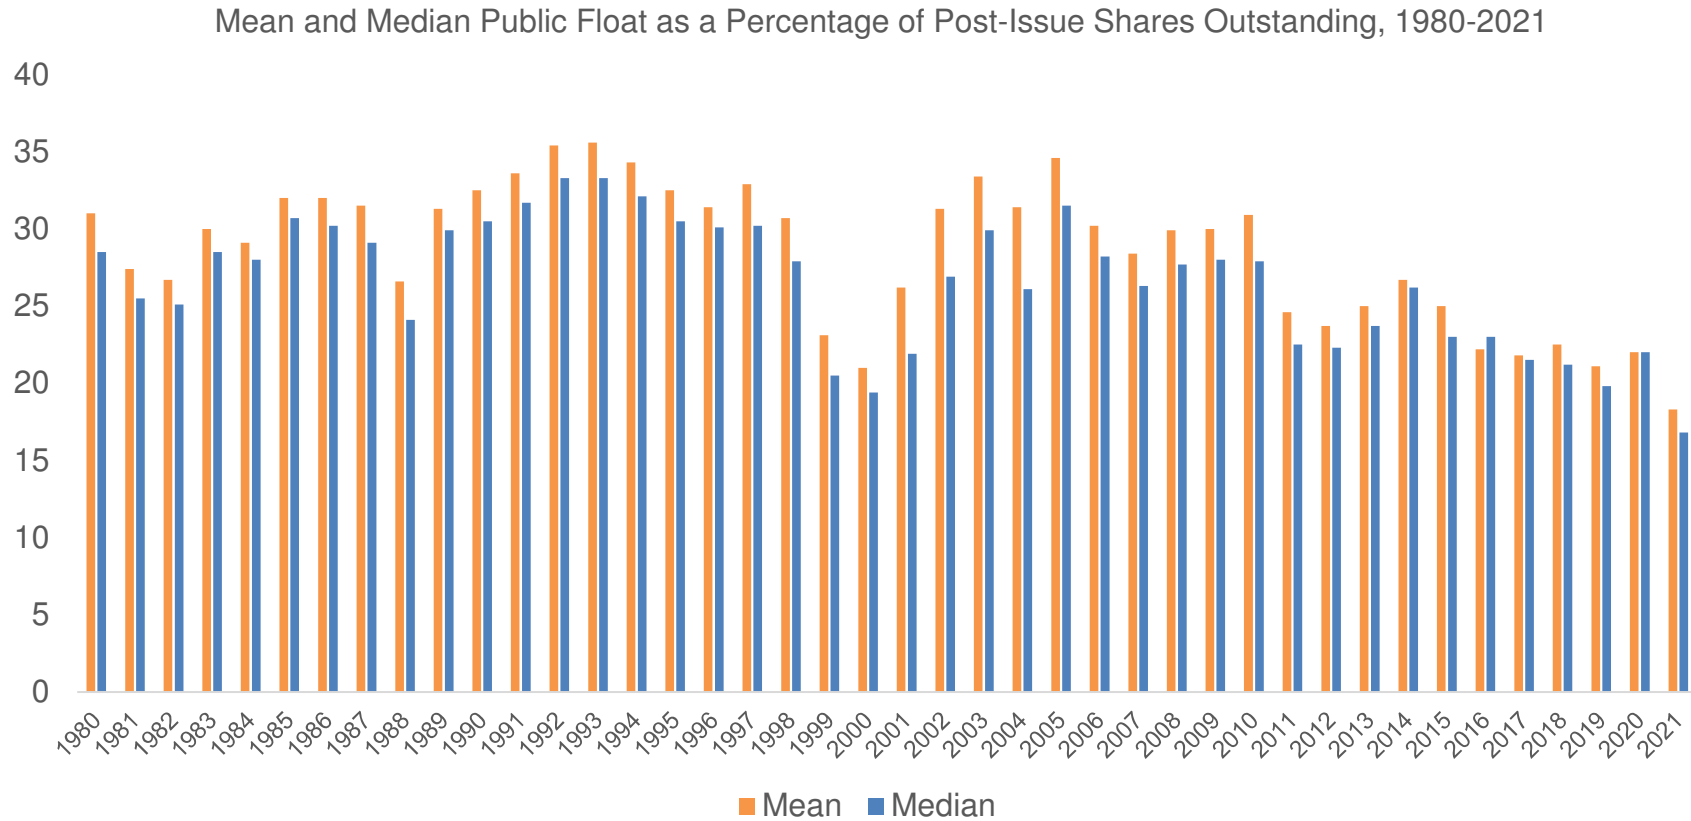

Figure 4: See Table 1 for details.

Average First Day Return and Aggregate Money Left On the Table, 1990-2021

Figure 5: The number of IPOs and average first-day returns per year, 1980-2021

The number of IPOs (bars) and equally weighted average first-day return, by year, for 1980-2021 for operating companies going public with traditional IPOs on major U.S. exchanges (ADRs, penny stocks, etc. are excluded. See Table 1 for details.)

Figure 6: Number and Percentage of U.S. IPOs from Chinese Companies, 1990-2021

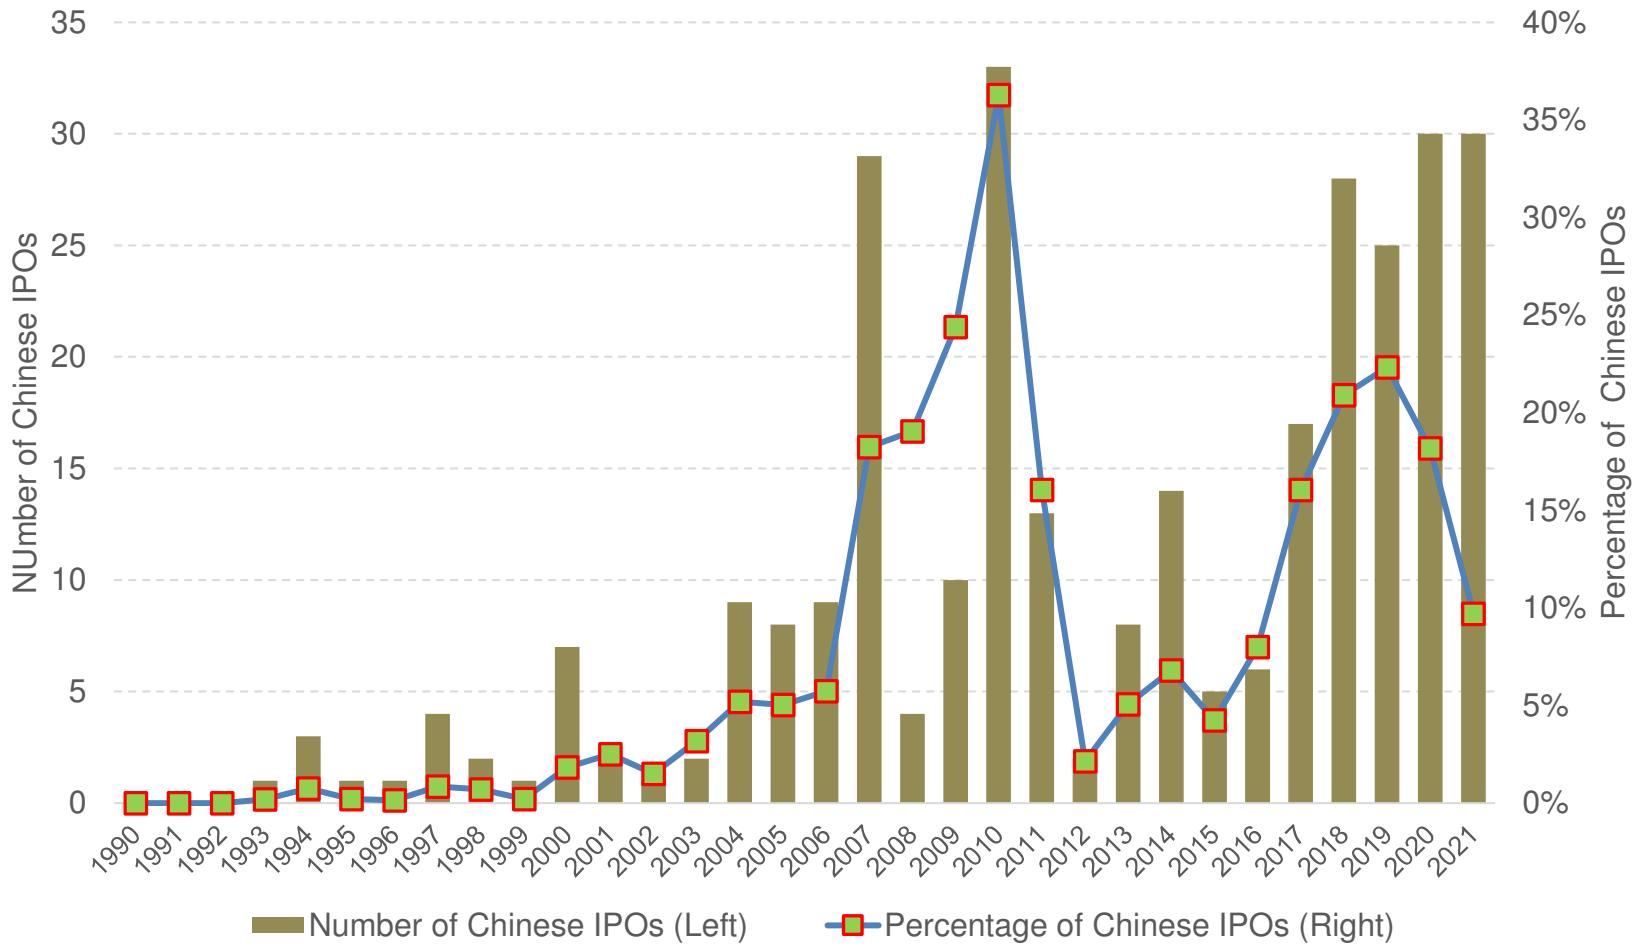

Table 14 gives the numbers plotted here. In this figure, ADRs are included for both the number of Chinese IPOs and the overall number of IPOs.
