List of Federal ArcGIS Servers
and State ArcGIS Servers
and County ArcGIS Servers
and City ArcGIS Servers
Any Dead Links Are Fixed or Flagged Each Week

See a mistake? Have relevant information to share? Please send me an email via this contact page: https://mappingsupport.com/p2/gissurfer-about-contact.html

Table of contents

This report promotes public access to government data by publishing federal ArcGIS server addresses. State, county and city ArcGIS server addresses are included in this report with the hope that students in middle school and high school will use those local resources to help them learn about and explore geospatial data for their own backyard. As explained below, most of these server addresses were found with simple Google searches.

This report is online as follows:

pdf file   https://mappingsupport.com/p/surf_gis/list-federal-state-county-city-GIS-servers.pdf

txt file   https://mappingsupport.com/p/surf_gis/list-federal-state-county-city-GIS-servers.txt

csv file   https://mappingsupport.com/p/surf_gis/list-federal-state-county-city-GIS-servers.csv   **This is now a master csv file and contains all the active ArcGIS server addresses that are in the PDF file. See next page for details.**

Usually the PDF and TXT files are updated on Wednesday. But sometimes that will not get done until a day or two later. The csv file is automatically produced each Wednesday night. There are few comment lines at the top of the csv file and one of them gives the date of the corresponding PDF file.

Here is the field description for the master csv file. The first row has the column headings you see below.

Line-number	line counter
Type	0 - comment, 1 - federal, 2 - state/county/city, 3 - everything else
State	state name
County	county name
Town	town name
FIPS	FIPS code for county and state
Server-owner	entity name for type 1 and type 3 servers.
ArcGIS-url	
https	Y for https, N for http
Show-contents	Y if table of contents is displayed, otherwise N
SSL	OK if SSL in working order, X if browser complains, blank for http
Open	Y if no credentials required, otherwise N
Comment	any other notes in the PDF file for this server

@ArcGIS server administrators: Thank you to those who have converted from **http to https**. However, too many of you have not yet made this conversion. Do you know that SSL certificates from **https://letsencrypt.org/** cost nothing? And there is a second group of you that has attempted to convert to https but either have not done so correctly or are using SSL certificates that the browsers do not trust or that have expired. Those servers are flagged in this report as having an **SSL problem**. If you would please get new SSL certificates from LetsEncrypt, then this problem will go away. **To test your https implementation**, try browsing to your "rest/services" address and see if an error message appears. Both Chrome and Firefox browsers require TLS 1.2 **protocol**. Way too many of you are still using TLS 1.1.

Why am I doing this? I am a software developer in the field of online maps. One of my projects is **GISsurfer** which is a general purpose web map based on the free open-source Leaflet map API (Application Program Interface). One of the features of GISsurfer is the ability to display ***any*** public-facing (i.e. no login required) ArcGIS MapServer, ImageServer and FeatureServer data.

Personally, I am most interested in GIS data related to disasters (especially wildland fire) and recreation (especially trails). A good place to see examples of GISsurfer disaster and recreation maps is to open GISsurfer and then click "Menu". The choices include "Recreation maps" and "Fire and weather maps".

If you would like to give GISsurfer a try:
1. Open GISsurfer: https://mappingsupport.com/p2/gissurfer.php
2. Zoom in on a state, county or city where you would like to see some GIS data.

3.   Click the basemap button and change the basemap to "USA basemap".
4.   Click the basemap button again and look under the "Overlay" heading (mobile users might need to scroll down). Select "Add GIS overlays".
5.   Use this ArcGIS server list to copy the address for an ArcGIS server for that state, county or city and then paste that address into the GISsurfer dialog box.
6.   Click "Send request to GIS server". After a few seconds, the sidebar will open and display the top of the table of contents for that GIS server.
7.   Click an entry in the table of contents to go down to the next level.
8.   An entry with a checkbox can be displayed on the map as an overlay. **Click that entry to add that GIS data to the map as an overlay.**
9.   Click "Menu" ==> "Link to this map". ==The link that is displayed will replicate the map on your screen.==

For more information please visit the **GISsurfer homepage**. Click the green "Menu" button and then select "**Help**". Scroll down just a bit and start by reading the **"Overview"** section.

==Automated weekly scan:== Once a week my code automatically tests each link in this report. Each link is tested at least 3 times spread over a several hours. Bad links will promptly be fixed or flagged. If the address is not working at all then it will be rendered unclickable and marked **"dead link 1"**.   In many cases that government entity still has an ArcGIS server but has simply changed the address and/or configured their server for internal use only. Every few months I will check the jurisdictions that are flagged "dead link 1". In many cases I will be able to find a new ArcGIS server address to add to this list. If I cannot find a new server address then that entry will be marked **"dead link 2"**. From time to time those entries will be deleted from the list.

When the weekly scan
Each GIS server link will also be tested to detect (1) if directory services (i.e. table of contents) has been disabled and (2) whether login credentials are required. This automated weekly code will also test each http link to see if there is now a https version. This report will be updated with any such new information. **Usually an updated list will be posted each Wednesday morning**.

==Tip:== Sometimes a link that is flagged as 'dead' is only down temporarily. If you think such a link might have data you would like to see, you can always replace the leading underline character with the letter "h" and give the link a try.

==Tip:== If you are looking for a certain type of data, try a Google advanced search. For example, if you are looking for trail data then search on:
       trails site:_____
Replace the underline with the address for an ArcGIS server and enter that search into a browser bar.

==See any mistakes?== Some of the servers in this list have multiple jurisdictions and from one entry to the next they jump between states/counties/cities. No doubt I became mesmerized a time or two by the repetition involved and entered some server addresses under the wrong state. Or I

may have entered a city server's address in the section for county servers or vice versa. I cannot fix it unless someone tells me I goofed.

Why are the multiple entries for some counties/cities? The focus of this list is to present links that go directly to data for a state agency or county or city/town/village. Some of the servers on this list have data for multiple jurisdictions. It would have been nice if the server administrator had made a **folder for each jurisdiction** and then put all the data for that jurisdiction into that folder. Unfortunately, sometimes that did not happen.

Data 'Portals': Yes, this report does include some addresses for federal and state data portals. No, publishing portal addresses is not the primary purpose of this report.

Want to help #1? If you know of a federal, state, regional, county or city **ArcGIS server** that is not already listed below and that includes at least some data where no login credentials are required, please send me an email via the contact link posted above. ==Note that I am only looking for the **'top' endpoint for ArcGIS servers**. Those links all end in **"rest/services"**.== I would particularly like to get addresses for more ArcGIS servers operated by regional planning bodies.

Want to help #2? Each state has a section for links to county ArcGIS servers and then a section for links to city ArcGIS servers. Find your state and see if it looks like I listed any city servers in the county section or vice versa.

Want to help #3? Some counties and cities have agreed to cooperate and have data layers for both jurisdictions on a single server. When that happens I want to show both the city name and county name in this list along with a pointer to whichever one is hosting the combined data. If you know of any such ArcGIS servers, please send me an email via my contact page. Go to https://mappingsupport.com, click the big green "Menu" button and select "About and contact".

Want to help #4? See the section "USA Miscellaneous Servers" near the start of the list. If you can identify any of those links as primarily having data for one state or one county or one city, please let me know and I will move that server link to the appropriate location.

Caution: Some of the GIS data on these servers will be draft and/or temporary. Also the server administrators sometimes renumber the data layers with little to no warning. This will break any maps that are based on the former layer numbers. Another common problem is the use of **gibberish names** to identify data folders/layers/attributes combined with the lack of metadata to translate that gibberish into something useful. And when you want to ask a question about the data usually the GIS server metadata lacks any contact information.

Anyone can easily search for ArcGIS servers. Assume you want to know if St. Louis County Minnesota (County seat is Duluth) has a public-facing ArcGIS server. **First**, find the county website. Note that the website address includes "stlouiscountymn". **Second**, do a Google search on: stlouiscountymn "rest/services". Include the quotes in your search. If this county has a GIS server then you will likely see search hits to various places within the table of contents. Open any table of contents page and then in the upper left corner click on **"Home"**. You now will see

the 'top' of the table of contents for this ArcGIS server and the browser address bar will display an **address that ends in "/rest/services"**.

Of course at the county and city level you could simply call or email the GIS staff and ask. Here is one way to phrase the question: "Do you have a public-facing ArcGIS server and, if so, what is the rest service endpoint?"

Sometimes you might see two server addresses that appear identical except one of them says "arcgis" and the other says "ArcGIS". Technically these are different internet addresses and these two servers may or may not contain the same information.

Tip: If you are interested in a topic instead of a state/county/city then try a Google search like this example: "climate change" "rest/services". Include keywords for your topic and always include rest/services in quotes. Many of the hits that are returned will point you to ArcGIS layers.

Data.gov and **GeoPlatform:** These two websites can also help you find federal GIS servers. Enter your search criteria and then in the left sidebar find the "Format" section and select "ESRI Rest". The hits will be for ArcGIS layers. In other words, these two sites index the **'bottom'** of a GIS server table of contents. By contrast, this PDF report shows you the **'top'** of the table of contents for GIS servers. One advantage of these two sites is that you may find metadata that is not present when you look at the GIS server page for the same data. **Caution:** Many (most?) of the GIS layers on the various federal servers have **not** been submitted by the server administrators for inclusion on data.gov or geoplatform.

Geodatadownloader: Do you want to download ArcGIS data? Here is a tool to help you. The link points to the GitHub 'Read me' file. Here is a **related thread** on Reddit.

GeoSeer is a search engine for finding data served through WMS, WFS, WCS, and WMTS services. It allows users to easily find publicly available datasets which they can then use in their own projects using normal GIS tools. At the time of writing GeoSeer has over 1.2 million distinct spatial layers in its index from over 160,000 services. This is a worldwide search tool. **Note:** GeoSeer does not index ArcGIS ESRI Rest data (the ArcGIS Server default). It only indexes data that are available via any of the four standards listed above - all of which ArcGIS Server is capable of serving - but none of which are the default.

If you are looking for government GIS **portals** instead of GIS servers, then here is a list of portal addresses from a volunteer that wishes to remain anonymous. The links in this list will take you to maps produced by the governmental unit.
https://transparentgov.net/cleargov1/777/arcgis-online-10820-entrance-2

http v. https: If you find a GIS server that is not on this list and that starts with http:// then change the link to http**s**:// and see if that works. If so then you should use the https version of the server link.

Table of contents disabled: This comment by a server address means that the server administrator has turned off the table of contents. If you click that link then the server will display an error message that says **"Services Directory has been disabled."** Even if a server does in fact have a few data layers that truly are sensitive and should not be available to the public, that is not a good reason for turning off the entire table of contents. There is nothing sensitive about the location of parks, fire stations, roads and the vast majority of other data that is hosted on GIS servers.

Login required v. public-facing: A small number a ArcGIS servers on this list require a login in order to access any data. That type of restriction is noted in the list. Fortunately the great majority of government GIS servers are public-facing - i.e. no login is required.

Are you looking for maps instead of just data? I expect that most government entities that have a GIS server also have produced some maps anyone can look at. Just go to the website for that city, county or other government entity and search their site for maps. If that does not work then you might look for a link to the GIS or planning department. Maps that are produced by GIS staff often include explanations about the data along with supporting information such as a contact link for questions.

Are you a GIS server administrator?

> **First**, hopefully you are in favor of **public access to data** and will not take any action to make it hard/impossible for people to view the data your server is hosting. And if you have disabled the 'services directory' (i.e. table of contents) please consider turning that back on. Yes, if you allow the public to browse the services directory there is at least a theoretical security risk in the form of cross site scripting attacks (XSS). But if this was actually a significant threat then it would be a common practice for server administrators to disable the services directory and that is simply not happening.

> **Second**, if your server is still using http then notice that the great majority of servers in this report are using http**s**. This is in keeping with the philosophy promoted by Google and others to 'encrypt everything'. You can get free SSL certificates from https://letsencrypt.org/. I use this service for the domains that I own.

> **Third**, if you make a significant change to your server that affects (for better or worse) the public's ability to view the data on your server, please send me an email and I will update this list.

> **Fourth**, are you using **gibberish** for the names of the folders, services, layers and attribute data on your server? Are you using names like PG instead of Playgrounds? What good public purpose is served by **obfuscating** the data your server is hosting by using gibberish names instead of plain-speak? **ESRI does not charge by the letter!**

> **Fifth**, is there data on your server that might endanger public safety if that data was publicly available? If so, then consider placing that data in a **folder that requires login**

6

credentials. By doing that, most of the data on the server could continue to be publically available while the truly sensitive data would be protected behind a login requirement.

Credits
Thanks to Jonathan at **GeoSeer** (https://www.geoseer.net/) for sharing over 200(!) ArcGIS server addresses. The GeoSeer site is a great complement to this list of server addresses. **GeoSeer indexes individual GIS data layers** and provides a way for anyone to freely search their database for GIS data. GeoSeer builds its database with code that scans GIS servers that are based on WMS, WMTS, WFS, WCS and ArcGIS.

Thanks also to everyone else that has sent me addresses for ArcGIS REST services. All things considered, I decided that the best course of action is to not credit anyone by name unless you give me permission to do so. So if you contributed and would like to be credited, please drop me an email via my contact page: https://mappingsupport.com/p2/gissurfer-about-contact.html

1.   READ ME June 2, 2021

The servers listed in this section each support many different jurisdictions. Each server will either display the table of contents for all of the jurisdictions it is hosting or the server will not display any of those table of contents. Alas, some of these servers have changed this setting back and forth more than once. I am no longer going to take the time to update this list with those changes. If you are looking for data on any of the following servers simply try one of the links to see whether or not the table of contents is displayed.

http://74.93.16.209:6080/arcgis/rest/services
https://gis2.gisworkshop.com/arcgis/rest/services
https://gis3.gisworkshop.com/arcgis/rest/services
https://gis2.gworks.com/arcgis/rest/services
https://gis3.gworks.com/arcgis/rest/services   Added July 14, 2021
https://ng911.rsdigital.com/arcgis/rest/services

For servers that do not host many different jurisdictions, this list will continue to be updated to show whether or not those servers display the table of contents.

2.   Donate to help fund this work

The report you are looking at has taken days and days of effort to compile. Time is spent each week to maintain and update the list. And there certainly are additional government ArcGIS servers waiting to be discovered and added to this list. If you find this list of server addresses to be useful please consider making a donation to help fund this work.

If you know of any grant programs that might be interested in funding this work, please use the 'contact' link at the top of this report and send me that information.

Here is a link for the GISsurfer donate page. You can always include a short note indicating that you are donating to help fund the ArcGIS server list.

Florida County GIS Servers

As of 1-1-2020 all Florida counties have been checked for a public-facing GIS server. All counties not listed below fall into one of the following categories.

1.   County GIS is hosted on some other kind of GIS server (not ArcGIS and not WMS) that cannot be accessed directly by GISsurfer.
2.   County has no GIS.

Michigan County GIS Servers

As of 12-30-2019 all Michigan counties have been checked for a public-facing GIS server. All counties not listed below fall into one of the following categories.
1.   County GIS is hosted on a WMS server that is hidden behind a proxy and therefore cannot be accessed directly by GISsurfer.
2.   County GIS is hosted on some other kind of GIS server that cannot be accessed directly by GISsurfer. Most of these have just a few layers of data which are related to parcels.
3.   County has no GIS.

Allegan	https://gis.allegancounty.org/gis/rest/services
Antrim	Apparently no public ArcGIS or WMS data

Nebraska County GIS Servers

Special note: Unfortunately the ArcGIS servers at **gis3.gworks** (counties and cities) and **gis2.gworks** (counties) do *not* use a **folder** for each jurisdiction. As a result, the top of the table of contents for these servers have multiple entries for each county and city. IMHO, this is a **goofy** way to organize data on a server.

Counties: This county section includes one or two links for each county on these two servers. Not all county links are shown below since there is a greeat deal of duplication in the layers within each folder.

Adams	https://gis.adamscounty.org/arcgis/rest/services

Wisconsin County GIS Servers

As of 12-30-2019 all Wisconsin counties have been checked for a public-facing GIS server. All
counties not listed below fall into one of the following categories.
1.   County ArcGIS server is not public-facing. Login credentials are required.
2.   County GIS is hosted on some other kind of GIS server (not ArcGIS and not WMS) that
        cannot be accessed directly by GISsurfer.
3.   County has no GIS.

Some counties that do not have an ArcGIS server do have a WMS server. However, usually
those WMS servers just have a few data layers and most of those layers are aerial photos.

12. COVID-19 GIS layers covering the USA

These are the ArcGIS MapServer and FeatureServer layers I have found that (1) are COVID-19 related and (2) cover the USA. If you know of any other MapServer and FeatureServer layers that **meet both criteria** please share them with me and I will include them here.

You can see these layers in the COVID-19 map I produce. If you need help using this map or are looking for the legend, please click "Map tips" in the upper left corner.

Open GISsurfer COVID-19 map:
https://mappingsupport.com/p2/gissurfer.php?center=37.157050,-96.328125&zoom=4&basemap=USA_basemap&overlay=County_boundaries,COVID-19_cases_by_county&txtfile=https://mappingsupport.com/p2/disaster/coronavirus/john_hopkins.txt

* COVID-19 cases and deaths by county
Data covers the USA. Curated by Johns Hopkins University.
https://services1.arcgis.com/0MSEUqKaxRlEPj5g/arcgis/rest/services/ncov_cases_US/FeatureServer

* COVID-19 cases and deaths by state/province/country
By state for the USA. By Province for Canada. By country elsewhere. Curated by Johns Hopkins University.
https://services1.arcgis.com/0MSEUqKaxRlEPj5g/ArcGIS/rest/services/Coronavirus_2019_nCoV_Cases/FeatureServer

* COVID Social distancing

How good or bad each USA county is doing. Produced by Unacast.
