

## Quick Start Guide

New to OneNote 2016? Use this guide to learn the basics.

## Access your notes anywhere

What good are notes, plans, and ideas if they're trapped on a hard drive? Keep your notebooks available to you by signing in with your free Microsoft account when you first start OneNote on your PC. There's even a free OneNote app for all of your preferred devices to stay in sync wherever you go.

# Don't worry about saving

OneNote automatically saves all of your changes as you work — so you never have to. Even when you close the app or your PC goes to sleep, your notes are always saved, so you can continue right where you left off. To see when OneNote last synced your changes, select **File > Info > View Sync Status**.

# Never run out of paper

OneNote doesn't have any of the limitations of a traditional paper notebook. When you run out of room, you can just make more.

To create a new page in the current section, select the **(+)** Add Page button at the top of the page tabs column. You can also right-click any page tab and then select **New Page**, or press Ctrl+N on your keyboard.

To create a new section in the current notebook, select the small tab with the plus sign [+] to the right of the section tab bar, or right-click any section tab and then select **New Section**.

When you first launch OneNote, a default notebook with a **Quick Notes** section is created for you, but you can easily create any number of additional notebooks for the subjects and projects you want by selecting **File > New**.

You can create new notebooks on your local hard drive, or you can store them on your free OneDrive account so your notes are always accessible on all your devices. The choice is yours!

### Tag important notes

The Tags gallery on the **Home** tab lets you visually prioritize or categorize selected notes. Tagged notes are marked with icons that prompt you to follow up on your important action items or to check off completed tasks on your to-do lists.

## Create wiki-style hyperlinks

Turn your notebook into a functional wiki by creating links to specific sections or pages. Right-click the tab of the section or page that the link should point to. Next, select **Copy Link to Section** or **Copy Link to Page**, and then paste the link wherever you want it.

# Organize information in tables

Whenever a spreadsheet is overkill, use simple OneNote tables to make sense of information. Start on a new line of text by typing a word, phrase, or number, and then press the Tab key to create the next column. Press Enter to create a new row. Alternately, you can select **Insert > Table** on the ribbon to draw a table.

Once your table is created and selected, use the commands on the **Table Tools** tab on the ribbon, or right-click any part of your table for the same **Table** options.

# Copy text from pictures

OneNote can recognize text in pictures. On any page, insert a picture containing legible text (for example, a cell phone photo of a receipt), right-click the picture, select **Copy Text from Picture**, and then paste the copied text where you want it.

# Share notes with other people

In OneNote, your cloud-based notebooks remain private unless you choose to invite other people to view or edit information in the current notebook. To begin collaborating with others, select **File > Share**, and then choose what you want to do.
